While I am not a contester or DXer, I see no harm in collecting
numbers. What harm is there in giving someone a number if that's all
that he wants?

>Can it be than idiots can pick up a paddle?

I think that there are likely just as many idiot hams on CW as there
are on phone. Thankfully the mode makes it difficult to act like one
when your using it... :-)

I said that I think that most hams of the *50's* could fix their own
gear. Things had somewhat changed by the 80's. I've never seen the
inside of an Omni D, but if it is non-digital and has discrete
components, I think that I could probably fix about anything that
would go wrong with it. Am I the average ham...

Far more logical than anything claimed as a justification
as to why ONLY hams should be required to have
such knowledge.

>be a secondary problem for him these days..

Has anyone, other than some hams, made any complaint
regarding the technical ability of hams today? That is
clearly a non-issue for the FCC and other non-ham folks.
In contrast, the garbage that some hams spout on the
air can be heard by anyone. I applaud Riley's
efforts because there's certainly nothing that Riley
would be involved in regarding the techhnical issues.

> inference on the Speroni tabulation of Renewed licenses.

It's easy to figure them out, though.

The AH0A site lists renewals by class. Looking at those results, we see
Tech Plus renewals at the rate of several hundred per month, and Tech
renewals at the rate of 1 or two per month until April, 2000. Then, in
April 2000, the number of Tech and Tech plus renewals is almost equal
(339 Tech Plus vs. 332 Tech). In May 200, the trend reverses - Tech
renewals suddenly jump to several hundred per month, and Tech plus drop

to a few per month.

It's clear what happened: On April 15, the FCC started renewing Tech Pluses as Techs.

Last time I looked, the FCC would not renew a ham license unless it was within 90 days of expiring. Since the Tech lost its code test on Feb 14, 2001, no Technicians were eligible for renewal until Nov 16, 2000 (90 days before Feb 14, 2001).

So ALL renewals of Tech or Tech Plus from April to October 2000 are Tech Plus renewals. The renewals of November and December 2000 are a mixture of Tech and Tech Plus renewals.

The total number of Tech Plus to Tech renewals from mid April 2000 to October 2000 is 3303. That number represents a lower bound on the number of Tech Pluses that the FCC renewed as Techs during the time you cited. The actual number is higher because of additional Tech Plus to Tech renewals in November and December of 2000.
>
> I did as stated, taking the overall monthly numbers of licensees in
> each class, separating code-tested from non-code-tested..

No, you did not. You equated "Technician license" with "non-code-tested licensee". The two are NOT equivalent, as has been demonstrated.

There are at least 3303 Technicians who are code tested because they are renewals from Tech Plus, as the above analysis proves. The actual number is much higher because November and December of 2000 are left out of the total. In addition, there are an unknown number of Technicians who have passed the code test but who had not upgraded during the cited time period because they hadn't passed the written yet.

End result is that you miscategorized several thousand code-tested licensees as non-code-tested, even though the data to properly categorize them was readily available from the same source.
>
> I could have gone into an extensive "analysis" by including
> numbers of Expirations of licenses (also tabulated) and doing
> all sorts of second-guessing on the "why" of such. I did not.

No, that wasn't necessary at all. The information needed is on the renewals page.

And we haven't even mentioned vanity call renewals, which are shown separately.
>
> The FCC renewal shift of Tech-Plus to Tech would put such
> Tech-Plus licensees in the CODE-TESTED group, would it
> not?

Nope. See above. FCC expects Tech Pluses who renew to keep some sort of record that they are code-tested on their own. An old license is

adequate.

> The old Technician-Plus class required a code test for a
> license.

True.

> In order to separate code-tested from non-code-tested,
> I made an additional posting regarding the 27 months between
> the start of 1998 and the end of March 2000.

Which has no effect on the errors in your analysis of the period
following the restructuring.

> That additional
> listing excluded any "renewal" shifts from Tech-Plus to Tech.

There were no such shifts before April 15, 2000.

> The results are still the same -
>
> The total number of code-tested US ARS licensees is decreasing.
> The number of non-code-tested US ARS licensees is increasing.
> It has been that way for over three years..

Nobody questions that. The probelm is that you unnecessarily misstate
both the increase in "non-code-tested" and the decrease in "code-
tested" by a very significant percentage.
>
> <snip>
>
> >End result is that your numbers are way off.
>
> No.

Yes, they are way off.

> I am not ASSUMING anything about "renewals" or expirations
> or anything else,

Yes, you are. You are assuming that ALL Technicians are "noncodetested"
even though it is clear that thousands of them ARE "codetested".

> just showing the totals of code-tested versus
> non-code-tested over the last two-plus years plus the number of
> NEW licensees, code-tested versus non-code-tested.

The original numbers posted were derived from the totals, not from new
licenses.
>
> If you start assuming some condition, your "analysis" changes
> to mere SPECULATION.

Not at all. Every analysis assumes some conditions. You assume that the
Speroni data is correct, even though AH0A himself says it contains

anomalies. You assume that "Technician" always equals "noncodetested" even though plenty of proof exists to the contrary in thousands of cases.

> That is no longer any valid analysis.

Estimating is a valid analysis tool.
>
> >How do you know? What is faulty in my estimate? I clearly
> >said "SUPPOSE" - that makes it hypothetical.

I'm not saying everything is faulty. Just some of your methods.
>
> >The number of new Technician licenses proves one thing: Most people
> >starting out in ham radio do so by getting a Technician license.
>
> How do you KNOW that?

Simple: Most new licenses are granted to new hams. Most new licenses are Techncian licenses.

> All I see is the number of licenses granted
> for particular classes.

Sure. Just look at the "new licenses" page on the AH0A site. It's right there.

> Aren't there any "Extra-out-of-the-box"
> licensees? Aren't there any "General-out-of-the-box" licensees?

Sure - plenty of them. See the above page. But the most new licenses are Technicians. Nobody disputes that.
>
> >The
> >data does not tell how many of those new licensees later upgrade,
> >because upgrades are lumped into "modifications".
>
> None of the publicly-available FCC databases predicts the future.

It's not the future that is in question. It's how many upgrades have occurred in a given time period. The Speroni site doesn't say.
>
> Can you predict the future? I can't.

I can make reasonable predictions based on past information and
experience.

>I don't have crystal balls.

I have no idea what that is supposed to mean.

Then you ARE predicting the future when you make statements like the
one above.

> One plots past data and gets a
> "curve" which may be a sort-of-straight line or something that is
> curved. That estimate may be continued into the NEAR future for
> a few months with some element of certainty.

Unless the conditions change in that time period. Like the fact that
the first post-Feb-14-1991 Technician licenses will start to expire
very soon.
>
> It is better than picking fly droppings out of pepper to get the
> number of Tech-Plusses renewed as Techs,

I have no idea what that is supposed to mean. The numbers are right on
the Speroni site. You ignored them - I didn't.

> the number of
> Advanceds that were dropped to a lower grade for any reason,

I know of no loss of amateur license grade as part of FCC rules for the
past 50 years except for the renewals of Tech Pluses as Techs since
April 15, 2001. Do you have any such information?

> or any number of "modifications."

Those are on the Speroni site, too.

> You can go to great lengths
> to attempt "proving" something in the multi-tiered US amateur

Yep. Always looking to learn more, though.

> Presumably there is some certificate or
> diploma attesting to such ability?

Yep - got a couple of them.

> I'd still call it a plain GUESS and lump it under speculation.

Why? I have shown the exact methodology and used the same source. 3303
is a clear, absolute lower bound on the number of "codetested"
Techncians.
>
> >By ignoring the fact that no Technician licenses have expired yet,
your

No. It's more accurate, period.

> It is "more accurate" because you said so. :-)

No, it's more accurate because the method takes into account relevant
data that your method ignores. The errors introduced by your methods
and assumptions are significant.
>
> >It was identified as a "suppose". You ignored the whole expiration
> >thing completely. My analysis is more correct because the relevant

No. You said "non-code-tested" LICENSEES. Not the same thing as
LICENSES. If it was one time, I'd mark it up to a typo, but it was
repeated.

And the current Technician DOES provide for code testing. A ham who
gets a Tech and then passes the code test has Novice/Tech Plus HF
privileges.
>
> >I'm not denying any trends. I'm just stating the facts and pointing

There is a difference between a database error and a change in license
class that is part of the regs.

> As I have suggested before, go download
> your own database files and do searching for whatever data you
> want to "prove" something. They are ASCII files and searchable
> with a text-based search program.

I'm not trying to "prove" anything, Len. Just pointing out some
avoidable errors in your posts. Is that wrong?

>

> Are you absolutely SURE of the first sentence above?

As sure as I am of anything related to the subject.

> After all,
> the FCC is renewing Tech-Plusses who don't re-test on renewal
> as Technicians,

That's correct. Read the regs and look at the Speroni data. Ask any Tech Plus who renewed after April 15, 2000.

> and "many" of the existing Techs will drop out,

That's not what I wrote. 5% per year is not "many" - it's one in 20.

> and aliens might invade the earth to be repulsed by morse code.

Never claimed that at all. What IS your problem with Morse code, Len?

> Or at least repulsed by long-time morsemen who will fight
> change (of any kind) to a moral, mortal end. :-)

I have no idea what that is supposed to mean.

The whole code-test thing is a dead issue. FCC reduced the code test for a US ham license to the absolute bare minimum under the treaty back in April. Their comments, and their actions for the past 20+ years make it clear that the treaty is the only reason they kept 5 wpm testing. Unless FCC decides to ignore the treaty, no more reduction will occur until the treaty changes.

Sure I'm "pro-code". I like the mode - for me and many other hams, it's lots of fun, efficient, effective, and has lots of good features. Is there something wrong with that?

What defines "arrogance", Brian. In what way do you perceive me as
arrogant? Is it because I don't share your beliefs or have disagreed
with you?

You've left out an important word prior to the words "other hams". The
word is "some". I give as I get generally. I think most people do.
I'm certain that you do not like or get along with everyone you meet in
life. Why should amateur radio be any different? I get along with most
people and like many people. I avoid some people and simply detest
others. Is it somehow different with you?

>
> Jim Kelley thinks I have nothing to say, you say I speak "volumes." Why
> don't you two huddle, then get back to me. I'm almost curious which way
> you'll decide.

If you have anything important to say, I don't think you've yet said it. I'm not Jim Kelley so you'll have wait for his reaction. My own opinion is that the chip I told you that you have on your shoulder has once again made an appearance. If you feel like the bastard child at the family reunion, do some self examination.

That idea was made into an aftermarket kit by another company. Funny that Heath
didn't pick up on it and sell a triband HW-?2

>on
>>AM easily and cheaply.
>
>I'll agree that AM was cheaper (using used old used gear). I was just
>saying that SSB didn't have to be all that expensive...

Sure - if you knew what you were doing and were willing to go whole-hog. But
one of the real virtues of the old technologies and license structure was the

incremental approach.

First, a prospective ham got a shortwave receiver and strung up some sort of antenna. Using that setup, the newcomer learned the code and got a feel for amateur procedures, propagation, and stuff like that. If the receiver was homemade or converted surplus, the newcomer learned some theory and practical skills in the process of building/converting it.

Once the new ham passed the Novice exam, it was time to set up a transmitter and T/R system, as well as an antenna that could transmit if that hadn't been doen already. There was a wait of many weeks between passing the tests and getting the license, too. The transmitter was usually quite simple because the Novice privileges were so limited.

When the Novice upgraded, he/she could take advantage of the new privileges by adding a VFO and possibly a modulator to the transmitter.

Improvements could be done incrementally at any time - better receiver, more powerful transmitter, etc. Sure, the gear was big and clunky and basic, but the new ham had a chance of understanding how it worked and in many cases had built or converted all or much of it, learning a lot in the process.

The SSB transceiver era changed all that.

>got
>
>Remember the old Heathkit DX35 and it's "controlled carrier" (screen)
>modulation? I think it measured in the neighborhood of 25 watts AM.
>That really didn't cut it...

Actually it was more on the order of 10-15 watts carrier output on a good day. The DX-40 and DX-60 used the same system. I had a DX-20 for a time, then a Viking Adventurer, plus various homebrew and surplus rigs. Learned a lot from each one. Knew every wire and component in them by the time I sold or traded them away.
>
>>$4 was not a small fee in 1963. Many newcomers were teenagers, and the

>>wage was maybe $1. So we're talking 4-5 hours minimum wage to take the test,
>>pass or fail. What's 4-5 hours of minimum wage today? More than $20.
>
>Do you really think that $20 would stop a teenager today from becoming
>a ham if that's what he wanted?

It would slow some of them down, particularly if the price was formerly $0. And if the test was not passed, it was "come back in 31 days and try again. Bring another $4, too."

>Have you priced some of the teenage toys these days...

I'm not there yet...
>
>BTW I was making $88.25 a week at Motorola in 1963 with a wife and
>soon to be kid. That $112 for the SSB rig was hard to cough up, but
>heck what's more important anyway... :-)

There ya go. You paid 127% of a week's wages for that thing. How much would
that be in today's money?
>
>>how many hams do you think went to Woodstock?
>
>Dunno. But I think the Woodstock populace might be an improvement over
>some of the characters I see at the ham swapmeets here... :-)

I'm not sure what you mean. One thing I know about the hamfest crowds - they
are NOT necessarily a cross-section of th ham population. Many of us have other
obligations on a Sunday morning.

Most of the reasons I cited were not of my own creation. They came from a 1963
QST editorial.
>
>>Some folks moaned back then that "ham radio was dying" because

Try writing them a nice letter stating, due to diminished mental ability resulting in your involuntary commitment to a state mental hospital, that you are no longer able to function as a reasoning amateur radio operator, so would they please cancel your membership and return any refund so you can pay for the electro-shock treatments. I'm sure the League will be very understanding.

>Lucky for me I grew up in a country where BRAVE MEN decided to break some
>laws in the year 1776!

Well, Ken, some time ago on rec.radio.cb, someone was encouraging the "gang" to use a particular group of HF frequencies for their free-banding. I thought the list of frequencies looked familiar, then it struck me that he had listed the trans-Pacific and trans-Atlantic HF air-to-ground channels that Aeronautical Radio, Inc., uses to track long-range commercial airline passenger flights. When I pointed that out to him, explaining that he could possibly be endangering lives by encouraging HF free-banders to utilize those frequencies, I was flamed to a crisp.

Break whatever laws you desire, but in doing so, don't infringe upon other people's welfare and well-being.

If the only way he can make his point is by using a technically unfair
comparison, I don't believe he has made it very well.

>That means that CW is the less robust mode? When you can clearly copy a
>CW signal at levels where SSB voice is totally unintelligible?

Then why the objection to sharing spectrum space with SSB signals?

>Fellow, you're beginning to sound like this is getting to you, you're
>losing your technical edge. Why?

I believe that OOK CW is more "robust" than SSB, but was noting that saying
that a CW signal cannot be copied in the presence of an SSB signal is saying
that it is not. I don;t know why some feel they need to tear down the value of
CW in
order to "save" it.

Does Squiggy have a name, or is it that you find it easier to imagine
him dead if he had a cartoon name and an apple in his mouth?

Dave, you'll notice that "Good Op" and friend, Hans Brakob, K0HB, did three minutes of -sleuthing- and came up with Steve's employment information.

Is Hans also an aging cyber-stalker?

What's peculiar is your fixation with the imagined transgressions of only certain (as in SOME) members of this group, and the others (as in SOME) receive a free pass.

In article <3a861468.186914703@news2.dvol.com>, kelly@dvol says...

>Squiggy doesn't have a fist, he couldn't communicate with dots &
>dashes if his life or anybody else's life depended on that ability

Actually, at one point, Carl was approaching 20 wpm. He could certainly manage a code QSO today, though he has not accepted my invite to do so.

Maybe I will have to be him a lobster dinner that he can't. :-)

>he advocates elimination of all subands,

The US is one of few countries that has actual sub-band allocations; they sort themselves out by band plan. His basic recommendation is that the rules say "these are your bands; stay within them." Unfortunately, what works in some countries would possibly not work in the US. On 160 M, for example, the band plan for CW operation is regularly stomped on by phone operators, some who know better; some who do not. I think the same mentality that drives the Know Code = no Ham spams would show up with a small, but very noisy, group, who could make it rapidly unworkable. Why, even our Cecil wanted to engage someone in a 5 wpm QSO in the DX windows, just because he can.

>he advocates the use or wideband
>digital modes on the HF ham bands

I think that some FHSS needs to be permitted on HF. He wants to give it carte blanche, however. Is there room for it on 80 M? How about 160M? How about 30M, where some commercial stations could be already using it? How about 10 M?

>and he goes off on anti-cw rants at
>neighborhood ham club meetings

He has said here a number of times that he doesn't believe that CW use should be abolished at all. Does he say different things at club meetings? He may be swept up in the easy trap of having to tear something down completely in order to justify change. There are some here who say some pretty bad things about CW to justify keeping it.

Dick, there are tools that are readily available today that let ordinary individuals do things that engineers of old found difficult. I can predict quite accurately the performance of a multi-element Yagi antenna with a few minutes programming. I can optimize that antenna in another few minutes for maximum forward gain, F/B, feed-point Z or any combination thereof. I can predict the propagation between W1 and central India using another free software program, or can design an amplifier using free design software.

I disagree that it was much easier to do these things in 1963.

>point ot view to so many techies?

It is not an obscure point of view to me, Dick. I believe that Morse code CW use should be permitted on the ham bands. I believ that the "most universally available, easily implemented mode" will continue to be a valuable asset to Amateur Radio, irrespective of whether it it tested. I think it illogical to assume that the "most valuable" of all modes will not be used by hams unless they are required to learn it to get a license.

>Agenda time again?

Oops, now I am confused again. There is that "Agenda" thing.

>> about 2 or 3 hours a day on the phone, answering their questions.
>> Most of them don't share your "can't do" viewpoint.

>I sereiously doubt it. You meet and converse with seek out your
>services and those of ARRL.

Are you really offering that those that call me on the phone do so because they believe they "can't do" whatever it is they are asking me about? I fail to understand that logic, Dick.

Secondly, please forgive me for not also explaining that my contact with hams also includes a lot of travel to conventions, and local club meetings. During that travel, I not only talk to a lot of hams, but I wander around a bit and look at what is going on. I do not see evidence of "they won't learn anything more than what is on the test" as you describe. That is "can't do" and what I see is people doing the doing.

When I go to a local club meeting, generally only the club program director has sought me out. The other 30 people are just there. In what way do you think they are different than the hams that you know? How could I possibly see so much hope and enthusiasm in hams, yet you see none?

> For every one you contact there are many thousands you never know
> about. No one I know personally has had contact with you.

Of the 50 or so people that show up regularly here, about 5 have had personal dealings with me.

But you may be right. Tell me about the personal contact you have had with the many thousands that I have not met. It is quite coincidental that you have met all those many thousands of people, yet have not met the smaller number of people that I have used as my sample size.

> ARRL memebeship amounts to less than 25% of US hams. I don't
> think you know that much about the majority of them.

Obviously you do. Please tell us how many hams you have met and why you think they are different than the hams I have met.

If your contention is that I can only discuss issues if I have met all 650,000+ hams, then I would offer that no one here can discuss issues; we need to shut down the newsgroup.

However, if it is important to you, I would guess that I have interacted with over 5000 hams over the years. Out of those, I do not see more than a handful

that I believe are the way you have offered that most new hams must be. Please tell us about the much larger group you have interacted with and why they are so very different from the hams I have met.

>The big question is whether the learning needs to be heavily "incentivized"
>by the license tests, or not.

IMHO, the tests should contain some of the fundamentals, but it is not only not necessary to test detailed knowledge of these subjects, it is simply not practical. Unlike ILP, I don't think that testing is the golden road to learning. I think it is much more important, and much more effective, to have hams learn those areas of technology that interest them; that is going to result in more and better learning, and a lot more enthusiasm for it when all is said and done.

I believe that this applies to Morse-code, too.

Thanks for the clarification. It was hard to tell when you told me that stating my belief is "harranguing" or "yelling."

> But I gotta tell you-- If ARRL(or anyone else) wants any serious numbers of
>hams to learn the advanced techniques it will take more than just
>haranguing and a few references in the Handbook to do it.

Yes, it will take much more than that. Maybe ARRL needs to put some of this material up on a Web page. Perhaps TAPR should be asked to do the same.

A minute spent on Yahoo's search engine gave me the following (among many others -- perhaps what is needed is a tutorial on the fact that search engines exist):

Spread Spectrum Tutorial:
http://www.tapr.org/tapr/html/ssf.html (TAPR, a reprint from a QEX article)

DSP:
http://www.arrl.org/tis/info/dsp.html

Software defined radio: (This one needs more work, but it is a start.)
http://www.arrl.org/tis/info/sdr.html

> I'd suggest the BOD start a true basic level educational initiative to do
just
> that.

Although they have not yet delved into technical subjects, the ARRL education and certification program is intended to do just that. The ground level of this program started with a discussion board in which ARRL members told the program manager what they wanted to see. Did you get any reaction to your comments when you posted them to that discussion board?

http://www.arrl.org/cce/

> Start by cocmparing the basic level differences with a a conventional
> superhet then a ground-up model of a DSP radio transciever, on the
> most basic operational level that will function, then publissh the whole
thing

> in a series of magazine articles- and NOT in QEX.

Maybe ARRL should publish them in QST, then make them available for download on its web pages. :-)

> A book wouldn't hurt a thing.

Maybe ARRL should put a chapter in the Handbook on DSP techniques and publish a book on spread spectrum.

http://www.arrl.org/catalog/?category=Digital+Communications&words=spread+spectrum or go to http://www.arrl.org/catalog and type spread spectrum in the search box.

> With all the yelling at us that goes on here SURELY there are plenty
> of experts that could handle this in stride - aren't there?????

Yelling? Do you really think that someone saying that he believes that more hams need to learn the fundamentals about modern communications techniques is "yelling?" That sort of reaction is why I believed that you were in disagreement with what I said.

> Bottom line, all this noise is just that so long as it isn't followed
>by actual movement to accomplish.

I agree. If there were more of me to go around, and I were more of an expert, I would be able to do more. Fortunately, there is a lot that has already been done.
> It really becomes mundane, all the "we
gotta modernize" stuff with nothing
> to back it up.

You are being somewhat critical of this information, at least I get the impression you feel it is not adequate to teach the fundamentals. Can you be specific about what about each of the links and books is not adequate and offer any suggestions as to how they can be improved? I am curious, did you read this material when it first came out, or just before you made your post?

Not tremendously different than ARRL's proposal and comments, at least as compared to the final FCC result.

>>>My question for you is -- what do you have against striving to
>>>achieve a lofty goal?

>>Do you see everything through the filter of striving, or a lack thereof?

>An even better question would be why do you see nothing through
>such a "filter?"

Although I see some people within the Amateur Radio Service who do not want to learn, it is my experience that the vast majority of hams became hams because they thought it would be a beneficial and learning experience. Admittedly, I don't qualify my beliefs with a caveat that they don't apply to a minority of hams. I do not think it is necessary to do so, but your misunderstanding of that does disprove the rule. I thought that common sense would have told anyone that I was speaking from my oveall experience.

> What in the bloody blue blazes is wrong with
>establishing and maintaining a set of reasonable requirements,

>From: Dick Carroll dixie@townsqr.com

>And the output of the Kachina is undistinguishable from a non-DSP rig.
>You say we must do it because someone can.

The Kachina is a good example of a software-controlled radio. Its DSP implementation is the start of what constitutes a software-defined radio.

As DSP technology improves, and right now, it is good to at least 10 MHz, we are literally going to see software-to-antenna radios. They will be readily programmable to be any mode radio that we want. To make design changes, one will download new code. The FM, SSB, SS, data, digital voice or CW signals will be encoded and decoded right in software.

In the long run, these radio techniques will increase flexibility and interoperability of radios. The FCC may very well make changes in the way that it allocates spectrum and operating authority as a result.

Spread Spectrum is at least as revolutionary a change as was AM-SSB; the former was, at least initially, accomplished by taking an AM signal and running it through a filter. SS and digital voice are more different than SSB and FM than was AM/SSB. Using SS, and/or trunking techniques, the very way spectrum is used in the Amateur Radio Service could be changed. Instead of allocating frequency pairs that are unused most of the time, that block of spectrum could be accessed by multiple users, each with their own spreading codes, thus limiting the use of the "repeater" bands not by the number of potential users, but by the number of actual users. No more "no pairs available" and coordination difficulties. Not as sweeping a change as AM to SSB?

>No one **EVER** suggested that hams should refrain from learning about
>new technolies ...

> WE DO RESIST the continued assertion that we must "modernize" by
> dumnping everything that interests us just because it might have been
> around longer than the latest digital dream.

I will speak only for myself, Dick; I have never suggested that you need to dump anything that interests you. I sure don't intend to stop using OOK CW. If you feel that I have suggested that you need to stop using CW, or even that you personally "must" learn new things, you should read my words more carefully. I have faith that hams will learn this technology if they are given some of the reasons why it is important that they do and given the resources to do so. Very few have taken this as "yelling" or as my telling that that they must dump what they are doing. Very, very few.

>We've listed dozens of other objects which are
>also obsolete, and are still in universal use today, but that makes no

>difference.

Yes, they are in universal use today. How many of them are a mandatory part of testing for any priveleges, amateur or otherwise?

>It is clear that the entire movement to "modernize" is nothing more
>than another push to get rid of the code.

Is that what you think that retired Dale Hatfield from the FCC was seeking to do?

>And we refuse to be intimidated or browbeat
>by those who want their agenda to prevail.

There's that "agenda" thing again. Do you really think that the only reason I say that I believe more hams should learn the fundamentals of modern communications technology is to "get rid of the code?" No offense, Dick, but that's pretty lame, too.

I know. Just like it is easy to pass the written amateur exams today
because of the existance of a public pool with all the test questions
and their exact answers.
Just because you have access to software that will allow you to bypass
knowledge doesn't mean you have that knowledge.

> I disagree that it was much easier to do these things in 1963.

And I said nothing whatever about 1963. The selftrained radio engineers
came considerably earlier in most cases, the people who were the
creators of much of what we know as "radio". Many, even most had no
engineering training at all.

Perhaps Jim needs to talk to the USCG about people's lives depending on one's ability to send/receive dots and dashes. Once he clears that little hurdle, perhaps he can convince the FCC to restructure yet again, and ingnore the upcoming WRC-2003. Kick the requirement back up to 20wpm AND mandate 20hrs of CW use per month to keep your skills current.

That will ensure that the ARS will be prepared to be the life saving service that all of the other professional life saving services aren't.

Furthermore, I don't think that whatever Jim had in mind that would prevent Carl from making it back ("Don't bring that sumbitch to Bookbinders for the RV/EY lobsterfest, he'll never make it back to Allentown") is appropriate behavior between hams whether on the air or here!

You, Dave, and other "Good Ops" -always- pass on critiquing such inappropriate threats. Why? I find it totally unacceptable.

> Maybe I will have to be him a lobster dinner that he can't. :-)

Excellent bait. I've never understood using perfectly good shrimp or delicious squid to catch a fish, but lobster to catch a "squiggy?" Thats probably about right.

I think we're about there. But it isn't just the code issue, its the "I've been a ham for X years, and I own the ARS" mentality that we encounter form supposedly "Good Ops" right here on rrap.

> Why, even our Cecil wanted to engage someone in a 5 wpm
> QSO in the DX windows, just because he can.

Is it inconceivable that the DX station is only good to 5wpm? Certainly if a station from North Korea came up at 5wpm, you would engage in a 5wpm QSO in the DX window - just because you can. Or would you send at 35wpm - just because you can?

Now that 5wpm has become the standard for testing in America, there should be no problem trying to cantact even a DX station who is sending at 20wpm. If the DX is a good enough op, he'll match the speed for the qso. Or should he ignore the 5wpm station? Is this a fraternity, or only a clique.

Sorry, inappropriate reply.

I don't know that I've ever worked a FIST. They don't usually volunteer
their FIST number while on phone, do they? Maybe they should.

I'm certain that I've never "worked over" a FIST.

> like "boring," "rammed down my throat" and "Agenda."

That is basically because you say something then explain it in terms
that change the meaning of the original statement (not just you, all the
"we gotta modernize the ARS" mavens). You say that, then next it's "Hams
can learn the bsics of .....". Which is it? Tell us again just how
it is that ham radio is NOT today modernized. Because we don't use (and
have absolutely no need to use) spread specgtrum?Because SSB and CW and
a few digital modes most of which have been around awhile seem to serve
the ARS's neds quite nicely? All this "we gotta modernize" talk appears
to be mostly lip service to some Technology God who will surely smite us
all if we don't submit to The Agenda.Sorry. It just doesn't compute.
Cecil is dead wrong when he says that DSP is the SSB of the 50's. It
just isn't so. There WAS a desperate needd in the 50's and 60's to
relieve the congestion caused by the predominance of AM stations on the
ham HF bands, and that was clear to anyone who ever tuned across one.
The heterodynes were inescapable and a low powered AM station didn't
stand a chance againse them. SSB eliminated the heterodynes and allowed
much more simultaneous voice activity without the constant interference
and the need to run high power to suceed.
But to insist that SSB be abaindoned in favor of digitized voice on
HF-whatever the mode, just becase it is technically possible, is
ludicrous and most hams know it, if they know anything technical. And
there is some question that the fact that so many do not is one avenue
of success by digital proponents. When people know little about the
subject it's much easier to convince them that "change" is really
necessary when it truly is not.
All the "modernization" talk is centered on modes alone, and totally
ignores the vast technical advancments we use daily. There is simply NO
comparison between the rig I use now and the simple transmitter that I
put on the air in late winter of early 1957. That simple two tube
homemade transmitter was really labor-intensive in operation compared to
the one I use today, where I touch one button to select the band, touch
it again to select one of three stored frequencies in that band - with

the mode for that segment already stored- and since I have the
"autotune" button already selected, I don't need to either tune the rig
nor even tune the antenna! Simplicity and modernity personified! It IS
almost boring!
And the differences in the receivers is beyond comment. The surplus
single-band WW2 bomber receiver I had to start out was close to the bare
minimum, but its wide bandpass tought me operating skills that probalby
wouldn't have been learned any other way, in digging a single signal
from out of the bedlam- with the filter between the ears. instead of in
the rig. These are skills most new operators never develop.
No wonder so many of us also keep some old stuff around and also
homebrew "Hollow State" ham gear. Sorta makes one feel like a REAL ham
radio operator for a change. Yeah, things change, and for the better.
But not always!

> assume that the "most valuable" of all modes will not be used by hams unless
> they are required to learn it to get a license.

IF there was any way to impress upon beginners that fact without them
learning for themselves about radiotelegraphy, you would be correct.
Unfortunately that is not the natural progression.Few who haven't
experienced it can personally realize how "valuable" Morse is as a low
tech, purely useful method of simple basic communications in a high tech
world.
Virtually no beginner starts out eagerly volunteering to learn Morse
code
just so that he has it at his disposal. It is almost universal that it
is
learned for the purposes of qualifying for the ticket and enroute learn
its true charactersitics. When that goes away, the mode goes away.
That is wrong from any perspective except that of the Carl Stevensons
of the world. You can believe that he got "close to 20wpm" if youwish,
just because
he says it doesn't make it so. I seriously doubt he could recovnize his
own callsign. It is perfectly clear from his ravings what his real
intent is. And it isn't "live and let live".

I didn't mean to underestimate anybody. Only point is that there was a lot less
serendipitous discovery of ham radio once SSB began to seriously displace AM.
>
>>Eventually home computers and internet connections
>>will be as common as TV, if not more so.
>
>Eventually TV and the Internet will be the same thing...

You got THAT right! In fact, some radio stations and networks simulcast on
their websites. TV tuners for a PC have long been available. Between cable TV
and highspeed 'net connections, how long before more people are "watching TV"
on their computer monitors than on their "TV sets"? How long before the RF
connection disappears entirely for most people? Not long in most urban/suburban
areas.

At my old house, I could see the "Roxborough antenna farm" from my second-floor
bathroom window. True line-of-sight! Most of my neighbors had similar paths to
the TV broadcasters. I could get no less than a dozen TV stations using rabbit
ears - yet almost the entire neighborhood was on cable. At my new house, the
reception is almost as good with the rabbit ears, but I'm the only one without
cable. That may change soon, because the township meetings are on cable.
>
Next step is to replace the cable with fiber. TV broadcasting? Practically
obsolete.

T. L.:

I could care less whether or not you post a callsign; and for the record, I could care less if you are an "Pre-Resturcturing" Extra or a newly-licensed Technician. You identify your posts with your name, for this or any newsgroup, that is sufficient. At least you are not hiding behind some fictious "screen name," or so it seems -- but I'm inclined to give the benefit of the doubt when I see a "real" looking name. However, in these dumbed-down days of ham radio, any idiot can get a license and a call sign, so I have no need to see yours. Never think you need to post it for my benefit.

>What year do you estimate that the last Morse code QSO will take place on
>Amateur Radio, Larry? Can you explain why you believe that year will be the
>one?

Ed:

I'm not sure that there will EVER be a 100% elimination of Morse code use on the ham bands. I even think its possible that in a total no-code testing requirement licensing system, there may even be a few hams that learn the code out of their own curiosity, interest and initiative. The numbers of active CW users will certainly decline in the absence of the testing requirement, but there will always be a few CW users hanging in there.

>>> Do you feel that the mode has so little value to ham radio that no one
>>> will learn it and use it unless it is tested?

Like I said, a few will -- but the numbers will be a tiny fraction of what we would get if the requirement remained. This has nothing to do with the value of the mode -- it has to do with the fact that learning the code requires an unusually higher level of dedicated effort. Everyone knows how to talk, and typing is a more common skill than Morse code proficiency. Therefore, you need to compare apples to apples, and stop hauling out your oranges when apples are being discussed.

>>Asked and answered, many times.
>
>Yes, you have; you do not believe that Morse code can survive without
>government support and welfare through an affirmative-action testing program.

And I think you and I don't have a common understanding of the meaning of the words "government support," "welfare," and "affirmative action." Please give up the Cecil Moore impersonation, Ed, it doesn't become you.

>
>The great majority of people who don't know Morse code don't consider
>it to be universal or easily implemented. If you want to use Morse code
>for emergencies, Dick, by all means do it. Most of the rest of the world
>has given up on Morse code for emergency use.

Cecil:

That's true -- and the reason is that it requires an operator to learn and gain useful proficiency in the skill of sending and receiving Morse code! Now, when you're talking about commercial or military utility communications applications, this means the expense of training, paying, and providing benefits for flesh-and-blood radio operators. If I owned a shipping line, I would probably want to eliminate that particular part of my overhead, just as much as anyone else. Therefore, ships at sea and land-based communications facilities depend on expensive, computerized communications systems instead of human radio operators.

Amateur radio does not have these economic considerations, but we still have to deal with the fact that learning and gaining useful proficiency in Morse code still requires a considerable amount of dedicated effort on the part of the operators who wish to use it. In the past, this effort was motivated and incentivized by the promise of increased operating privileges; now that that incentive has been removed, there will, for sure, be far fewer people even bothering to learn and gain useful proficiency in Morse code.

The Morse/CW mode continued to survive and flourish only due to the code testing requirement. In the absence of the requirement, the numbers of Morse/CW mode users will most likely shrink to a small fraction of their present numbers, at least in the United States. European/Asian/African operators don't seem to have as much of a laziness problem as we Americans do.

If you spent a half hour per telephone contact, 8 hours per day, 5 days
per week for 52 weeks per year, you'd talk to 830 hams.

>

> they are different than the hams that you know?

If you attended a hamfest or club meeting every week for 52 weeks and
talked to 30 persons per meeting you;d talk to 1,560 hams in a year.
All in all, not any overpowering percentage of licensed hams.

> How could I possibly see so
> much hope and enthusiasm in hams, yet you see none?
>

Once again, you misstate my position. That is not at all what I said.
I said that you don't see all the hams out there who just want to be
hams, and don't have the training nor the refined technical skills to
get involved in your mission of "high tech for the masses", nor will
they ever get very deeply involved in it for that very reason. It is NOT
a simple matter and everyone except the promoters of the Agenda know it.

Oh, the Agenda is not a formal document nor even a clearly stated position, it is just an attitude. It basically says, but certainly is not limited to, "get the ARS away from CW specifically, and into the world of high tech, never mind anything else". It ignores completely the practical aspects that characterize almost every ordinary ham. He wants to use ham radio as he recognizes it, which is to say that it IS an evolving and improving entity, and he intends to be a part of that evolution and improvement. He does NOT believe that just because inventors working for the telephone company have found that spread spectrum techniques find favor in use as cordless telephones that he must line up and follow suit. He sees that is pure techie nonsense, and recoginzes it as what it is - an attempt by a few hams and others whose interests are in little except development to trump his own desires and best interests. Cecil Moore said yesterday that his interest is in experimenting and he rarely gets on the air. That's fine, but it also shows that his interest is driven by something other than that of the average ham.

Of course hams need to learn more about advancing technology. It won't happen effectively until people who develop these systems who are able to explain them in terms understandable to the average ham who knows little or nothing about those techniques and little about technology at all.

THAT is the challenge. I and othes have raised it several times here in recent years, to do it, and explain what you're doing, or get off the soapbox. So far I've seen nothing that I would call progress. A single text explaining in simnple detail, it that is possible, the basics of the new technologis would go far toward educating the masses of hams. Most I know would spring a few bucks for such a boot. If they could find it. Instead all they get is criticism.

> > For every one you contact there are many thousands you never know
> > about. No one I know personally has had contact with you.
>
> Of the 50 or so people that show up regularly here, about 5 have had personal
> dealings with me.
>
I would guess that I have interacted with
> over 5000 hams over the years. Out of those, I do not see more than a handful
> that I believe are the way you have offered that most new hams must be.

Of course not. You see those basically who want to see you and hear what you have to say. Others are busily doing other things that interest them. I will say, you are probably the biggest crowd draw that Newington has to offer. When a crowd of hundreds or more producesd an audience of 50 for your presentation that means that you won't be exposed to the attitudes of aa pretty large majority.

Please
> tell us about the much larger group you have interacted with and why they are
> so very different from the hams I have met.

Ed, I live out here among them, talk to hams almost daily, have hundreds of friends and contacts that have persisted for many years, and spend a LOT of time on the air, mostly listening to others. You on the other hand spend your time in the ivory towers of Newington. I can easily see that you inhabit the ground floor, as you are in fact one of the most practically minded ihabitants. But the fact remains.

Surely you understand that the people that gravitate to your presentations at hamfests are the subset of the much larger crowd attending the event,those who happen to know you, or of you, and are particularily interested in what you have to say,but they represent a small percentage of the attendance. Far more wouldn't know you from Adam, I'm sorry to say. Atg that, you're probabaly the best known Newingtonite.
If I attend a hamfest where you appear I'll be in the group you address. A great majority of ordinary hams will not. Some will be interested in your RFI work. Some will skip because you are a part of the movement to "modernize" ham radio away from their interests, and they don't support that. Not many hams believe it is in their best interests to cause the ARS to implement such modes as spread spectrum nor univesal digitized voice especially on HF, since the bands are not unduly congested and the "cure" is just as likely to be much worse than any perceived ailment.

Many of these same hams believe it is a travesty to allow radiotelegraphy to atrophy to the point of uselessness just to allow easy entry into ham radio, and believe that this is a part of the movement to force ham radio into accepting modes that are commercially invaluable but which have little or nothing to offer to hams in practical application. Not much is known about their actual effects on the HF ham bands. Many hans just don't buy the assertion of many in your movement that ham radio must abandon our older but very reliable and utilitarian modes for no reason other than the fact that commercial engineeers must constantly come up with "new and improved" versions of everything, else they find themselves unemployed. Yes, we heard, "no one is
insisting that we abandon anything...". Just what does "modernize" mean as used in all the rhetoric, then? That, to them, is the thrust of the urge to "modernize". What else could it mean? That just because there is utility in using spread spectrum techniques in many communications venues that we actually need it in ham radio? I don't think so, and neither do they.

ARRL recently affirmed that it is not seeking to change its policy wrt the US code testing requirements. Do you believe from my posts here that my personal view and that policy are identical?
You can rest assured that, as an ARRL employee, I will not take one single step with the FCC in contrast to the ARRL policy position, but as a free individual, I see no conflict in posting my personal views, the reasons for them and discussing those views with my fellow amateurs, just like you do.

Do you really believe that ARRL employees should not enjoy the same free-speech rights as other US citizens? Otherwise, you seem patriotic; why the difference for me?

I have posted quite a bit on this subject in the past, in a way that I thought said pretty clearly to what extent I feel what I say is shaped by my employment. Did you not read them, or think I was lying?

Hello Jim, I'm not familiar with archaic code, but the Morse code is
still a requirement in the USA and Canada. Go ahead and learn it
because you now get some ROI, but don't plan on using it at 5wpm.
That's frowned on.

TL, while its fun to drive an antique car, I don't think it should be a requirement to be licensesd drive a modern automobile. Manual choke and dwell can would leave most modern motorists stranded by the side of the road.

Even Cecil's website shows him (and daughters) dressed up in period Cowboy (and cowgirl) garb. I imagine that it was a lot of fun. Ditto Morse code. Probably a blast if you're any good at it, probably sends rivers of sweat if you're not.

But to require it to operate any other mode on HF???

>>that there are 37,980 new hams?

>No, it means nothing to me, actually. However, it had damn well
>better mean something to you! I'm not the one who makes his living
>working at ARRL HQ -- you are!

Okay, so you were worried about me. Thanks, but I really can fend for myself. My salary is not tied in to the number of members ARRL has. Whether I have a job or not might be, but I don't think I would be the first to go. Any concerns I have about ARRL membership are tied in to the things that ARRL would have to stop doing if the membership base were to decrease significantly. Every year, there are things that I would like to see funded that cannot be funded. Those members would go a long way to making that happen. But over and above that, I think that the health of the Amateur Radio Service depends on more than the health of the ARRL, don't you?

But to reassure you, if I were to lose my job because too few hams chose to be ARRL members, I would be okay; I am reasonably sure I could secure employment elsewhere.

But thanks for thinking of me.

Nocoders have no code experience so their opinions about Morse code don't matter. Non-Extras are not fast enough at Morse code to have a valid opinion. Post April 15 Extras didn't prove their Morse code skill so they also have no right to post their personal opinions. Members of NCI shouldn't post their personal opinions. ARRL employees shouldn't post their personal opinions. See the pattern? Anyone who disagrees with Larry on the subject of Morse code testing should not post their personal opinions. :-)

Sure seems to me that is what you are saying when you say CW cannot
succeed by standing on its own merits without an affirmative action
program. Either the ROI is there or it's not. If the ROI is there,
we don't need an affirmative action program. If the ROI is not there,
it doesn't deserve an affirmative action program.

I would imagine that most people who use all caps do so to emphasize.

I think that those who use a capitilization only on the first character of a word do so to give it an Importance that it wouldn't otherwise have.

If you want to know the real reason that Steve uses capitalization, you could ask him. His email address is k4yz@aol.com. His answer would be more accurate than my speculation.

I disagree and you cannot possibly know that for certain. I learned Morse code in Cub Scouts because it was fun. It has been fun for me for 52 years. I have never used CW or needed to use CW for an emergency. I seriously doubt that I will ever use CW for an emergency. Why don't you stop telling everyone what a pain in the arse it was for you to learn Morse code and promote the fun aspect of the mode with a little positive thinking?

3213. New Zealand protest to FCC - Code Discriminates

Newsgroup: rec.radio.amateur.policy
Date: 2001-02-11 19:33:55 UTC
From: K0HB <k0hb@my-deja.com>
Message-ID: <966pf4emm1@nnrp1.deja.com>
Source record: 3513

Just re-read Fred W5YI's CQ article about "code is discriminatory",
based on comments to the FCC from NCI enthusiasts in New Zealand.

And now r.r.a.p. and NCI present a special documentary on the ZL
training effort for the upcoming $alt Lake City Olympic$.

We see a training field with various athletes engaged in various
physical

routines. Standing before camera is REPORTER.

R: Good afternoon. The activities which you see behind me are the
training exploits of the cr&#65533;me de la cr&#65533;me of the New Zealand Olympic
aspirants. These fine young physical specimens have inspired the
confidence of the masses for the upcoming Games. However, this silver
cloud has a dark lining. There has recently been a great
deal of controversy over the nature of the ZL Olympic team, and
allegations have arisen that physically handicapped people are
being seriously underrepresented in the upcoming Games. Charges
of discrimination are being pressed upon the ZL Olympic
Advisory Committee.

Camera changes to INTERVIEWEE 1, speaking into visible mike.
Subtitles flash "Arthur Chesterton, Kiwi Society for the Prevention
of Human Discrimination." I1 wears a sand-colored coat and a porkpie
hat.

I1: It's blatant discrimination, that's what it is! The Olympic Games
and Morse Code tests are unfair to athletes who have any physical
handicap, or don't want to learn Morse.

R: But there are those who have competed successfully even with
physical handicaps.

I1: Yes, but they weren't blind, or on crutches, or confined to a
wheelchair.

R: But don't the nature of the games preclude the participation
of anyone who falls into one of those categories?

I1: That's what I mean! It's blatant favoritism and unfair attitudes
toward those who don't meet the standards.

R: But is there any need for those who don't fit the standards to
compete in the games in the first place?

I1: Well, there's pride! Besides, if the games are unfair to handicapped people, perhaps they should be altered so that handicapped people would be able to participate.

R: But some say that the spirit of competition would be weakened by removing the stringent standards which have been set.

I1: Spirit of competition my eye! It's all commercialism and political hype, anyhow -- who would notice a few more players on the field? Er, so to speak.

Camera changes to INTERVIEWEE 2, also speaking into mike. Subtitles flash "Stanley Greenburt -- New Zealand Olympic Advisory Board." I2 wears a typical business suit.

I2: The entire situation is ludicrous.

R: How so?

I2: Well, the spirit of the Games is being undermined by people who are obviously envious of those who are better gifted. Handicapped people have no place on the playing field. The Olympic Games represent the peak of physical perfection: tall, handsome, muscular athletes, their auburn hair waving in the breeze... their bare tanned arms glistening in the sun... their flimsy shorts delicately fluttering over their tight buttocks... Scene changes back to R at training field.

R: The controversy still rages, but already handicapped people have in fact begun training for the Olympic Games.

Camera shows person in a wheelchair rolling along a high-diving board, teetering at the edge, falling into the swimming pool, and failing to resurface. Bubbles rise. Switch to a blind person hurling a discus which sails into a nearby garbage can. Another blind person hurls a javelin which hits a passing person in the chest. Camera switches to deaf runners at a starting line. The gun goes off, but nobody moves. Switch to another person in a wheelchair holding a shotput, leaning back to throw it, being caught off-balance, and falling over backwards. Judges measure the distance the shotput rolls.

VOICE-OVER: Already have handicapped athletes begun the long and torturous task of training for the Olympic Games. The trainees shown here only represent a small fraction of the total number of the eager, gutsy individuals who have the courage to grasp for their wildest goals. Of these, perhaps a lucky few will go on to the actual Olympic Games. Hopes are high, as are spirits. This is indeed a chronicle of sheer heroism, a shining example to the youth of our nation. Truly shall this be a great legacy of pride.

Scene changes to R at ski slopes of Salt Lake City Utah.

R: At this time a blind ski team has entered the Winter Olympics in Salt Lake City, Utah. In order to illustrate their fine, nay, artistic, performing abilities, we now show you a film of their achievements, played to the music of Johann Strauss' "Blue Danube Waltz."

Roll clip with "Blue Danube" background music. Ski team, with dark glasses and white canes, performs all sorts of humorous stunts and ends up with a variety of fates, e.g. sailing off edge of cliff, running into trees or boulders, crashing into each other, plowing into crowds of people, smashing into judges' stand [7.8, 8.1, 7.4], and so on.

Total run time about 35 seconds.

Well, I don't believe your statement is true, Larry. I hear hams
checking into SSB nets when they cannot be heard on SSB. The CW
signal stands out from the SSB signals plus noise. After all, CW
has a double digit dB S/N advantage over SSB. A five watt CW
signal is like a 150+ watt SSB signal.

Source record: 3516

In article <964v3s$57i$1@nnrp1.deja.com>, Steven J Robeson, K4YZ <k4yz@my-deja.com> writes:

> Again, like your "views" of Ham Radio, you look from the outside >in and make poorly substantiated judgements on that. Oh well. Nothing >we haven't become accustomed to.

The "we-we" is being shaken again...

"Looking from the outside in" is what about 300 million Americans do towards US amateur radio. Using such a phrase implies some secrecy in US amateur radio. Unfortunately, for you or your "we," amateur radio is not secret, nor exclusive, nor mystical, nor religious. It is one of the most transparent of all hobbies, clear to anyone with a receiver within range of amateur transmissions.

That "outsiders" are somehow ignorant of activities, interests, or technology is itself an ignorant statement...or it presupposes a false and misleading sense of "royalty" by those licensed in the amateur radio service. Activities, interests, technology, and even individuals are well documented in publications of the ARRL, CQ Communications, and 73 magazine in addition to other newstand publications. All US amateur transmission modes must be "in clear" (without encryption or intent to deceive) by law.

Radio itself is a known technology, merely 105 years in existance since the first two radio communications done in 1896. The public is aware that radio in many forms exists, everything from two-way vehicular business radios to satellite relay communications. There is nothing exclusive to modes, methods, standards, in amateur radio that has not already been done in other radio services. Perhaps only the jargon and terminology pertinent to amateur radio's evolution is exclusive. Certainly the Belief Systems at work in amateur radio is exclusive. The Urban Myths propagated by certain self-centered amateurs as generalities of activity, basis, or purpose are all most exclusive and only self-serving, self-prideful.

One of the most damning of all implications is that no one else "knows anything about amateur radio" until one is licensed in that radio service. The only federal agency that regulates and licenses radio amateurs in the United States does NOT require any staff or Commissioners to hold amateur radio licenses. The FCC sets regulations, again by law, but they are not required to be a part of amateur radio. Why is there an assumption or implication that "outsiders know nothing at all," therefore they

cannot be a part of any rule, regulation, or policy establishment?

Another misstatement is that amateur radio is a "service" to the nation. Throughout Title 47 the word "service" is a regulatory term refering to the type and kind of radio in various Parts of all US civil radio regulations. While amateur radio MAY provide an actual service during civil emergencies, US amateur radio is not defined with a specific purpose of providing emergency communications. In actual emergencies, all citizens, amateur radio licensees or not, are expected to come to the aid of their community or the nation as a whole Amateur radio in the US is stated to be an activity of and about communications for personal interest without monetary compensation. In a short form, it is a hobby.

Some individuals become so wrapped up in a hobby that it becomes a lifestyle, even a reason for existance. That is not a requirement for all, indeed most amateur radio enthusiasts view amateur radio as just a secondary activity for fun and relaxation. Why then should a hobby be structured in regulation as if it were a guild, trade, or even military service? The "incentive plan" structure of US amateur radio licensing was a rather thinly disguised aprenticeship-journeyman-master guild structure having no less than five "ranks" complete with "privileges" in the EM spectrum and with modes of operation. The names even carried emotional overtones of the supposed skill of the licensee, no doubt pleasing to those of "higher" rank who could look down on "lesser" classes.

It is false and misleading to say that anyone not licensed in the US amateur radio service "knows nothing" about amateur radio...until they are "properly" licensed. That is the statement of mysticsm, of religious fervor in a quasi-religious belief, of exclusivity and elitism that is self-serving, pompous, and arrogant on the part of the claimant. It is both emotional and puerile. It is not a statement of pride but rather denial or possibly insecurity.

> I already DO have "bragging rights", Lennie. In more than one
>field of endeavour.

This is yet another statement of puerile pomposity. If the only purpose of US amateur radio licensing is to establish "bragging rights" or "superiority" then it has obviously succeeded for some. Neither bragging rights nor superiority is part of the Basis and Purpose stated in Part 97...yet it is stated often by those who feel threatened by loss of rank, status, and privileges due to regulation changes. To those who prize rank, status, and privilege above all else in US amateur radio, who revere tradition with an almost fedayin fervor, newcomers or "ordinary" hobbyists are forgotten as "unimportant" or "lesser beings." In the whole of national regulation necessary in all of civil radio, that is a

narrowminded selfish viewpoint which does not logically apply to regulations.

> G'night, Lennie. Mrs A has your dose of Geritol ready.

Again, typical of Robeson's remarks, a personal negative comment having nothing to do with the subject thread. It is an emotional outburst of someone who cannot control himself nor has the stamina or courage to argue a subject on the subject's merits or demerits. If that is the majority opinion of already-licensed US radio amateurs, then there is little hope for the survival of US amateur radio. Indeed, such a majority opinion does not belong in a civilized society. It belongs in barbarian cultures whose democratic principles are settled in school-yard fighting, only the physically-strongest surviving. Proponents do not understand that they may survive to be older and targets of the same taunts they now champion. They gain nothing.

Such texts exist, but one does have to read them. Have you? If not,
you're being disingenuous when you say that nothing has been done. If
you have read them and found them wanting, some direct, specific
feedback to the publisher or authors would be a positive contribution --
certainly more positive than disparaging the efforts of those who are
trying to educate hams about current technology.

> Most I know would spring a few bucks for such a boot. If they could find
> it.

Spread Spectrum fundamentals:
http://www.arrl.org/catalog/?item=3177

There have been several treatments of DSP techniques. See:
http://www.arrl.org/tis/info/dsp.html#signals
and the ARRL Handbook.

Yes, more is needed, and more will be forthcoming.

> Instead all they get is criticism.

The only ones who get criticism are those who repeatedly disparage the
efforts of the folks who are promoting new techniques by claiming that
those folks have an "Agenda" that simply doesn't exist.

> Please
> > tell us about the much larger group you have interacted with and why they are
> > so very different from the hams I have met.

Because, Dick, you tend to meet prinicipally those hams who are
interested in the same things you are since you meet them in the course
of doing what interests you. That gives you a biased view of what hams
think, just as those who stay away from the things that interest you
tend to have opposite biases.

> Ed, I live out here among them, talk to hams almost daily, have

> other hand spend your time in the ivory towers of Newington.

I'm curious: How do you know how Ed spends his time?

Why don't you simply accept that reasonable people can evaluate similar information and reach different conclusions? It seems clear to me that you think there is an agenda to eliminate CW as a mode within ham radio by eliminating Morse testing, thus drying up the pool of CW operators. (Please correct me if I'm misstating your views.) Ed, on the other hand, has said that he thinks that the pool of operators will NOT dry up because of the inherent qualities of CW. (He'll correct me if I'm wrong about his opinions, I'm sure.) If Ed believes that, clearly he's not promoting any such agenda as you are claiming. Now, he may be wrong in what be thinks will happen, but if he is it's still an honestly held belief that CW will persist, not be eliminated.

> Surely you understand that the people that gravitate to your
> presentations at hamfests are the subset of the much larger crowd

If that were the only contact HQ staff has with hams your point would be valid. But it's not. Even at hamfests and conventions, there is actually much more individual contact than that -- on the floor of the hamfest, in the hallways, at lunches and dinners, etc. I don't get out to hamfests nearly as much as Ed does (or nearly as much as I used to), but I doubt I was ever at a hamfest that I didn't talk individually (not in a prepared speech) to at least 50 hams, and at the larger hamfests far more. And that's just the hamfests. Factor in the phone calls, emails and HQ visitors and the number is much larger. Plus, aside from his professional duties, Ed is quite active on the air, just like you, and thus has access to the same basic information source.

> Far more wouldn't know you from
> Adam, I'm sorry to say. Atg that, you're probabaly the best known
> Newingtonite.

If you're talking about rrap or RFI forums, true. But go to a DX forum and ask who at ARRL HQ they know best. Go to an emergency communications forum and ask who they know best. Go to an educational forum and ask who they know best. In none of those cases will Ed's name even come up. This is an example, Dick, of your misplaced belief that your own experience extrapolates neatly to ham radio as a whole. You fail to fully recognize that the experiences of others may be markedly different from your own and may lead to their holding different opinions. And that even those with similar experiences may come to different conclusions, all without having "Agendas" other than to enjoy and contribute to ham radio.

> Many hans just don't buy the assertion of many in your

Then why not simply believe that?

> Just what does "modernize" mean
> as used in all the rhetoric, then?

Adding modern techniques to our amateur toolbox without abandoning old ones that we still find useful -- or even just enjoyable.

> That, to them, is the thrust of the
> urge to "modernize". What else could it mean? That just because there is
> utility in using spread spectrum techniques in many communications
> venues that we actually need it in ham radio? I don't think so, and

Dick, why don't you just stick to telling us what you believe? You have no justification for attempting to speak for the rest of ham radio. Trying to strengthen your argument by claiming that unnamed masses agree with you is a weak rhetorical device.

"ARRL" is all capitals. :-)

I don't think I'm far afield on some who have quasi-religious thoughts on US amateur radio. I used to call them "ama-baptists" for their proselyting but others got confused and thought I was berating the AMA. :-)

While some folks use Yaesu and Kenwood radios, I'll swear that they are using Icons. :-)

[sorry, I shouldn't swear, Jim N2EY doesn't like it... :-)]

"Code" is a four-letter word.

Watch how many will think the above sentence is swearing or a "denunciation" of morse code! :-)

I can see some applications on VHF/UHF where SS could solve a few
problems that have been politically knotty, and thus avoided by both FCC
and ARRL. The repeater situation should have never been allowed to
degenerate into the sort of situation where all pairs are tied up while
there is mostly silence on those bands, and much of the activity one
does hear makes you want to turn off your HT.
But of course your discussion above addresses VHF/UHF, and not HF where
there is simply no reason to even consider such a change-unless it is
considered to be necessary just because the modes in use on HF must be
considered old and obsolete, thus unusable. That's an attitude
attributable mostly to people who spend most of their time trying to
change things whether or not they need changing instead of using HF ham
radio.

This little scrap has been ongoing far longer than I've been on usenet.
I don't mean to attribute any particular part of it to you personally,
just that you have shown that you agree with the thrust, that ham radio
is derelict in having not widely adopted all those new modes which have
done so well in commercial and government use. Overlooked is the widely
diverging orientation between ham radio, especially HF, and those other
services which have largely abandoned HF.
I believe the main reason for that is there is largely no need felt by
most hams for ir, particularily on HF. And most of the spectral problems
on VHF/UHF are because of outdated schemes and regulations instead of
modal shortcomings. That doesn't mean that there is no benefit at all to
making wholesale changes, just that there is no demonstraded need. The
"installed base" principle DOES apply.
The political problems on VHF/UHF might be releived by changing to SS
but look at the huge cost involved for the small benefit, and I really
don't think most hams would benefit at all. I see it as merely "change
for the sake of change". With the serious decline in use of much of the
present repeater system having occurred I doubt if much activty would
survive. Would I buy a completely new VHF rig to replace the FM rig that
I rarely use now? I seriously doubt it, unless some new factor became
involved. Replacing all the FM gear now in use is a huge project that I
just don't see happening at all, wsithout some more compelling reason
than just updating the technology. Just as it has not happened in most
commercial and governmental organizations. I know that most Public
Safety organizations have not changed to more modern modes and still use
point to point FM and repeaters. Some of those that have have moved to
trunked systems have had reason to regret it, at least at times.
The idea that a hugely complex system can be made to be so reliable that
it won't fail is still a concept not yet realized.

>
> Is that what you think that retired Dale Hatfield from the FCC was seeking to
> do?

Of course not. I see that my wording was a bit overly strong. On the
other hand, I sure do believe that he has been greatly influenced by the
stridency of people like Carl Stevenson. Don't you? After we've been
flatly told that "a few people can change the world and just did"? After
FCC near-totally ignored the ARRL BOD in the restructuring decision and
gave NCI almost everything they
whined for and some they didn't?

> >And we refuse to be intimidated or browbeat

>
> There's that "agenda" thing again. Do you really think that the only reason I
> say that I believe more hams should learn the fundamentals of modern
> communications technology is to "get rid of the code?"

No, Ed, you're not nearly the main part of the problem. You're only a
side feature of it, in that you have decided to agree to cave in to the
shrillness that is total opposition to ANY Morse code operational test
requirement. Evidently the entire ARRL heirachy has. The rest of it I
see as being used mainly for justification.
Three or four years ago, not long after I first landed on this NG I
said something about "Where's the beef? Why isn't there any gear
available to actually use if these glitzy new modes are so great? When
are some of the strident advocates going to put their expertise where
their mouths are?"

If they are in fact all that beneficial and applicable to ham radio why
are there NO renditions available today on the market, even as kits?

I looked over the TAPR website you gave, and yes indeed, I believe it
is proper to add a few questions on that material to the question pools.
But the tests, instead of being reduced in scope and number of
questions, would be better expanded when including new material,
otherwise they actually are being reduced in scope of coverage.

CW ops can go anywhere on most bands for a QSO. Yet they usually stick to the agreed upon CW areas of the bands. Do you have such a low opinion of phone ops that you don't think that they can abide by a gentleman's agreement to do likewise? I'll bet 95% of them can. They could and did when they voluntarily divided up the phone bands between AM and SSB during the transition. Maybe a concerted education effort by ARRL on your 160 meter problem would help. Better than more government regulation to solve a ham problem, don't you think...

>Cecil wanted to engage someone in a 5 wpm

I think Cecil wanted to make a point. And perhaps get a goat. But I doubt that he really intends to violate the gentleman's agreement of chatting in the DX area. But then you knew that didn't you. You were also trying to make a point and perhaps get a goat... :-)

I think it is quite logical that if applicants are not required to learn the code before becoming a ham, then there will be far fewer who will take up CW afterwards. To think otherwise flies in the face of basic advertising theory.

Just think if one of QST's advertisers could force all hams to try his rig before getting a license. Sure many would hate it at first, but after awhile some would find that they actually did like it. Sales would go up and the rig would find increased use on the bands. Then after some years the forced rig use requirement goes away. Of course sales and rig use among new hams will go down. It's a slam dunk... :-)

However, will the elimination/reduction of forced code testing be bad or good for the hobby as a whole, not just CW, is really the important point...

Yup. That's what really caused the move from AM to SSB - it became cheaper to run SSB than AM at the power levels hams wanted to use.

AM gear is cheaper and simpler than SSB at low power levels. But once you have an SSB signal generated, building up the power level is cheaper than with AM. The development of the amateur HF heterodyne transceiver (which uses the same frequency-determining parts for both T and R) nailed it for SSB.

Oddly enough, the first true HF amateur heterodyne transceiver design I have been able to dig up is a CW transceiver.

You are probably not far wrong. QCWA asked for just that.

Funny thing is, the 1968-1969 changes radically decreased the amount of phone spectrum available to Generals in the ham bands from 80 thru 15 meters. Then, about 1972, the FCC began widening the 'phone bands, so that over time allmost

all of the "lost" phone spectrum was regained by Generals.

>The question for you Vince then is twofold:
>Is publishing questions from PAST tests illegal when
>done by those college prep course publishers?

Let me have a go at this one.

It's not illegal for at least two reasons:

1) The published tests are intentionally released by the testing agency for publication.
2) The published tests are no longer used - they really are past tests, not current ones.

>If the answer to the first question is NO, then why
>should Bash be held to a different standard of law?

Because Bash violated both of the above conditions. The tests he published were not intentionally released for publication by the FCC, and they were not questions which had been removed from use in testing.

Let me ask this, Bill: If a college prep course publisher somehow got hold of current test questions, and published them, would that be OK?
>
>If the Q&A was (by some miracle) made secret again,
>would you complain when people publised the questions
>they remembered from PAST tests on a centralized web site?

I would, if the intent of making them secret was to keep the exact Q&A secret.

What Bash really did was to expose the fact that the FCC did not have an enormous stack of different tests in use. Prosecuting him would have publicized that fact and probably greatly increased sales.

All academic now. Bash's actions are ancient history. No way is the FCC going to get involved in ham testing in the foreseeable future other than retesting as part of enforcement actions.

I would think that a 23db power advantage to the other mode might do
it.
(5 watts vs 1500)

??? Well, when you finally get the answer let me know. I said nothing
about any such thing. I said that once it was much easier for a ham to
become a radio engineer since the technology was easier to learn.

Using tools to make tasks a bit easier is not the same as bypassing knowlege.
You'd still have to know something about propogation or antenna specs in order
to use the software Ed is talking about. The tediousness of hand calculations,
which are more subject to human error, is what's eliminated.

It's getting there. There's only one code test now, and that's 5 WPM for the class of licenses that require it.

Exactly. I agree completely with that statement. The bottom line
is that the cost benefit no longer justifies the need for trained
CW ops in military and commercial.

>Amateur radio does not have these economic considerations,

WRONG!!!

My personal time is absolutly under the same rules as
commercial/military indetermining what I do.

>but
>we still have to deal with the fact that learning and gaining useful
>proficiency in Morse code still requires a considerable amount of
>dedicated effort on the part of the operators who wish to use it.

Ageed.

>In
>the past, this effort was motivated and incentivized by the promise
>of increased operating privileges; now that that incentive has been
>removed, there will, for sure, be far fewer people even bothering to
>learn and gain useful proficiency in Morse code.

Probably true, but that is simply the FCC recognition that there
is NO justifiable reason to warrant having all new HF hams
learn CW to the degree warranted in the past. To wit...the FCC

acknowledges the cost to the individual can not be justified
by any rational to sustain the old requirements for CW ability
at 13 or 20 wpm.

>The Morse/CW mode continued to survive and flourish only due to
>the code testing requirement.

Which states volumes as to the true worth of the mode. It seems
you had to mandate code learning by all to obtain a small subset
of proponents. That's truly a waste of a great many people's time.

> In the absence of the requirement,
>the numbers of Morse/CW mode users will most likely shrink to a
>small fraction of their present numbers, at least in the United States.

That is then your own problem (if you see it as a
problem at all).

>European/Asian/African operators don't seem to have as much of a
>laziness problem as we Americans do.

So why is it that so many countries are now moving to end all
but a 5 wpm test?

Cheers,
Bill K2UNK

Hey, don't ask me. Take it up with your "Good Op" Hans. Here's what HE
said:

"I like all those ideas, Jim, except the one about publicizing the Fists
freqs. I've abandoned any operations anywhere near xx.058, because once
a Fists member "collects your number", the contact usually comes to a
quick conclusion.

73, Hans, K0HB
Fists # 7419 (I think)"

For someone who claims not to be concerned with things, you certainly contradict yourself in your responses. I really don't think you remember what you write from one day to the next. I guess it figures that you wouldn't remember me from when I posted several months ago, and at that time, posted my callsign. (Remember the little exchange we had about your complaining about Kim's "vulger" callsign, and then your using the "F" word in a posting? Do a deja.com archive search, if you like)

So how many more contradictions can we expect to see from you?

>
>
> If you spent a half hour per telephone contact, 8 hours per day, 5 days
>per week for 52 weeks per year, you'd talk to 830 hams.

Hey, any time I've called Ed on the phone he has never given me
1/2 hour of histime. Am I not getting my monies worth from my
ARRL membership? :-)

>> Secondly, please forgive me for not also explaining that my contact with hams
>> also includes a lot of travel to conventions, and local club meetings. During
>> that travel, I not only talk to a lot of hams, but I wander around a bit and
>> look at what is going on. I do not see evidence of "they won't learn anything
>> more than what is on the test" as you describe. That is "can't do" and what I

>
> If you attended a hamfest or club meeting every week for 52 weeks and
>talked to 30 persons per meeting you;d talk to 1,560 hams in a year.
>All in all, not any overpowering percentage of licensed hams.

I've seen Ed talk to hundreds at a hamfest. To suggest that
someone like Ed would only talk to so few people in a hamfest
setting is a joke.

>> How could I possibly see so
>> much hope and enthusiasm in hams, yet you see none?
>

> Once again, you misstate my position. That is not at all what I said.
>I said that you don't see all the hams out there who just want to be
>hams, and don't have the training nor the refined technical skills to
>get involved in your mission of "high tech for the masses", nor will
>they ever get very deeply involved in it for that very reason. It is NOT
>a simple matter and everyone except the promoters of the Agenda know it.

Dick must have some special dailog with all those "other"
folks that Ed and the rest of us never meet.

And...there's that "agenda" silliness once again.
What agenda Dick?

> Oh, the Agenda is not a formal document nor even a clearly stated
>position, it is just an attitude. It basically says, but certainly is
>not limited to, "get the ARS away from CW specifically, and into the
>world of high tech, never mind anything else".

Gee Dick, I must have skipped that chapter in my ARRL
manual and the FCC part 97.

>It ignores completely the
>practical aspects that characterize almost every ordinary ham. He wants
>to use ham radio as he recognizes it, which is to say that it IS an

Well Ed...I guess if you don't have an SRO crowd then
you aren't doing a good job for us. All those others that
don't sign up to hear your talk just have no need for
it because they march to the sound of a differnet drum...which
only Dick knows about.

> Please

>venues that we actually need it in ham radio? I don't think so, and
>neither do they.

Dick... modernize is eactly what hams have been doing
for decades. The fact that some wish to still use (and enjoy using)
older technology is their personal choice. The problem for hams
as a large group would be if hams as a majority took such
old technology approaches. It's that simple. Many hams
migrate to new technology as the new equipment finds its
way to commercial availability. That too is nothing
new.

Cheers,
Bill K2UNK

Even then it is likely that the FCC will ask that the applicant be retested by
a VEC, either by specifying the VEC or by making a stipulation that it be a
different VEC than coordinated a questionable test session.

I wonder when the 20-13-5 WPM test was in place, how many hams learned just enough to pass the test and then abandoned the mode? It would seem that the number of proficient operators would have declined in spite of the mandatory high-speed testing.

>The Morse/CW mode continued to survive and flourish only due to

That's probably because the European/Asian/African operators want to get all of those American 10-10 numbers that you find so despicable. That's *their* incentive.

>and ARRL. The repeater situation should have never been allowed to
>degenerate into the sort of situation where all pairs are tied up while
>there is mostly silence on those bands, and much of the activity one
>does hear makes you want to turn off your HT.

The problem is not even one of certain repeaters being off the air completely, but the pair not relinquished (although that does happen). What about the repeater that really is used once a month for an on-the-air club meeting, and a few minutes here and there. That can be an important use of a repeater, and I think that it is apporopriate to accomodate it. THe problem could be that there are more people who want to do that than available pairs, so some cannot get access to repeater spectrum at all.

> But of course your discussion above addresses VHF/UHF, and not HF where
>there is simply no reason to even consider such a change-unless it is
>considered to be necessary just because the modes in use on HF must be
>considered old and obsolete, thus unusable.

The modes on HF may be old, but I do not consider them to be unusable at all. IMHO, the strength in amateur radio is in our diverisity and although I believe it is important to add new modes to amateur radio as they become available in the "real" radio world, I believe that it is important to consider their compatibility with existing useage and modes and add them in a way that minimizes the impact. But adding them is important because I believe that Amateur Radio will improve upon their implementation -- the technical part of the value of Amateur Radio to the world at large.

> That's an attitude attributable mostly to people who spend most of their
> time trying to change things whether or not they need changing instead
> of using HF ham radio.

I am sure that most of those who want change can give you more reasons that change for the sake of change. I have given my principle reasons above. And I am fairly active on HF CW, near the QRP frequencies.

>> I will speak only for myself, Dick; I have never suggested that you need to
>> dump anything that interests you.

> This little scrap has been ongoing far longer than I've been on usenet.
>I don't mean to attribute any particular part of it to you personally,
>just that you have shown that you agree with the thrust, that ham radio
>is derelict in having not widely adopted all those new modes which have
>done so well in commercial and government use.

Sure I have, but that does not mean that I am forcing you to dump what you are doing. I do not want to dump what I am doing; I am just making an observation.

> Overlooked is the widely diverging orientation between ham radio,
> especially HF, and those other services which have largely abandoned HF.

I tune off the ham bands, Dick, and I hear plenty of signals. Surely your antenna can't be that selective on receive. And that divergence is NOT overlooked; it is the reason that I believe what I do. I do not believe that it is healthy for Amateur Radio to be becoming more and more different than the "real" radio world. We never would have been created in the first place if we were so different, we would not have survived the times we have been taken off the air for various national emergencies if we were so different at the time and that difference will not help us to justify spectrum that is becoming more and more threatened. Those are my reasons, Dick, not change for the sake of change, not forcing other hams to my Agenda (whatever the heck that is supposed to mean).

> I believe the main reason for that is there is largely no need felt by
>most hams for ir, particularily on HF. And most of the spectral problems
>on VHF/UHF are because of outdated schemes and regulations instead of
>modal shortcomings.

On HF, I think the main thrust will be first in the area of digital voice. I think it important that some hams be experimenting about it, and I think it important (note important <> forced) that hams understand the principles on which it operates. When future rules changes may be put forth by the FCC about these modes, I think that the amateur community's comments should be correct and appropriate.

> That doesn't mean that there is no benefit at all to
>making wholesale changes, just that there is no demonstraded need.

I do not think that we need to make wholesale changes, Dick. I have said that I believe that it is important that amateurs know the fundamentals of these modern communications techniques. I think it important that some amateurs begin using these modes, and out of that use and experimentation, I think that balance and the appropriate changes to Amateur Radio will naturally evolve.

> The "installed base" principle DOES apply.

Yes, it does, a factor that was very much recognized by the FCC when they chose to retain the 70 cm and above limits on SS. I agree with that decision, although I would like to see some accomodation made for SS on HF, too. I think the subset of those that might experiment with SS on UHF and up may be different than those that would do so HF. The nature of SS implementation would be significantly different on HF than it would be on UHF.

As SS does become more used on UHF (and I sure hope it does), the advantages and disadvantages of the mode will become better understood by amateurs and, if it is as good as the proponents say it is, then hams will glom on to it pretty quickly. If not, it will die a natural death. Do you agree that to be appropriate? If it does have significant advantages, it may very well replace the VHF repeater schemes in use today, although I believe that some spectrum

should be reserved for such operation (diversity is important).

> The political problems on VHF/UHF might be releived by changing to SS
>but look at the huge cost involved for the small benefit, and I really
>don't think most hams would benefit at all.
I am not sure the cost will all that huge, nro am I sure that the benefit will be all that small. I don't know, and I don't believe that you do either. I do know that if hams are to remain valuable to mainstream radio, they need to learn what mainstream radio is today, and SS and other digital techniques are very much a part of it.

> I see it as merely "change for the sake of change".

Yes, it is change, and we need to change, Dick. But I am proposing a change of adding knowledge to the base of Amateur Radio, adding diversity to Amateur Radio and under rules that exist right now, doing so in a way that doesn't force anyone to do anything. For the life of me, I can see why you think my views to be so onerous.

> With the serious decline in use of much of the
>present repeater system having occurred I doubt if much activty would
>survive.

Would there be more repeater useage if none of those who wanted to put up a repeater were told they can't? How much use would you make of HF if you were told that you would not be given the use of a frequency to do your thing, but would have to join in QSOs already in progress?

> Would I buy a completely new VHF rig to replace the FM rig that
>I rarely use now? I seriously doubt it, unless some new factor became
>involved.

No, you could continue not using your FM rig if you wish.

> Replacing all the FM gear now in use is a huge project that I
>just don't see happening at all, wsithout some more compelling reason
>than just updating the technology.

Perhaps the compelling reasons will be found if the FCC carries out whatever is promoting people like Hatfield to tell us that we need to modernize. Perhaps the compelling reason will be found on 2.4 GHz as the upper part of the band fills with spread-spectrum devices by the millions.

>> >We've listed dozens of other objects which are
>> >also obsolete, and are still in universal use today, but that makes no
>> >difference.

>> Yes, they are in universal use today. How many of them are a mandatory
>part of
>> testing for any priveleges, amateur or otherwise?

> How many match the unique attributes of radiotelegraphy?

I assume that if you listed them as justification for retaining the CW tests, they had some relative bearing on CW tests.

>> >It is clear that the entire movement to "modernize" is nothing more
>> >than another push to get rid of the code.
>>
>> Is that what you think that retired Dale Hatfield from the FCC was seeking
>>to do?

> Of course not.

Then what do you think Hatfield was trying to accomplish?

> On the other hand, I sure do believe that he has been greatly influenced by
the
>stridency of people like Carl Stevenson. Don't you?

No, I do not. Carl may be expounding some of the factors that have influenced Hatfield and the FCC, though. If you think that Stevenson's views carried more weight with the FCC than does the fact that modernization of radio is taking place all around us, to alleviate a growing spectrum shortage, then you are, IMHO, quite incorrect.

> After we've been flatly told that "a few people can change the world and
> just did"? After FCC near-totally ignored the ARRL BOD in the restructuring
> decision and gave NCI almost everything they
>whined for and some they didn't?

To what extent that would have happened without NCI, I don't know, but I think that the FCC really did want to reassess whether it wanted to retain Morse code testing in the Amateur Radio Service in the light of the fact that Morse code use under its jurisdiction in all other radio services has virtually disappeared. Had the Amateur comments been overwhelmingly in support of what ARRL had proposed, its views would have carried more weight.

>> There's that "agenda" thing again. Do you really think that the only
>reason I
>> say that I believe more hams should learn the fundamentals of modern
>> communications technology is to "get rid of the code?"

> No, Ed, you're not nearly the main part of the problem. You're only a
>side feature of it, in that you have decided to agree to cave in to the
>shrillness that is total opposition to ANY Morse code operational test
>requirement.

Dick, have you ever known me to cave in to anything? I find it hard enough to walk away from a discussion here. Those who know me well know that I am as stubborn as they come.

I don't understand why you believet hat I am in total opposition to any Morse code operational test requirement. What gave you that idea? I have said a number of times (gosh, it is getting tiresome to have to repeat things so often) that I believe that amateur testing should contain 5 minutes of sent Morse text with a reasonable number of questions about its content, included as part of the overall score. That would test Morse code to the same extent that

other modes are tested. It is difficult to have a discussion you when you imagine I said things then disagree with me for saying them.

> Evidently the entire ARRL heirachy has.
The ARRL heirarch has decided to accept the inevitability of the removal of the Morse code requirement at the international level. It has decided that it is not changing its position wrt US testing at this time. It is difficult to have a discussion with you when you imagine what the ARRL Board has decided and then criticize them for doing so.

> Three or four years ago, not long after I first landed on this NG I
>said something about "Where's the beef? Why isn't there any gear
>available to actually use if these glitzy new modes are so great? When
>are some of the strident advocates going to put their expertise where
>their mouths are?"

A very good question. The needed rules changes went into place a few years ago. I am disappointed that more progress has not been made.

> If they are in fact all that beneficial and applicable to ham radio why
>are there NO renditions available today on the market, even as kits?

There are thousands and thousands of spread spectrum devices that operate on the ham bands, Dick. Soon, there will be millions.

> I looked over the TAPR website you gave, and yes indeed, I believe it
>is proper to add a few questions on that material to the question pools.
>But the tests, instead of being reduced in scope and number of
>questions, would be better expanded when including new material,
>otherwise they actually are being reduced in scope of coverage.

I think that out of 1200 questions in the pool, it should be possible to cover the subject pretty well. Even if no questions about these topics were added to the pool, I am sure that some hams will learn the material on their own, for their own reasons.

No, but I don't have to feed my horse oats; I don't own a horse. :-)

Of course, I do heat 100% with wood, so I am not opposed to archaic. But I don't think that everyone should be forced to take a firewood splitting test before they are allowed to heat their homes with oil.

Watch those analogies, Dick; it is real easy to think up analogies that appear to apply to either side of this.

I agree, Dick. Larry was saying that if a CW signal goes up against an SSB signal, the CW signal will lose. I believe he is incorrect.

The 23 dB might be a bit optimistic, though, unless the CW receiver really is using minimum necessary bandwidth. Although in wider bandwidths, some CW ops have a decent "mental" filter that can gain back some of what a measurement would say isn't there.

Sicko crap snipped.

I don't get it, Hans. You're making a funny over handicapped people?
Maybe you're prepping for the Howard Sterno show. Just when we thought
the world was ready for more "Good Ops," we get Hans.

Apparently, "Know Code" doesn't mean squat anymore. Its being degraded
by the very people who prize it above all else. What are the rest of us
who consider it just another mode to think?

>existance.

I hate to tell you this, Dick, but if the FCC removes the code test altogether at some point, "positive thinking" will be the main tool we have to promote CW use among newcomers. That is true even today; those who pass a test will not be inclined to try the mode if all they hear and read about CW is that it a difficult thing needed to be a test of character. It is hard to undo that damage once it is said.

>
There'a a lot of completely wifty mythology floating around about what
actually goes on in those " Lower 25 Extra DX Sanctuaries". 99% of the
comments I see posted in this village on the topic clearly demonstrate

that the commenters have no bloody clue, they've never operated there,
or they've never listened there, or they didn't pay attention if they
did listen, or they can't decode it, whatever but they know all about
it. Fact is that the lower 25s are NOT high speed cw countries nor are
they some fancied, "exclusive dx windows".
>
True, the dx tends to hang out below .025 but certainly not
exclusively. Many of my rarest catches have been well above .025. The
speeds used depend almost exclusively on the speed used by the dx
station and/or the prevailing band conditions. Yeah, you bet, you
don't work long path JAs on 80 at 40 wpm, more like 10-15 wpm if that
fast.
>
I'll be happy to qso Cecil at 5wpm on 7.002 or 14.002. When the qso is
over nobody will even notice let alone "get spanked" and absolutely
nothing will have been "proven" except that we participted in the Ham
Radio Non-Event of 2001. Bleh.

...someone sent me a message in private e-mail. Without revealing
their identity, I'll address a few points in public -

>Does a spelunker know more about caving than a non-spelunker?

Amateur radio is not about cave exploration but some amateurs
have been a dark cave too long...

>Does an attorney know more about law than a non-lawyer?

Amateur radio is NOT a profession. It is a radio activity engaged
in NOT for pecuniary purposes. Lawyers often bill clients for as
much as, well, the law allows...

>Does a pilot know more about flying an aircraft than a non-pilot?

Although pilots are licensed by a federal agency, there is NO
resemblance between the tests and skills required for piloting
as compared to even the highest "upgrade" in US amateur radio.

>Does a fisherman know more about fishing than someone who has never
>baited a hook?

Actually, yes, fly fishing comes to mind. :-)

>You are absurd.

No more absurd than the US civil radio regulation agency NOT
requiring its Commissioners or staff to hold amateur radio
licenses.

No more absurd than the thought that an amateur radio license
grant entitles them to be expert (or even knowledgeable) about
gun control, politics, voting procedures, or everyone's morals
and ethics. All of those subjects have been "argued" in this
newsgroup. Absurd indeed!

The fallacy in the unamed correspondent's reasoning is that
radio is NOT exclusive to amateur radio and amateur radio
activities are NOT secret, nor are they at any higher plane of
radio arts than other radio services.

>> Seems to me that such an attitude turns people away...unless
>> they like living under self-professed, self-appointed non-comms
>> with a superior control-freak compulsion.

>You mean the kind of attitude which provides free instruction on the
>"how to's" of amateur radio and assists someone who knows nothing about
>amateur radio in obtaining a license?

While it is considered thoughtful to "elmer" a newcomer, the chances that such newcomers "know nothing about radio" is very slim indeed. A case can be made for newcomers knowing nothing about amateur radio but such introduction can be done with any one of several books or an Internet session accessing the ARRL website.

What turns away newcomers is the patronizing arrogance that They and only They "know what is best for all amateurs" and that all newcomers should follow their example and experiences.

>Follow orders? Our way or die? You are absurd.

Not me absurd. What is absurd is the continuing rationalization of the already-licensed to "do it as they did it" without question for that is the "correct way."

What is more absurd is the maximally-upgraded radio amateur trying to say that testing should be as they were tested...even though they will never have to take a single amateur radio test in their entire life. Such is an extreme case of "doing it as they did it" for no other reason than they feel they "control" amateur radio through license tenure.

>What the hell are you ranting about, Len? Is it your opinion that
>licensed radio amateurs should sit here and read material written by a
>non-amateur which attempts to tell those who have been radio amateurs
>for decades how it is and how it should be?

In a sense, yes, for several reasons. A clarification: I do not presume to dictate communications practices as they are done on the air except for the gray area of bandplans that separate classes of licenses.

Another clarification: The FCC tells ALL radio amateurs what regulations are, permissible bands and modes, and some of what is permissible communications in addition to granting licenses. ALL of that yet not a single FCC employee is required to hold an amateur radio license.

I am referring to REGULATIONS set by the FCC in regard to amateur radio LICENSE TESTS. Those amateurs who took tests "decades ago" did not take tests under regulations of today or the near future. Newcomers will.

As far back as a decade ago, the FCC said that it did not consider a morse code test as a true requirement to show them that an examinee was worthy of an amateur radio license grant. They said essentially the same thing in 1999. The FCC is required to keep a morse code test due to an ITU-R standard, a political situation, not one for licensing.

>You speak of egos. What
>kind of enormous ego demands the respect which you seem to feel is due
>you by us based on your past military service and your experience as an
>engineer?

Not a big ego here, certainly, but it is obvious I've punctured the self-centered, self-professed amateur "experts" who expect all kinds of respect based solely on license tenure...without any evidence of having learned anything new since test time.

US amateur radio is NOT a military service branch. There is no true rank, yet the "upgraded" assume more "rank" than "lesser ranks and are not hesitant to say so. That is not respect for a fellow radio amateur.

US amateur radio is NOT defined as some living museum of antique radio standards, modes, procedures, or anything else yet the "ranking" members seek to keep the old, resist change, yet prattle on about "advancing the state of the art" and "saving lives through amateur radio morse code ability" as if there were another Titanic awaiting rescue. This is the year 2001, not the year 1912. Amateur radio is a hobby, not a living museum or a public safety radio service defined in Part 90, Title 47 CFR.

Radio spectrum is regulated for ALL citizens, not just radio amateurs. Radio amateurs think nothing of voicing their opinions on other radio services and certainly on other subjects having little or nothing to do with radio. Why should amateur radio be "immune" to comment from those who do not hold amateur licenses? Why should amateur radio be sacrosanct from criticsm of any kind?

But DSP removes the need for a lot of specialized SSB hardware.
The hardware is completely generalized. The software is specialized
and can be loaded depending on the mode selected.

Yes,

But do they still require 13 and 20 WPM for advanced and extra?
Hopefully, they will do away the code requirement all together at the next
ITU meeting.
Code should be an elective mode.

>following the restructuring.

Why isn't that pre-April-15 analysis nit-picked in another huge
posting? :-)

>> The total number of code-tested US ARS licensees is decreasing.
>> The number of non-code-tested US ARS licensees is increasing.
>> It has been that way for over three years..
>
>Nobody questions that. The probelm is that you unnecessarily misstate
>both the increase in "non-code-tested" and the decrease in "code-
>tested" by a very significant percentage.

Not a significant percentage compared to the ARS licensees as
a whole or by license class.

The whole point of the first post in this thread was attempting to
point out that the number of code-tested licensees are
decreasing while the number of non-code-tested licensees are
increasing.

You agreed to that but went on at great lengths, very great
lengths to do practically a word-by-word critique in order to
show I was "wrong." That seems to be a great hobby with
the code-tested licensees since others have fun the same
way trying to prove all no-code-test advocates "wrong."

Denial is the psychological syndrome of your activity.

<snip>

>> >End result is that your numbers are way off.
>>

See? :-)

>> I am not ASSUMING anything about "renewals" or expirations
>> or anything else,
>
>Yes, you are. You are assuming that ALL Technicians are "noncodetested"
>even though it is clear that thousands of them ARE "codetested".

Now how can I be both "wrong" and "right" at the same time?
:-)

>> >The number of new Technician licenses proves one thing: Most people
>> >starting out in ham radio do so by getting a Technician license.
>>
>> How do you KNOW that?
>
>Simple: Most new licenses are granted to new hams. Most new licenses
>are Techncian licenses.

But not ALL of them. :-) Please count the Novices, Generals,
Advanced, and Extras prior to April 15th. [I did that for you but
it's best you do it yourself...try the raw FCC database to avoid
any possibility of error]

>Sure. Just look at the "new licenses" page on the AH0A site. It's right
>there.

I did that. I said that. You did not acknowledge that. :-)

>Sure - plenty of them. See the above page. But the most new licenses
>are Technicians. Nobody disputes that.

Yet you make such a fuss over numbers after April 15th...and
concede that numbers are okay prior to April 15th?

>It's not the future that is in question. It's how many upgrades have
>occurred in a given time period. The Speroni site doesn't say.

You can calculate that yourself. The raw data is available
to everyone with Internet access to the FCC website.

>Then you ARE predicting the future when you make statements like the
>one above.

There's a difference. As an example, a Bode plot may show a
breakpoint where frequency response begins changing. One
can consider the new slope of the Bode plot to continue on with
the new slope. One can liken the plot to a "trend." On the
other hand predicting some percentage renewal is akin to saying
that there will be another breakpoint with a different slope on the
Bode plot...except we cannot see it yet. The we-can't-see-it-yet
is the "renewal."

>Unless the conditions change in that time period. Like the fact that
>the first post-Feb-14-1991 Technician licenses will start to expire

>very soon.

It is fair to say that you will probably enjoy that. :-)

And the more the merrier for the code-test advocates. :-)

>All I'm doing is pointing out some easily-avoided errors in your
>methods.

All I did in reply to your "error" statement was try to establish
the basis for the original thread posting. Since you apparently
don't like no-code-test advocates of most kinds, that became
an ISSUE of great magnitude to point out "errors" as you
did. In effect you changed conditions to suit whatever agenda
that you had (presumably to show code-tested licensees in a
better light), concentrated on the period following April 15, 2000,
and condescendingly "conceded" the trends shown in the years
prior to April 15, 2000.

Despite the strong efforts at denial, the unfortunate fact is that
the number of US ARS code-tested licensees are decreasing
and the number of US ARS non-code-tested licensees are
increasing. It is "unfortunate" for those who strongly favor
morse code testing. It is expected by those who do not favor
code testing.

>I have no idea what you are talking about, Len. I'm just pointing out
>some easily-avoided errors in your methods.

...and I pointed out the ERRORS in your own "analysis." The
fact of Who is What has been lost in the fury of trying to show
error-error-error. :-)

>No, it's more accurate because the method takes into account relevant
>data that your method ignores. The errors introduced by your methods
>and assumptions are significant.

The use of "significant" is subjective, not a good analytical tool
to show absolutes. You are committed to showing absolutes
by as much detail as possible in order to show code-tested
licensees as "better."

>No, they were reasonable estimates.

:-) :-) :-)

>> No sh*t?
>
>Why the vulgarity, Len?

Is the word "shot" vulgar?!? Oh, my, that will not sit well with
anti-gun-control advocates!

Jim, "code" is a four-letter word. :-)

>> No sh*t?
>
>No reason for that, Len.

Ok, ok, shooting is noisy. I'm sorry your ears hurt. Apologies.

>I have no idea what that is supposed to mean. What is a "job
>technician"?

Electronics industry description of a technician, most often
called "electronics technician." As opposed to the amateur
radio license category of Technician class.

>> and "many" of the existing Techs will drop out,
>
>That's not what I wrote. 5% per year is not "many" - it's one in 20.

Ok, if it's okay for you to change original conditions then it
should be okay for me to change original conditions on you. :-)

How many of the General-through-Extra license classes will
drop out. None? Some? Define "some." How about 5%?

5% isn't many or some, it's just one in 20. :-)

>Never claimed that at all. What IS your problem with Morse code, Len?

My problem and that of many others is that a test for it is in
the regulations for any license having below-30-MHz privileges.

>The whole code-test thing is a dead issue. FCC reduced the code test
>for a US ham license to the absolute bare minimum under the treaty back
>in April.

ITU-R standard S25.5 does NOT specify any morse code rate at all.

The code-test issue is NOT dead...but a denial syndrome is evident
by you saying "it is a dead issue."

> Their comments, and their actions for the past 20+ years make
>it clear that the treaty is the only reason they kept 5 wpm testing.

Error, error, error? The 1990 Report and Order creating the Technician
class stated that the FCC did not consider a morse code test to be
relevant to their determining an amateur license grant. The FCC said
almost the exact same thing in the 1999 Report and Order concerning
US amateur radio restructuring. That is 11 and 2 years, respectively,
not "past 20+ years."

>Unless FCC decides to ignore the treaty, no more reduction will occur
>until the treaty changes.

Incorrect. The WRC working groups in the ITU-R may decide to delete
or amend S25.5 in the very near future.

"The Treaty" refers to the US adminstration's acceptance of membership
in the ITU. Standards defining amateur radio are the relevant items

which may or may not have a basis for the FCC changing amateur radio regulations. There is no separate "treaty" with the ITU-R in regards to amateur radio.

Meanwhile, newcomers are tending towards US amateur radio licenses not requiring code tests and the numbers of US code-tested amateur radio licenses are decreasing. You DO have a problem accepting that.

You are quite correct that most new hams enter ham radio under the NCT license.
You were incorrect in assuming that all Techs in the database have not passed a
code test.

>The US is one of few countries that has actual sub-band allocations;

How many other countries have as many hams as the USA with HF privileges and power greater than QRP? Think about WHY the USA has subbands.

>they sort
>themselves out by band plan.

They are supposed to - but the foreign 'phones are now down below 7050, for example.

There is also a growing philosophy of "if it's not prohibited by the FCC, I'm gonna do it, don't tell me about no steenking bandplans". I have seen it here and elsewhere.

>His basic recommendation is that the rules say
>"these are your bands; stay within them."

That's not the end of it. He wants NO "support for legacy modes". Translation: If your QRP CW signal gets buried under his highpower DSSS signal, too bad, you should get with the program and stop using the legacy mode.

>Unfortunately, what works in some
>countries would possibly not work in the US. On 160 M, for example, the band

>plan for CW operation is regularly stomped on by phone operators, some who
>know
>better; some who do not.

Agreed. The best system I can think of is to have subbands-by-mode, not by
license class.

> I think the same mentality that drives the Know Code
>=
>no Ham spams would show up with a small, but very noisy, group, who could
>make
>it rapidly unworkable.

It is the phone boys who stomp on the CW folks in your example, though.

>Why, even our Cecil wanted to engage someone in a 5
>wpm
>QSO in the DX windows, just because he can.

Maybe. One never knows. Except for myself, W3RV and K4YZ, I have no knowledge
that any of the regular posters here ever actually get on the air at all. (I
know about those two because I've worked 'em.)
>
>>he advocates the use or wideband
>>digital modes on the HF ham bands
>

Why? What are the advantages?

>He wants to give it carte
>blanche, however. Is there room for it on 80 M? How about 160M? How about
>30M, where some commercial stations could be already using it? How about 10
>M?

Doesn't matter. He wants a "free market of modes" - and that includes DSSS, not
just FHSS. No limits, and if the existing narrow-band users are interfered
with, tough.
>
>>and he goes off on anti-cw rants at

>>
>>Why should I do that? I'm not the one making the errors.
>
>Yes you are. You've changed the original conditions and
>then make a big case out of "errors."

How did I "change the original conditions"? Your first post labeled all Technician licensees as "noncodetested" (which I have proved to be not the case at all) and all other licensees as "codetested".

It is this mislabeling that I have contested. That's all.
>
>You avoided the pre-April 15 period counting in detail yet you
>HAD to make a big thing out of post-April 15 numbers.

You did not post the pre-April 15 numbers until later. You, not I changed the "original conditions".
>
>Too bad, all that "pointing out 'errors'" for nothing.

Not for nothing. Any reasonable person reading my posts will recognize and agree that you mislabeled several thousand "code-tested" licensees as "noncodetested". To be exact, you mislabled at least 3303 of them out of less than 14,000. That's a prettty big error.

> The
>newcomers are going for the no-code-test Technician
>license class and have been for years.

And I have agreed with that in every post. Why do you keep repeating the obvious?

>They are still doing
>it after restructuring.

Of course. The Technician was the easiest US ham license to get before restructuring and now it's even easier to get. And the privileges granted are extensive. So extensive, in fact, that the only reason to upgrade beyond Technician is to get on the HF/MF ham bands.

>Try to understand where US amateur radio is going for the future.

I thought you claimed that I could not predict the future, Len. Are you predicting the future?
>
>Denial of the obvious is not a good thing, benefits no one,
>cannot change official positions.

Then why do you keep denying the obvious errors you have made in your posts?

You're years too late. I imagine I've probably taken more ham radio
exams than most anyone around. I mean the question pool variety. Just to
see what they amounted to and to detect any errors.

> > But I'd ecpect the crowd you administer to is a different sort of

Of course they could, but of course that's not the only way they can be
characterized.

> > Away from centers of technical education and expertise, out where the

> a prerequisite to obtaining an amateur radio license?

No, I was a 14 year old high school freshman. And No, I do not. I
merely point out what Ed denies - that is easier to word-associate most
questions and answers than it is to learn the material. That is exactly
what Dick Bash had going in the 70's.

> As a VE and fellow radio amateur, I'm less concerned with how they learn the
> material than with whether they've learned the material. I'm in agreement
> with the FCC and the VECs that when someone passes the tests, they have
> demonstrated the requisite knowlege for obtaining an amateur radio license.

We all agree that is the objective. But it is clear to me that it
frequently is not met. I don't suppose it really matters, but what it
has done over time is to cause the validity of the testing system- and
many of its licensees to come under serious ridicule-from many other
hams. And I don't mean me, either. I frequently hear it on the air.

> I'm also congnizent of the fact that this knowlege represents only the most
> rudimentary aspects of amateur radio. But I feel that the balance is best
> learned in practice - with experience.

I suppose it was inevitable when they made the Extra class license
available with no experience requirement and with a test system of given
questions and answers, that inexperienced Novice type Extras would
result. So there is really nothing extra about today's Extra class
licensee.

I don't feel that the exams can be
> expected to determine who is going to make a good radio amateur because that
> is a matter principally of attitude. But, in my limited experience I have
> found that the vast majority of people who go to the trouble of studying for
> the exams have the proper attitude to make good radio amateurs.

No question that is probably the most important factor. With it one
will learn what he needs to know, but he still misses much he should
have gotten in study of material instead of just the pools. Sure, some
applicants do study other things. Most have no need to. They can pass
the tests, one at a time, by studying that element in the pools. You
don't get much detailed information in the pools.

>
> > Ed doesn't think that any significant amount of hams do it that way.
> > I'm sure they do. But it doesn't matter, as a VE if they turn in a
> > passing score your obligation is to see that they get the license, and
> > of course we did.
>
> Since there were no cheet sheets brought into the exam, you can be confident
> that the applicants had knowlege of the facts queried on the exam.

You can if you think you should, based on your experiences. I never
expected to come to the opposite conclusion, and it developed over
several years time experience as a VE. I saw things that all finally
summed up to it. All confirmed by the considerably lowered knowledge
level demonstrated by so many new licensees. As I said, it's not their
fault and I don't intend that they should suffer for it. But improvement
in the tests is way overdue. Problem is the VE QPC is also voluntary,
and effective changes to questions to make them so that they can't
easily be memory associated, as the few that Ed posted, takes a lot
scarce volunteer time, thus is unlikely.

These
> facts are deemed to be those which are the most relevant to amateur radio
> knowlege. If you feel the material covered by the question pools is

I imagine you're tired of hearing about it. Don't blame you, I'm tired
of saying it, especially when I get accused of spreading falsehoods.

So, no whistleblowers allowed?
I did offer to Ed to use one of his new defective Handbooks to form
some questions on new material, but he ignored me. I wasn't surprised.
But I don't own a new handbook, though I started to buy one at a hamfest
a month ago. But every copy each vendor had was shrinkwrapped in
celophane. Not even a single sample was open for inspection. And I guess
I'm just stubborn enough that I wouldn't buy one without being able to
look it over first. There was another ham, an older fella there also
looking at them. He turned to me and said, "That's like buying a pig in
a poke", and we both walked away emptyhanded. I bought Moxon's "HF
Antennas For All Locations" instead. ARRL would do well to send those
"bent cover" issues out to vendors to use as samples if they have so
much handling damage they have to shrinkwrap every copy. The new
handbook must not be a very big seller.

> Question for you: how did you first learn the resistor color code? Was it;
> bad boys rape our young girls but violet gives willingly?

That wasn't the way I first learned it as a ham, but it's how they
taught it in military electronics school.

Read my sentence above, Dick. Obviously, I never denigrated ham radio by saying that it is "just" a hobby. Because, like you said, it is more than just a hobby - it is a hobby that also offers a service to others (public service, etc).

But, since most hams already know that, I really didn't see the need to spell it out again. Furthermore, that aspect simply didn't relate to the context of the discussion (experts versus amateurs - which is what my sentence above was addressing).

By the way, several people (not Dick) have privately voiced dismay that defining ham radio as a hobby somehow takes away from its value, or the value of the effort they've put into it. Since others may feel the same, let me state here that I strongly disagree.

Much of the best aspects of culture has its roots in hobbies (art, writings, music, etc). And we can all be proud of our efforts to obtain that license (because of it, we know far more about radio and electronics than the average joe on the street today). And, finally, we can all most certainly be proud of our service to the public (very few people today do half as much).

The only thing taken away, by constantly reminding people that this is a hobby, is the elitist attitudes and behavior that so often drives people away (from anything - including ham radio).

Ed: I have never owned equipment useful on any frequency above 440 mhz
and I traded off my 440 rig because there was no use for it here. It
would shake me not at all if FCC took most of 440 and everything above
it. As I do believe will eventually happen, less the possibility of
some sharing.

IMO, they are also

The U.S. Unhindered have been on the air for a decade. Where are their
"altenative technologies"?? The only "alternative technologies
(modes)" I've seen in the past decade are the plethora of new and
rapidly emerging HF digital modes cobbled together by a multinational
collection of 12/13/20 wpm code-tested "dinosaurs".

I spent the evening today at our monthly RACES meeting. With Spring on
the way, it was also the annual "Storm Spotters Training Session", with
the house filled with non-ham sheriff's deputies, local police, firemen,
EMT's and other volunteer storm spotters. (We have lots of foul Spring
weather in the Midwest including your share of tornados).
The training session was conducted by a very competent young
meteoroligist from the National Weather Service. One of his points was
that ham radio operators are invaluable in the conduct of this program.
He noted that the regional NWS HQ where the regional doppler radar is
located has a ham radio station with at least one operator active each
time severe storms are anticipated, along with the many trained hams who
are weather spotters in the field, and that they consider this effort to
be critical to the success of effective weather warning.
You can regard that as hobby if you wish. I call it service.

Dick, you must have a reading comprehension problem, because I never described any such thing. I was addressing a very specific issue in that message - "expert" hams in a hobby radio service as those relate to license exams.

Beyond that, my comments neither addressed, or were intended to address, a description of any radio service. And, after reading my message again, I still have absolutely no idea where you came up with this CB nonsense.

Since you have agreed with me in this very thread that ham radio is a hobby, and every ham already knows that service is a part of ham radio, would you please explain to me what the heck you're talking about?

Since your question is a derivative of my comments, let me add my two cents worth. I think a lot of people do it for both reasons. When I got into ham radio, I did so with visions of contacting people in far off lands and was also very interested in the MARS program. Of course, since I went to Italy shortly thereafter, contacting people in far off lands was a lot easier than I expected. And, because of that extended trip overseas, I never really did anything about my interest in MARS (by the time I got back, the C.G. Aux had my interest instead).

And you might be amazed at how many of those people conversing on the radio are involved with public service. Ninety-five percent of the C.G. Aux communications personnel are hams. And good number of hams in this area are registered with civil defense. Of course, there is never enough people involved in public service, but there is still a respectable number of hams involved.

Sorry, but a rather large press corps and broadcasting covered
the event. I'm not stating anything that wasn't already reported
or seen by the administration.

>If you were at all
>personally involved in emergency preparedness you would know the extent
>to which police and fire have improved their ability to respond since
>the Oklahoma City disaster.

I was talking about the Northridge Earthquake of January 17, 1994.
The Muraugh Building bombing in Oklahoma City happend April
19, 1995, over a year later. Were you referring to "another"
Oklahoma City disaster?

> And you would also know the extent to which
>amateur radio is an integral part of the response plan in California.

I know of the California Office of Emergency Services and the
Auxilliary Communications Service, RIMS, SEMS, and the
federal SHARES. I have some unknown-currency information
on the activity of the California National Guards. Is there more?
Please, tell all so that everyone will benefit.

>But you don't know, and so you just make stupid comments about it in an
>attempt to vilify amateur radio. Who needs you?

No one needs someone who cannot argue, discuss, or even
debate a subject without trying to attack the person.

The nation of India has seen a truly terrible disaster in an
earthquake ten times and more stronger than the Northridge
Earthquake of 1994. That was seven years ago for the Los
Angeles area, plenty of time for all truly concerned to begin
planning for a similar real emergency. The Los Angeles area
was already so planned, drilled, exercised and did its task
well. How did amateur radio licensees help in this effort?

If there is anyone "villifying" something it is Jim Kelley who
seems to imagine more than what was ever said.

That was not a subject of my response. As a citizen-volunteer
myself on various occaisions, I've never asked nor demanded
"credit" or anything else. That was not the subject or intent (not
even implicit) of my posting.

>If, as you state, the usual public communications
>media are not damaged, then there is not as much need for assistance
>as there would be if the reverse were true.

The state of California has an Office of Emergency Services under
the governor and specifically for communications, the Auxilliary
Communications Service (ACS). The ACS has its origins in
RACES but has been expanded to include unlicensed persons
in the event of a real emergency. The California OES is also
involved with SHARES, the federal HF network...which can tie
in the state National Guard and the US military.

The standard argument from amateurs for Real emergency
communications is that "cell phones will be useless" as well
as the landline telephone system. That may happen in small
sections of the country during any emergency...but it also
presumes that the telephone system is the only communications
means. That isn't so, but it is convenient for the purpose of
achieving message points in a newsgroup. There are many and
varied ways to communicate in Real emergencies since there

exist many and varied radio services in addition to amateur radio.

The question to ask in REAL emergencies is whether or not any individual radio amateur's station or even part of radio equipment will survive. Such equipment is usually ready-built, purchased and not designed for emergency environments. Much of the professional/commercial equipment is designed for harsher environments. This includes antennas and towers.

To find out more about the California OES and ACS, link to

http://www.state.ca.us.

and look around the OES home page. [there's also a lot on the California energy problem]

> DUH! Every situation is
>not the same. In 1989 my area experienced a full blown hurricane called
>Hugo.

It is realized that REAL emergencies vary by region, locality, and with many variations of disaster. My comment to K4YZ emotional plea about the India-Pakistan earthquake concerned another earthquake that happened uncomfortably close to my home on 17 January 1994 at roughly a quarter to five AM. That particular earthquake killed 57 people, injured 11,846 others and caused over 40 billion dollars in property damage. One MHV power line tower toppled, cutting off ALL primary electrical power to about ten million of us scattered over an urban area of roughly 20 by 40 miles (estimate by self).

> ALL power lines were down. NO-
>BODY had power--some for as much as a month. Repeaters, both commercial
>and amateur, were off the air. Suddenly that service you denigrate as
>"just a hobby" became VERY important. Police and fire comms were either
>down or greatly hampered. Who filled in? The HAMS, that's who! THEY
>provided both backup comms and spare generators to the emergency author-
>ities. Where generators were not available due to the vast destruction,
>and the huge amount of traffic, hams used their mobile HF radios (me
>included)to augment what comms there were.

Yes, the amateurs came to the aid of the communities even though their repeaters were down (your statement). My comment concerning the Northridge Earthquake of 1994 did not state that radio amateurs were not helping. I asked simply "where were they?" They were not in evidence, either observed or on broadcast radio and television. Note: The tower causing the total electrical power outage was jury-rigged upright within four hours by utility workers but the entire area had to come back up through a "black start" (power term denoting putting the electric power grid up from a total absence of input). Electrical power was restored to about 90% of the area before midnight. Radio and TV broadcast stations were back on the air as soon as their emergency power

generators could be started.

Meanwhile, hospitals and medical centers had their emergency
power generators keeping health facilities working, the various
Fire Departments were never out of order, the various Police
Departments were never out of order (except for two patrol cars
caught on collapsed overpasses). Utility crews were mobilized
for repairs using their own radio system, as were many different
combined city emergency services. There is an emergency
communications center in Los Angeles that coordinates such
emergency work and it rode out the earthquake along with
many aftershocks.

> And if you think that the
>local governments and emergency management teams weren't grateful, you
>are mistaken.

You are trying to imply that I said bad things about radio
amateurs. I did not do so.

> If you could truly know how little you know, you would not
>post such drivel.

I know more than many radio amateurs about communications
in both regular services as well as REAL emergencies. The
California Office of Emergency Services is not in the "drivel"
business nor is the California ACS communicating "drivel."

I repeatedly asked the same question about a devestating
local earthquake big enough to kill 57 outright, hurting
several thousand others, and causing widespread destruction.
It was simply "Where were the radio amateurs?"

That was 7 years ago. I've been directed to a certain copy
of QST to "read all about it." Thank you, I was in the middle
of it, and got quite a bit of information from the local press
and broadcasting.

>Like it or lump it, sir, Amateur Radio is here to stay and enjoys the
>respect of governments throughout the world, as well as the populations
>that have benefitted from hams' volunteer service.

You have inferred far too much from my posting. I was replying to
an emotionally-fired posting concerning the very REAL devestating
earthquake centered in the nation of India. While the Northridge
Earthquake was not on the scale of the Indian one, it nonetheless
killed human beings, injured many, and caused billions of dollars
in damage. Why go into ranting of an India quake when the USA
has already had more than one in the last seven years?

Are radio amateurs REALLY equipped, trained, and ready-to-go
at every emergency, local, state, or federal? The California plan
for ACS allows not-licensed-in-amateur-radio to participate in REAL

emergencies. I've not seen that in RACES' plans. Perhaps you
can fill me in to avoid "drivel" repetition.

> As a volunteer, both
>as a ham and in other organizations, I resent your ignorant ramblings
>about ham radio, volunteers, and their contributions to the well-being
>of our communities, states, and Nation.

I've never ranted about any volunteer work by anyone...but I have
ranted about flag-waving, phrase-making repetitions of those who
were NOT in REAL emergencies...I have ranted about the chest-
puffers, the medal-wearers of non-accomplishment who have no
evidence of their volunteerism other than repeating the same trite
phrases of "value to the community." There's a BIG difference
between TRUE volunteerism and the bragging seen too often in
here.

The problems many radio amateurs face is an ignorance of the
existing infrastructure of both landline and radio communications.
They do not join in any organization as a general rule, do not
train because they are not members. They, as a general rule,
simply say "I am ready!" and don't understand that such chest-
beating is not enough. "Radio" is more than ham stuff, CB,
cell phones, and broadcasting. There is much more to the
entire radio community available for REAL emergencies.

>I am both proud and willing to serve when needed.

My US Army serial number was RA 16 408 336. If you know the
old system of the US military, the "RA" denotes a volunteer.
That was in 1952 to 1960. Can one volunteer MORE than one's life
for one's country? I don't think anyone can.

>Further, I have rarely heard one word of support for
>hams in your posts, rather your posts consist of whining and belittling
>subjects you so obviously know NOTHING about.

Translation: I don't stand up and cheer wildly when someone
mentions amateur radio...I don't repeat trite phrases of self-
praise for the "good of the service," nor have I memorized all
the self-promotional mantras of the amateur organizations.
REAL emergencies are unaffected by anyone's propaganda.

Sorry, I'm still a professional in radio who got started legally in
24/7 HF communications in 1953.

My main purpose on getting into this newsgroup was to argue
the elimination of the morse code test for the amateur radio
license test. Since that time a bit over 3 years ago, I have
been a target of personal abuse by those who cannot defend
the sanctity or need of the morse code test for an amateur
radio license. Since they cannot logically support the code
test as it applies to newcomers, they attempt abusing those

persons who wish to remove it.

>I don't have to get into
>it with you to make my point; you have made it already.

You must. You imagine that someone tried to tear down
amateur radio as, apparently, YOU KNOW IT, and want a
pound of flesh. Sorry, I cannot imagine what your imagination
conjurs up, only that you want to hurt someone physically
for imagined insults.

>My own hat is
>off to volunteers EVERYWHERE who do so much with so little, and receive
>barely a word of acknowledgement for their efforts. If I had to put up
>with that crap in person after I have slogged around in the mud dodging
>poisonous snakes for 2 days (like hurricane Floyd), I'd punch the a**
>hole in the mouth!!!!!!!! GRRRRRRRRR!

Just exactly who "slighted volunteers?" I volunteered to help in
searching the Veteran's Hospital collapse in the Sylmar
Earthquake of 1971. Nobody gave me any praise, coffee,
certificate of appreciation or anything else beside a handshake
and that was enough for me. I spent three days at the Sylmar
Veteran's Hospital rubble. You are free to call me all the names
you want, imagine whatever you wish (quite a bit), but physical
violence is going to be more difficult to accomplish than you
think. It won't make your imaginary case.

I'll ask again and expect something besides a reference to a
QST article. In the 1994 Northridge Earthquake where were the
radio amateurs? That was 7 years ago (plus almost a month).
I know where the professionals and commercial people were,
what they were doing.

Has anyone briefed themselves on the California ACS or the
OES, do they know anything about SHARES? Or is everyone
just reading what is written in ham organization literature and
then imagining what real emergencies are like, how they feel,
all the while sitting safe in their ham shacks...?

Gee, I know you're so much smarter than the average human being, WA8ULX, but I know I learned something by memorizing those questions and answers. And I learned even more by reading the rest of the book that contained those questions and answers. And I learned still more by further reading not associated with that license exam. And I learned still more from my experiences since obtaining that license.

A large part of learning is memorization, WA8ULX. I assume even you had to once memorize things as part of your learning process (but maybe you were too smart to need that). When we're children, we learn to speak by memorizing what others have said. Later, we memorize rules for spelling, shapes for writing, dates in history, formulas for math, theories for science, and so forth.

After we memorize all those things, we can then go forward to apply those memories to the real world (and perhaps if we remember how we applied them, we might learn still more).

Actually, there were articles in several ham magazines describing the efforts of hams during both of these incidents. No, hams don't "always" come through in every circumstance, Len. But large numbers do at least try.

Well, since ham radio is a hobby (and everyone knows that), the way to change that impression is to become involved in public service activities and perform those services in a manner that convinces people to take those efforts seriously.

Ah, Cottonmouths are not that bad, Jerry. I have a whole hurd of them in the creek behind my house. In fact, the snakes and the snapping turtles seem to have a feud going on since the first part of last summer. And, before the cold weather hit, the snapping turtles were winning - they attack the snakes from below as the snakes swim across the surface. A few strikes from the two to three foot snapping turtles and it is pretty much over for the snakes. At that point, a number of turtles move in to finish off the meal. It is amazing to watch.

To be honest with you, I'm not used to all this. While I have spent some time on the farm during my childhood, I'm mostly a city person. I never knew that snapping turtles grew this large. I never knew that snapping turtles ate meat and would attack living things in the water. And I darn sure don't like all the snakes in the area. In other words, this is way too much country for me.

Cecil, you really didn't expect logic from someone who posts and reposts the same mantra year after year did you?

The no-code folks love him; he supports their cause by making the pro-code folks appear bad.

Either that or he just figured that choosing that "side" would be the most fun and stir up the most trouble.

Either way, logic will not play any part of what he posts or any responses.

enjoy it at all.

> More than a year ago I recall him posting that he was going
> for Extra, had a new house with no antenna restrictions, the works.
> None of it has happened.

I can give you a list of things that I wanted to get done in the past year that
have not happened either.

>No articles on SS or anything else that I've seen, either.

That is, IMHO, much more unfortunate than his not getting an Extra. He
certainly has the ability to design that SS transceiver that seems to be
missing from Amateur Radio. Considering his technical talents, IMHO, that
would be a more unique contribution to Amateur Radio than his leadership of
NCI. Bill Sohl could take over, with his skills at politics, leaving Carl free
to make technical contributions. :-)

>How many other countries have as many hams as the USA with HF privileges and
>power greater than QRP? Think about WHY the USA has subbands.

The reasons I think the US has subbands have nothing to do with power level.
Most countries that have HF priveleges have power limits >> 5 W.

>They are supposed to - but the foreign 'phones are now down below 7050, for
>example.

And the US digital folks are now above 7050, for example.

>There is also a growing philosophy of "if it's not prohibited by the FCC, I'm
>gonna do it, don't tell me about no steenking bandplans". I have seen it here
and elsewhere.

That is probably the reason we have mode allocations.

>That's not the end of it. He wants NO "support for legacy modes".
>Translation:
>If your QRP CW signal gets buried under his highpower DSSS signal, too bad,
>you should get with the program and stop using the legacy mode.

That is pretty much his view. I disagree with him (Dick, please take note for future reference.)

>>I think that some FHSS needs to be permitted on HF.

>Why? What are the advantages?

The only reason I suggest that is that I believe that Amateur Radio should be engaging in as much experimentation as possible. That is one of many. Note my use of "some." Now, the way to do that could be via STA, but those that were doing anything with the last STA, if any, were not reporting their results widely.

>Doesn't matter. He wants a "free market of modes" - and that includes DSSS,
>not just FHSS. No limits, and if the existing narrow-band users are
>interfered with, tough.

That was pretty much his view the last time he posted here. Of course, when it comes to SS on UHF and above, the rules are very clear about interference.

>> There are some here who say some pretty bad things about
>>CW to justify keeping it.

>Lemme at 'em!!!! ;-)

You are quite welcome to join the "tag team." :-)

The FCC knows full well how question pools work. They apparently don't believe that vast hordes of hams are memorizing over a thousand questions without learning something in the process.

Today's licencees meet all of the accomplishments stipulated by law. What more are you asking them to do?

>>Not the Novice I took.

>You didn't specify which Novice.

1963, the same Novice I have talked about the many other times I have cited this tale. :-)

>The test I took required knowing stuff like Ohm's Law. The current tech does >not.

Ohm's law was on the 1963 Novice, but that really was just about it for techncial content. No questions about antennas, feed lines, SWR, propagation and a host of others that are on today's Tech test.

Ohm's law most certainly IS on today's Tech, Jim. The pool even has questions about the formula for Ohm's law, expressed both as E=I*R and in plain English.

>>I studied 4 pages and passed easily.

>I very much doubt you started out knowing nothing about radio before those >four pages, Ed.

I had dabbled in Electronics some, as a kid. But I don't recall anything on the test that was not virtually word for word what was on the study guide.

>And the number of pages is no indicator of the level of the material.

It was in this case. I had posted the entire study guide to this NG a month or so back.

>3) Because you were interested.

> That leaves 3). And the end result is an ARS with a few
> knowledgeable folks. Perhaps that is unavoidable.

I don't believe that every ham is interested in technology, Jim, but I think the interest level is higher than you think. People don't become hams because they don't want to learn. I would agree that the depth of technical testing may be less than it was, although that General required me to study 16 pages of study guide for a few weeks, so you tell me.

But that mile-wide river is a LOT wider than the river I had to cross when I got my General, and the entry level tests cover territory I didn't even know existed when I was first licensed. I found myself a year ago teaching the RF safety material to a Tech class and when I was teaching them the differences between the reactive near field, the radiating near field and far field conditions, so they could better understand how to answer certain questions, I

was amazed that this is what we require of beginners.

When I was a Novice, old Hub, W1BNB, handed me those 4 pages and told me to study them. Today, we hand people a Now You're Talking and tell them that THIS is what they need to know to be a beginner. I gotta' tell you, if I had been handed that book when I was 13 instead of those 4 pages, I wouldn't have become a ham. If we wonder why there are not as many kids in ham radio as there once were, compare the 4 pages to NYT and give me an analysis. The published question pools along take up about 90 pages in the book.

Add to that all of this bitterness about "dumbing down" that some are posting and reposting on newsgroups and elsewhere. Now, if someone had handed me the NYT book, but then handed me a General and an Extra and told me that NYT was a really easy accomplishment and if I wanted to be a "real ham" I would also have to learn that, too, and THEN said that it was all dumbed down from the 16 pages he had to study to get all amateur priveleges, I would have thought that hams were totally whacko and simply walked away. Some newcomers are subjected to exactly that treatment by some who probably honestly believe that they are doing Great Good for the Service by doing so.

>What W2ILP and many others are concerned about is that as the
>"average ham" becomes less operationally skilled and
> technically knowledgeable, our future is threatened.

I share those concerns. I just don't think that any licensing process could properly address them. The only way it could have meaning is if it were all incentivized, and I see no value into further compartmentalizing Amatuer Radio by license class.

The number of topics that SHOULD be known (not by individual amateurs, Dick -- by the Service as a whole) is greater than nearly any individual would be expected to accomplish. The depth of knowledge that could be known (Dick, this is not forcing you to have to learn anything, I promise) is greater than most hams would ever learn across the board. IMHO, once hams have met the requirements of our licensing structure, they are free to learn, or not learn, as they will. Look at the reaction here by one individual just because I said that hams should (not must) learn modern radio technology. Would you really want to see that reaction multiplied by encoding that Hare-brained idea into a license structure? I wouldn't.

I think that the best way to accomplish learning is to lay the foundation with testing and then rely on the very nature of the Service to take care of the rest. Things like ARRL's education and certification program need to be expanded past the one course they offer now on emergency communication. Tutorials in books or free on web pages abound on various technical topics, so hams can learn and do more.

Maybe what is needed is for folks to take steps to foster the development of a "can do" culture in ham radio (again?). I think some of what I have seen said here has had just the opposite effect.

Just another "whimper" from one of the gang in Newington. :-)

Source record: 3794

>From: Dick Carroll dixie@townsqr.com

>Sure, some applicants do study other things. Most have no need to.

Dick, you have no personal knowledge of what 99% of those who took tests before you studied. Your view of what they studied is speculation. You have often here offered the worst possible interpretation of people's words and then built a whole house of cards about what it meant. I am sure you are doing the same. Jim is apparently a VE, too, and he is not prone to wild speculation; his view appears to be more balanced and reasoned to me than yours.

>I never
>expected to come to the opposite conclusion, and it developed over
>several years time experience as a VE. I saw things that all finally
>summed up to it.

Just like your summing up of the things I didn't actually say here, Dick?

>Problem is the VE QPC is also voluntary,
>and effective changes to questions to make them so that they can't
>easily be memory associated, as the few that Ed posted, takes a lot
>scarce volunteer time, thus is unlikely.

I am sure that all of the questions that you have been sending to this group of volunteers you have oft' soundly criticized will help. Could you post the things you have sent to the QPC here so we can discuss them?

I also suggest that you re-read the question pool, Dick. The example I posted was about the best of them, but there are many groups of questions with very similar answers that cannot be word-association memorized, IMHO. If you will re-read it, I won't have to do another edit job to cut and past the relevant questions. Would you mind?

>If you feel the material covered by the question pools is
>> insufficient, then I'm sure everyone would be grateful if you were to offer
>> specific suggestions as to how that material should be supplemented.

> I imagine you're tired of hearing about it. Don't blame you, I'm tired
>of saying it, especially when I get accused of spreading falsehoods.

Is that really your answer to his question? It looks like a total non-sequitor to me. Did you cut and paste the wrong answer in composing the email?

> So, no whistleblowers allowed?
> I did offer to Ed to use one of his new defective Handbooks to form
>some questions on new material, but he ignored me. I wasn't surprised.

I was off the ng for several weeks, Dick; I do not read every post. Of course, with all of the griping you have been doing about the QPC and all of the errors you say you have found in the pools, you have been sending them questions all along, right? Could you post them here so we can discuss them?

>I bought Moxon's "HF Antennas For All Locations" instead.

I am sure you can write some excellent questions from that.

>I'm just stubborn enough that I wouldn't buy one without being able to
>look it over first.

I'll tell you what, Dick, if you buy the Handbook and don't like it, I will personally buy it back from you.

>ARRL would do well to send those
>"bent cover" issues out to vendors to use as samples if they have so
>much handling damage they have to shrinkwrap every copy.

Most dealers open one up and put it on display. The ARRL Lobby does the same. Of course, it does get a bit dogeared from the few who sit in the Lobby and read it so they don't have to buy one.

> The new handbook must not be a very big seller.

Seems to sell about as well as it ever did, according to my inside sources. :-)

> Well, since ham radio is a hobby (and everyone knows that),...(SNIP)

Ham radio in the United States is a SERVICE that is ALSO a hobby. It has specific basic criteria that it must meet in order to fulfil it's "Basis and Purpose".

That a great number of Hams do NOT participate in Emergency Services is a given, but those that DO help carry the day.

There are other aspects of Amateur Radio that meet the B&P splendidly, and it is the combination of all those factors that routinely save out bacon from the spectrum guzzlers.

>the way to change that impression is to become involved in public service activities
>and perform those services in a manner that convinces people to take those
>efforts seriously.

The problem is not here. It's there. But the "it's just a hobby" crowd are teh ones who undermine our foundation with the policy makers. You can build the greatest bridge, but pull the one keystone out, and all you have is a pile of rubble. Doesn't matter how well the rest of it was put together.

Yet Dick would be unshaken if the activities of hams who frequent 440
and above were done away with. It would be hard to think of a clearer
example of the destructive attitude I was referring to.

This was exactly what I expected. And exactly wny Lennie Anderson's true colors come out. This creep has no valid concern for the future of Amatuer Radio in ANY form.

>The professionals were prepared with "snazzy technology" which worked according to plan.

Yes, they did. And they weren't the only ones.

>Where were the emergency-prepared amateurs?

In the hospitals providing internal communications. At the fire departments. At the shelters. Not that YOU would have known anything about them.

>The Northridge Earthquake happened here 7 years ago. When the
>Great K4YZ was confronted with a description of emergency
>preparedness at work (about two years ago) he passed it off
>as "...small states cannot afford expensive emergency equipment"
>and some other minor rationales for His area not being prepared.

No, Lennie...YOU dismiss the idea that everyone had multimillion budgets for the gadgetry that you profess is so prolific in SoCal.

>The question still remains - Where were the radio amateurs here
>and a few years earlier in the Bay Area of middle California who
>have constantly kept the mantra of "radio amateurs 'always come
>through' during emergencies?"

There is NO question. It was in the written press, both Amatuer and popular media, on television (April Moell was interviewed at one hospital as they helped with internal communications) and on the radio (commercial broadcast, not 2M.

>Both Northridge and Loma Prieta earthquakes happend over 7 years ago. How much time is >needed? Or isn't the original post of this thread just some kind of emotional rant by someone >who can only function on the newsgroups and needs the forum for whatever personal >reasons?

"....needs the forum for whatever personal reasons?"......

HAHAHAHAHAHAHAHAHAHAHAHA

Coming from a CREEP like you, this is HILLARIOUS! This is your ONLY forum!

>Perhaps it is time to recognize that amateur radio is really only a hobby, an enjoyable hobby, >one that _might_ be of service to the community but not some fall-back activity given >lip-service for years but seldom done.

I am sure THAT'S how YOU percieve it, however, again, you dismiss the ONGOING support that Amateur Radio enjoys from COUNTLESS private AND governmental agencies for it's SERVICE!

Did he happen to mention that only those hams who passed a "real" exam
-- not the ones given during the last two decades -- are contributing to
the success of the NWS activities? If not, maybe the NWS can't tell the
difference between the "real"
hams and the others. Maybe there is no difference.

That's a given. Lennie is lost. A complete idiot.

>If you were at all personally involved in emergency preparedness you would know the extent
>to which police and fire have improved their ability to respond since the Oklahoma City >disaster.

Lennie can't prepare himself top take a good dump, let alone be able to respond to ANY kind of emergency.

How do I know this? Just look at all the crap he spews here. Not a bit of validity to it. Just more "I Hate Ham Radio And This Is How I Will Get Back At Them". Not a shred of truth to it.

>And you would also know the extent to which amateur radio is an integral part of the >response plan in California. But you don't know, and so you just make stupid comments >about it in an attempt to vilify amateur radio.

Tens-of-thousands of dollars are spent in CA to implement an Amateur Radio response in almost all aspects of planning where communications is involved. Of course Lennie ignores this...as he does EVERY fact that dispells his LIES.

And yes...Leonard H Anderson is a liar. Unmitigated. Unrepentant. Unrelenting.

>Who needs you?

Who indeed.

Had to stay up late so Mrs A the counsellor couldn't read over your shoulder and see what a patheic, pathological liar you are?

>For your benefit, my name is Leonard H. Anderson, not "Mr. Len."
>My mailing address is 10048 Lanark Street, Sun Valley, CA,
>91352...located in the eastern part of the San Fernando Valley
>area of Los Angeles.

Jerry, just call him "Lennie". Or Lennie NoCalls. Or Lennie the Loser. Lennie the Licenseless. As for his address...well...If I were one of his neighbors, I wouldn't want this creep broadcasting that information because it can potentially lower property values. Who want to live next to a creep like this?

>That was not a subject of my response. As a citizen-volunteer
>myself on various occaisions, I've never asked nor demanded
>"credit" or anything else. That was not the subject or intent (not
>even implicit) of my posting.

However YOU try to make some point of how Ham Radio allegedly wasn't a part of the recovery efforts in SoCal earthquakes just becuase there are no banner headlines "HAM RADIO SAVES DAY" in the LA Times.

>That isn't so, but it is convenient for the purpose of achieving message points in a newsgroup.

What "points", Lennie? In the last 12 months alone it's happened in three different areas of the United States, each time Ham Radio was used to supplement both commercial and Public Saftey nets. It happend. It's a fact. And it's contrary to YOUR rants that it doesn't!

> I asked simply "where were they?" They were not in evidence, either observed or on >broadcast radio and television

Oh...I SEE ! ! ! ! Just because they weren't upfront in the cameras, it "didn't happen".

I guess that since there weren't any "human interest" pieces on cooks and bakers during those events, no one got fed?

>The tower causing the total electrical power
>outage was jury-rigged upright within four hours by utility workers
>but the entire area had to come back up through a "black start"

>(power term denoting putting the electric power grid up from a
>total absence of input).

Lennie tries to impress us with his use of power company vernacular.

>You are trying to imply that I said bad things about radio
>amateurs. I did not do so.

Leonard H Anderson of 10048 Lanark Street, Sun Valley CA 91352 is a
LIAR....

Again.....

>I know more than many radio amateurs about communications
>in both regular services as well as REAL emergencies.

Now Lennie exerts his OWN "rank" on Amateur Radio operators. HE knows
more.

NOT!

>Why go into ranting of an India quake when the USA has already had more than
one in the >last seven years?

The point was NOT about emergency preparedness. It was about maintaining
a positive impression on the political arena that may hold sway over our
allocations, and even our existance.

>Just exactly who "slighted volunteers?"

You did. Shall we rehash your "Civil Defense is a joke" slurrs?

>I volunteered to help in searching the Veteran's Hospital collapse in the
Sylmar Earthquake >of 1971. Nobody gave me any praise, coffee, certificate
of appreciation or anything else >beside a handshake and that was enough for
me.

So you got dirty once 30 years ago. Go figure. Some of us have been
doing it FOR 30 years, and continue to do so to this day.

>You are free to call me all the names you want, imagine whatever you wish
(quite a bit), but >physical violence is going to be more difficult to
accomplish than you think.

At this point in time I would thing that a prudent man would stop and ask
WHY he invokes such a response in more than one person. Of course Lennie is
NOT prudent (eg: posting his address) and like others of his ilk, it's ALWAY'S
the other guys fault.

>Has anyone briefed themselves on the California ACS or the OES, do they know
anything >about SHARES?

Well, obviously you HAVEN'T or you'd know that each has a place for
Amateur Radio.

>Or is everyone just reading what is written in ham organization literature and then imagining >what real emergencies are like, how they feel, all the while sitting safe in their ham shacks...?

In as much as you have acknowledged NOT subscribing to one of the three major Amateur Radio publications in the United States, how would YOU know what's in any of that literature?

Nothing like facts to once again shoot a hole in Lennie the Liar's rants.

Putz.

There certainly is. That's because they're still cognizant of
their own "image." It's a main goal of institutions, especially
government institutions, to leave the public with the impression
that all decisions are arrived at logically. Unfortunately, same
organizations always manage to blow huge holes in that logic when
they get around to drafting their R&Os.

A second reason is that they're also cognizant of the touchy
political nature of the hobby as being "technical," and want to
stay above that fray. But again, the bottom line ALWAYS comes
out because sooner or later, they have to release an R&O.

Yes, especially if he's making money from such a botcott by promoting it on the
air.

I just told you, Jon. The political environment mandates that FCC doesn't come across as dictatorial, that they work with, not against the infrastructure in making logical decisions. Because when they're viewed as working to counter purposes, it stirs up an underlying issue with Congress as to whether FCC should exist at all.

It's strange that you chose that analogy. It's usually the people that have been driving for years that are in the way. You know the type; The drive below the minimum speed limit (45 MPH on most limit access freeways), they can't see over the top of the steering wheel, and when you pass them, all you see is the top of a head that has white hair on it.

WA8ULX should pay more attention to the rules and regulations part of the exams. He lived and operated from his current QTH for roughly two years before changing his address with the FCC.

Also from Webster's: "service - the act of copulating with a female
animal"

But neither of those definitions is applicable. The Webster's definition
that *is* applicable is:

service - a facility supplying some public demand <telephone ~><bus ~>

Jon

No, although that's a common misconception. See:

http://www.fcc.gov/cib/handbook.html#communications

wherein it says:

"The FCC was established by the Communications Act of 1934 as an
independent United States government agency directly responsible to
Congress."

Aw, shucks...no opportunity for a comeback?

IMHO, once hams have met the
> requirements of our licensing structure, they are free to learn, or not learn,
> as they will. Look at the reaction here by one individual just because I said
> that hams should (not must) learn modern radio technology.

Thats what you think you said, but youi forgot that you incoirporated
the output of two FCC officials on the same subject, and that was
included with your opinion. You already know, if you want to recognize
it, my beliefs on hte subjects of what hams should know.

Would you really
> want to see that reaction multiplied by encoding that Hare-brained idea into a
> license structure? I wouldn't.
>
> I think that the best way to accomplish learning is to lay the foundation with

> rest.

Which makes the validity and quality of the tests even more imppotant.

It does no good to have all these high flown beliefs if the
implementation of testing is inadequately poor. I believe it is. You say
you don't. The knowledge level of the "average ham", or lack of it, is
the proof.

That;s your story, and you're sticking to it.
But that's right- a large percentage of them become hams because they
want to talk on the radio, and not much else.

First off some huge percentage of all hams have no idea what ss is let
alone it's potential upsides and downsides. I'm quite convinced that
if they did understand ss and there was a proposal on the table to
implement HF ss there would be a major uproar in opposition.
>
Second, I'm not opposed to ss as a mode if used in appropriate chunks
of ham spectrum space. Which does NOT include 7.000-7.300 Mhz . .
>
>Also, do you think that those who are interested in bringing modern

>suppressed?
>
Of course not. I'm out here applauding the work being done in the
field of HF narrowband digital modes. This work is gonna lead to
something very big one of these days. Note that for the most part
those contributers are not playing the lame old "catch up with the
commercials" game ss proponents are playing.
>

We're 100% agreed here. There's plenty of absolutely dead VHF/UHF ham
spectrum space, use it or lose it, go for it. Or make it happen or
quit babbling about it.
>
>and I'm disappointed that we
>haven't made more progress along those lines.
>
The question is "Why hasn't more progress been made?". I suspect the
answer lies in the realities of Marketing 101. "I already have a 56.6

kbs connection", etc. My own bottom line is that if ss stays above 30 Mhz where it belongs I have no problem with or particular interest in ss.
>
>I don't perceive one iota

Those guys weren't "forward looking", they implemented a
commercialized technology - which is exactly what this ss thrash is
all about.
>
AT&T commercialized tranoceanic ssb years before it first showed up on
the ham bands in 1934. In the case of ssb the mode was and is
compatible with the existing HF modes and existing regulations .
Spread spectrum is neither which is one big difference.

Ed, I have never considered you a smartass, but I do believe you're
about to get there. Most of my information on the subject has been
gleaned not from my qso's but from listening to that of others.
You really are ignoring reality, and I'm far from the only other ham to
know it.

Except that: Dick has seen firsthand, during a thirty year career, how the public need for frequencies outweighs any "hobby" need, more especially when those frequencies go virtually unused. His attitudes on this subject are far from new.

Factually, if there was any activity in the region I would have most likely joined in, even at the microwave frequencies. I just don't like talking to myself. Why do you think I bought a 440 rig in the first place? Once for a while there acutually was a 440 machine in range, but its infrequent use led to its abandonment. I doubt it would shake all that many if much of out UHF/SHF spectrum was taken. I still have a dualband HT, and take it along with I travel. The lack of use on those allocations is good reason for their withdrawal.

So you Great Leaders at Newington carry on. I believe we're finally beginning to see where you really are coming from.
(We know, you're posting here "personally")

Hell no, man, a Real Hamï¿½ is one who has a piece of paper in his pocket
and is smart enough to find an AC plug for the "radio" and, maybe, to
plug a PL259 into it. Just don't ask him to solder on the PL259.

> "The FCC was established by the Communications
>Act of 1934 as an independent United States government
>agency directly responsible to Congress."

Your first and second statements are at odds, and implies
confusion. The second statement in itself again is somewhat
at odds: being "independent" and "responsible to" doesn't
actually mesh. Then again, such sentence construction doesn't
surprise me when it comes to politics.

And that's what you're back to: politics. Thus, returning to
our original subject, a Commission-to-Amateur Radio
relationship doesn't exist in a vacuum. FCC has to
interact with the President, the Congress, and legislative
branches. When the Commission is advised to bring a certain
administration policy to completion, it's the Commission's
job to do it seamlessly the way it sees fit. But they won't
arrive at a seamless solution for Joe Ham, because the
Commission's business IS business, and not one whit having
to do with education per se. Thus no surprise when it comes
to their recent R&O. Given the politics, it's simply beyond their
capability to write effectively without being caught in a logic
hole. That's why politics, and politicians, are far worse than
any disease, because they go on forever.

Yes, although Ed has been pretty clear that he wants to ensure that existing users will have protection. Me, I'm from Missouri on this one: I want to see specific proposals and clear analyses of the effect of proposed operations on narrowband users before I support the concept, although I'm not willing to reject the idea of HF SS out-of-hand. So far, no such analyses have been forthcoming. Nor have any specific proposals other than carte blanche.

Mine too. And I'm glad to see that you understand that it's not my, Ed's or ARRL's agenda. Now if you could explain that to Dick, because I've had no luck doing so.

> I'm having a very difficult time believing that a mode which scatters

I think it may be possible to implement limited FHSS on HF without unduly affecting narrowband users, although I suspect the necessary limitations will reduce the utility of HF SS. Again, I'll await a specific proposal before making any final commitment.

> >I agree that most hams aren't chomping at the bit to see SS implemented.

Exactly.

Details, details, the devil's in the details.

> Note that for the most part
> those contributers are not playing the lame old "catch up with the

The ways in which I would like to see hams using SS have little to do
with what's happening commercially.

I don't think it has even gotten to that stage. There is as yet no
amateur SS implementation against which to compare your 56-k connection.
When there is, I hope it's more than just a means of implementing a
high-speed connection.

Jon

In other words, decisions that Congress doesn't feel like overturning. Ultimately, Congress has the power, and the FCC knows it.

> > "The FCC was established by the Communications

That's only because you fail to put the sentence in context. "Independent" means "independent of the executive branch." With that in mind, the sentence makes perfect sense.

> And that's what you're back to: politics. Thus, returning to
> our original subject, a Commission-to-Amateur Radio

Their business is the public interest. Clearly, they view promotion of business as part of that public interest, largely because Congress told them to. I'm not always comfortable with the degree to which business interests are promoted by the FCC, but while they are promoting them there is nothing secretive about it.

Clerks at service meat counters in supermarkets sell hams but
they don't have to be one.

Dave, you make truly stupid analogies...sort of like your stated
CW order-wire for RTTY which you say (now) was some kind of
"State Department procedure." :-)

No one has to be accountable to your judgement, certainly not
all the newcomers to US amateur radio who chose non-code-test
licenses over code-tested ones by a large margin. That will
continue if past is prologue...and it does indeed look like that.

Homophobia?

I don't believe that I, or anyone else that frequents this newsgroup have "fear" of queers. I, for one, don't happen to believe that homos are discriminated against. Yeah, that's right, NOT discriminated against. You can hold a job, you can do what you like in private, you have freedom of speech--all the rights of any other American. What the "gays" ARE doing is trying to push a filthy, perverted, Godless, and WRONG lifestyle onto the public. But again you have the right to believe what you want, and I have the same right. One of the things that let this particular "cat" out of the bag was the trend in society to blame somebody else for their own actions--relegating responsibility to "others", or some "factor" in their past. The thing here that is missing is personal R-E-S-P-O-N-S-I-B-I-L-I-T-Y. Regardless of one's so-called "orientation", one can CHOOSE how one will act in and towards the public. The simple fact is, normal people, that is, Heterosexual people (the way GOD intended) will NEVER accept sodomy. It is not so much the fact that homos have been around forever, but the fact that they try to ram it down our throats where our gut reaction is similar to coming across a rotted corpse in the woods. It is a NATURAL reaction and will not be changed.

The thing that separates so-called homosexual discrimination, or homo-phobia, as you put it, from racial, female, or age discrimination is that people subject to that kind of discrimination can't CHOOSE their race, or gender, or age. These things are natural, homosexuality is not. Homosexuals may, or may not, "choose" their orientation, BUT they CAN choose whether to engage in sodomy, or whether to try to ram it in the public's face. As to the Boy Scout issue, they are a private organization, and private organizations still have the right to freedom of association--as do individuals. A heterosexual has to wonder WHY it was so important for gays to have access to BSA--especially as it pertains to Scoutmasters. Sorry, we can't help but wonder if it was the temptation of those tender young "sweet" virgin boys that made such access so important. Again, the issue is, not one's orientation, but the attempt to force it upon others. OK, so you're gay. Fine. Just keep it to yourself. People will likely "know" you are gay anyhow. But you are less likely to have trouble if you keep it to yourself. That's ALL. I would not harm a "gay" person just because he is that way--only if he attempts to make a "move" on me might I knock hell out of him.

The Bible says this is wrong. As with everything else, each person can choose to believe this Book or not. But for a quite convincing dis-course against it, read the book of Romans, Chapter 1, starting about

verse 18. After reading that, I cannot help that the "diet" related
to homosexuality IS related--you know, the one that guarantees to make
one slim. Trouble is, you just don't survive it.

Not at all. Congress only gets into thinking about getting
involved when they rule that FCC acted improperly on one issue or
another, as they did re: the 220 MHz band.

>> Your first and second statements are at odds, and implies

It's not a matter of putting the sentence in context; it's a
matter of the difficulties of expressing the written word in
English, often combined with bureaucratic legalese.

If he can't integrate new modes into ham radio without negatively
impacting other's use of other modes it simply ain't gonna happen. The
FCC won't let it happen. The only old mode which has completely
disappered is spark and that fell into disuse as a result of the much
more effective cw technology. Ditto (most) HF AM when ssb became the
standard. Neither of those modes posed operational problems for users
of other modes or required rules changes. That's how ham radio works.
His lack of understanding of the fundamentals of what makes ham radio
tick is appalling. Never mind a Tech would "re-invent" HF ham radio by
fiat given the opportunity.

So they will do what they want, but 20 years after deciding to eliminate the amateur service they have yet to get it eliminated? That makes no sense at all.

> standard. Neither of those modes posed operational problems for users
> of other modes or required rules changes.

That's true in the AM case but was not true in the case of spark. There *was* a rule change that made it illegal to use spark. It was necessary because spark was incompatible with CW modes (for reasons similar to our concerns about SS, actually) and because although the vast majority of hams eagerly adopted CW, it would take only a few diehard spark operators to cause real problems.

> They're suitable up the spectrum, whether they attract a following is
> a question. They're entirely unsuitable for use on the HF bands which

But do all those who think there may be a place for HF SS have the intention of ridding the world of CW? Unless you agree with that, you and Dick are not coming from the same place at all.

Jon

If anyone ever says that a handful of hams memorize without understanding, I will agree that a handful of hams memorized without understanding.

I believe that most hams pass their tests the same way that I did, with a combination of learning, memorizing, lucky guessing and just plain skipping a topic or two, hoping there won't be a lot of questions about it on the test. That seems a lot more obvious to me than the alternative theories based on extremes. I guess we are each seeing the world through our own experiences. Can I offer you some help understanding some of the theory?

I have not heard that the bands have gotten worse, Vince. I have heard a few more "interim" calls than before, and a few more questions from newcomers, but the stepped up enforcment has actually improved the bands. A few months ago, I tuned up to 14.313 and heard a maritime net. There is still a lot of work to do, but the work will be in the area of FCC enforcement, not testing.

IMHO, it is a false hope to expect that the problems facing Amateur Radio will go away if only we could find exactly the right tests for incoming hams.

I fail to see a substantial difference between "an administrative division"
and "a facility supplying some public demand". The ARS is an administrative
division which supplies some public demand. Like I said, the service is
actually a service being performed for the citizens by the FCC.

Hi Folks,

it seems the "Good Ol' Boy Group" AKA... The ARRL world never changes....

The history:

I was interested in becoming a OO, and I figured with my experience with Amateur Radio. I could offer my assistance.

This is the REAL deal... I was reading the paperwork in becoming a OO. and It seems, Me, a Licensed Amateur Radio Operator for 12 years, cannot be an OO for one stupid reason..... I haven't been a ARRL Member for at least 4 YEARS!

MY QUESTION TO THE ARRL BOARD...

WHY THE HECK SHOULD I BE A MEMBER OF A CLUB OR ORGANZATION TO BE A OO?????

I MEAN, WHY SHOULD I GREASE YOU PALMS WITH MY HARD EARNED CASH, JUST TO PROVE I'M ABLE TO BE A OO?????!?!?!?!?

WHEN IN ALL TRUTH, THE DAMN ARRL DOSEN'T GIVE A DAMN ABOUT IT'S MEMBERS, GEORGE RACE PROVED THAT WHEN HE TOLD ME AT A APPEARANCE HE MADE HERE IN DETROIT AND SAID THE FCC WAS GOING TO DO WHAT THEY WANTED, (ABOUT THE LICENSING CHANGES...) NOT MATTER WHAT THE PEOPLE WANTED AND THE ARRL DIDN'T DO ANYTHING ABOUT THIS....

BOTTOM LINE???

THE ARRL IS MORE INTERESTED IN THE BOTTOM LINE: MONEY!!!!

WE DON'T WANT YOUR HELP, UNLESS YOU ARE PAYING US MONEY!

SIGNED,

A SOON TO BE FORMER ARRL MEMBER!

From http://www.arrl.org/FandES/field/org/oo.html:

2.Must be an ARRL Full Member and have been a licensee of Technician
Class or higher for at least four years.

The four-year requirement applies to being licensed, not to ARRL
membership. You need only be a current ARRL member, which is true for
any ARRL field organization appointment.

> MY QUESTION TO THE ARRL BOARD...

...should probably be addressed to the Board.

> WHY THE HECK SHOULD I BE A MEMBER OF A CLUB OR ORGANZATION TO BE A
> OO?????

Nothing prevents anyone from notifying (politely, one hopes) a ham of a
problem in his or her station operation. You just can't do so under the
auspices of an ARRL appointment unless you are a member and have been
appointed. That doesn't seem unreasonable to me. If you are still
interested, your SM is the place to start.

If anyone can be accused of employing imaginative fantasies in these discussions Vince, it is you. The FCC denied the petition, essentially telling the petitioners to take a hike. Doing so does not constitute telling the Amateur Radio Service to take a hike. That allegation is ludicrous.

You'd like to believe that Jim, but history is against you.
We've known what's been coming down for 20 years. Many said
"bull" to comments regarding easing of code AND theory
requirements, until FCC pulled the plug a year ago. What's
happening now is fully consistent with what we said was
coming.

Before, you said that you administered them, then you said you read
through the pools, and now in the third round you're claiming to take
the exams more often than anyone around. Well, I don't know what to
believe, but what I do know is that the material on the exams is NOT
trivial, and it takes a goodly amount of study in order to be familiar
enough with it to pass the exams.

> No, I was a 14 year old high school freshman.

Okay, so you didn't have a technical background either. Just like the
folks you criticized above. That's hypocritical, Dick.

> > I'm also congnizent of the fact that this knowlege represents only the most

Please elucidate these differences in greater detail. Give yourself as
an example of the 'good kind of Extra' if you like. And then contrast
that with say, me for example. One of the kind who didn't have to meet
the "experience requirement" you evidently did.

> No question that is probably the most important factor. With it one

> don't get much detailed information in the pools.

What kind of detailed information that's missing from the pools, should
be included in the pools? Since you're on top of this, it should be
simple for you to provide.
And, it would go a long way toward proving your point.

> > Since there were no cheet sheets brought into the exam, you can be confident

> summed up to it. All confirmed by the considerably lowered knowledge
> level demonstrated by so many new licensees.

It's an interesting point. Sure wish I could go back in time and see
how incredibly informed young Dick was as a 14 year old amateur radio
operator by comparison to todays new hams. From hearing you tell it,
you must have been a veritable electronics genious by comparison.

> These
> > facts are deemed to be those which are the most relevant to amateur radio

> I imagine you're tired of hearing about it. Don't blame you, I'm tired
> of saying it, especially when I get accused of spreading falsehoods.

A more constructive change in tune would be welcome. If you're right,
then you should be able to recommend the specific necessary changes. If
you can't, well, it would seem more likely that you just like to hear
yourself complain about things.

> > Past tense. I think there are now roughly 1000 questions in the pool. Since

> So, no whistleblowers allowed?

That's a non-sequitur.

> I did offer to Ed to use one of his new defective Handbooks to form
> some questions on new material, but he ignored me. I wasn't surprised.

You don't need Ed's permission to do anything, Dick. So that's not a
valid excuse.

> But I don't own a new handbook, though I started to buy one at a hamfest
> a month ago. But every copy each vendor had was shrinkwrapped in

> "bent cover" issues out to vendors to use as samples if they have so
> much handling damage they have to shrinkwrap every copy. The new
> handbook must not be a very big seller.

So the reason you can't tell us about all the important technical
knowlege that should be on the exams but currently isn't; which results
in the hams of today not knowing as much as you were required to know
when you were first licensed, is contained in one book. And being that
you encountered some difficulty in purchasing this one book, you either
don't know what the material is, or cannot provide it for some other
reason.

Hmmm, sounds reasonable. Excuses being what they are.

Guess instead you could write 1000 or so of your own questions, based on
your own personal expertise on the subject of course, and then just have
somebody throw out the ones that are already in the pool.

> > Question for you: how did you first learn the resistor color code? Was it;
> > bad boys rape our young girls but violet gives willingly?

> That wasn't the way I first learned it as a ham, but it's how they
> taught it in military electronics school.

So when you first learned it, as a ham, you derived it from first
principles?
Or did you employ a word association method?

Okay folks,

here's the deal...

I made a bit of a boo boo and was sort of misinformed.

It turns out, you don't have to be a league member for 4 years, to be an OO. You just have to be a league member and at least a tech class License holder for at least 4 years to be a OO.

So....

I made a mistake. sorry to all offended by my posting... Thanks to Don N8NJE for calling me on the telephone to clear up the misunderstanding.

I'll bet the bastards
an ARRL member too. Probably got in on the League discount membership plan.
All this started me wondering, What make a ham a ham? Is a ham someone
that's working to improve their knowledge of radio theory, electronics and
operating skills?

Well guess what guy? All of us ham have different drives. Some of you might
obsess with code practice and technical details but surprisingly there are those
of us who just enjoy the friendly banter with folks just like us from around the
world. You did recall that part of being a ham was being able to do that right?
Yes, we do good work in times of disaster and we try to be upstanding citizens but
the bottom line is we are human with human needs. Relax my friend and enjoy the
hobby your way and others will enjoy it their way. A little tolerance goes a long
way.

And the facts are that despite your attempts to normalize your perversions, you are still a sodomite promoting unnatural sexual practices. You never will be able to have kids of your own making but rather promote adoption of children. One has to wonder why the selfish perverts want to adopt children, because perhaps they can recruit more fawning fags into their movement. Keep your perversions to yourself and your filthy friends. Sicko.

Well, Leonard H. Anderson, I think the analogy is a good one. It beats tipping scales which really aren't tipping by a mile. My story of the State Dept. CW order wire (which I never ever said I instituted) was not an analogy but a statement of fact in response to your guff about government no longer using CW (but you already knew that).

Everything in the present will be in the past in a second or so.

You've dodged the questions again. The licensing procedure has now been made much easier. Are you waiting for the modernization which you spoke of (apparently the recent modernization did not suit you) in order to deign amateur radio with your presence? Do you actually intend to obtain a license or are you a perpetual procrastinator? Do you have any real interest in amateur radio or does this newsgroup posting fetish of yours represent a means for you to pass the idle hours?

Yes it just shows that Bruce W is supporting and promoting his homosexual lifestyle on others. Perhaps he is also promoting his lifestyle to young men and very impressionable kids. Its not natural to be queer but rather it is a lifestyle choice. There is no gay gene even though the homosexual lobby desperately grasps for legitimacy.
That is why they have to get the politicians on their side so they can give homos special treatment

It is not.

> how is it going to be provided without "an administrative division"? The
> different radio services are certainly divided into "adminstrative divisions".

A "bus service" facility consists of the whole of the activities of the
bus line (busses, mechanics, drivers, etc) not just the administration
of it.

The "Amateur Radio Service" facility consists of the whole of the
activities of the amateurs that comprise it, not just the FCC
administration of it.

Considering you threw this blaring rant out without investigating the
"REAL deal", (see Jon's post response above) I doubt that you are a viable
candidate to be an OO anyway.

An OO is a person who, technical qualifications notwithstanding, must be
able to demonstrate significant restraint and tact. Your use of the CAPS key
to holler at us and make a fool of yourself is sufficient evidence that you
don't have those traits.

Are you saying that your 1963 Novice exam and today's Technician exam
are equivalent in technical material? No? Then memorization must
balance the scale to allow you to pass either in a day...

If you say that *anybody* can pass the test without understanding the
material, how then can you deny that it is a bad test? A good test
would only allow people to pass who understand the material...

>I believe that most hams pass their tests the same way that I did...

But of course most people are not engineers. I believe that most
people do things the easiest way. For a layman the easiest way to go
is to memorize the questions and answers. The only other way to go is
to do months of study...

>That seems a lot more obvious to me than the alternative theories
>based on extremes.

There are no extremes in what I'm saying about the ham tests. It's a
simple truth. They can be passed without knowing the material...

>I guess we are each seeing the world through our own experiences.

Welcome back to the marble game... :-)

Steve Robeson <k4yz@aol.com> wrote:

> >A SOON TO BE FORMER ARRL MEMBER!

> You know where to not let the door hit, don't you?

Actually, he does not need to know where to have the door hit him. Speaking as an ARRL HQ employee, I want to point out that his being displeased with something about ARRL does not mean that the ARRL will be better off without him. To the contrary, those who see things about ARRL that should be improved can be among its most valuable members, because those are the people whose ideas can improve the organization. If someone disagrees very strongly with one issue, I can understand why they might choose to leave, but in doing so, ARRL will not slam the door behind them. There are usually a lot more things to consider than one issue, and I usually consider a few of them myself after each ARRL Board meeting.

In this case, Chuck had made the very minor mistake of misreading a requirement. Jon Bloom corrected the info, and I see where Chuck acknowledged that correction in another post. I don't think that any of that is reason to hit him in his backside with a door.

I agree with Jon and you that those who want to operate within the ARRL's Field Organization need to be ARRL members. After all, the League spends the members' money when it funds those activities. People who volunteer as OOs are not doing more of a service for Amateur Radio than they are for the ARRL, a job that is very much appreciated by most members and non-members alike. The administrative support for an individual OO is not apt to be a fortune, but some cases that the OOs become involved in cost quite a bit of your money to resolve. The fact that ARRL has to consider how it will fund the things it sets out to do should be important to us all. I can tell you exactly what the bottom line is, it is $0.00. In the long run, revenue and expenditures are exactly balanced. This year, it is actually a bit less; the League is funding some new initiatives that it believes are important to the long-term health of Amateur Radio and to the long-term goal of continuing to keep dues increases at a level below inflation.

At any rate, Chuck, I am glad that you were able to work things out. For future reference, you can address ARRL policy matters directly with your ARRL Division Director. See http://www.arrl.org/divisions. As an aside, for those who may not know, the bottom line for the ARRL Directors, Vice Directors, President, Vice Presidents and Treasurer are exactly zero every year. Those that set ARRL policy are, by its bylaws, not permitted to have any financial interest in Amateur Radio. That's why I can't run for Director. :-)

> > that hams should (not must) learn modern radio technology.

> Thats what you think you said, but youi forgot that you incoirporated
> the output of two FCC officials on the same subject, and that was
> included with your opinion.

Yes, I did include the comments of two FCC staffers one one or two occasions when I stated my opinion. I felt that doing so better explained some of the reasons I hold my opinion. I guess I didn't expect that anyone would feel that the words of another would change the meaning of my words.

> You already know, if you want to recognize it, my beliefs on hte subjects
of what hams should know.

I think that you and I are not nearly as far apart on that as you might think. If you are able to let go of your belief that I am adovocating that hams must stop what they are doing in ham radio and must take up new technologies instead, would you agree with my premise that it is important that Amateur Radio, as a whole, continue to learn about modern communications technologies in use in many other radio Services?

> Which makes the validity and quality of the tests even more imppotant.

I agree, Dick; I believe that improvements can and should be made in the tests. I don't believe that the method used to test hams is so flawed, though, that such improvements cannot be made.

> It does no good to have all these high flown beliefs if the
> implementation of testing is inadequately poor. I believe it is. You say
> you don't. The knowledge level of the "average ham", or lack of it, is
> the proof.

I don't see that the knowledge level of today's average ham is significantly different than it was when I was a General in 1963, at least not the knowledge that I used to pass that test. ALL I studied for the General was the ARRL study guide -- 16 pages of operating, rules and technical material. What IS different is the RELATIVE knowledge level of the hams of today wrt the significant changes in technology that have taken place since 1963. And that difference is not due to the fact that we now require hams to study over 1200 questions that take up over 100 pages to print instead of asking them to study 16 pages of material. The difference is there because technology has changed and it may no longer be likely that any one ham will know it all. But I bet the average ham of today knows more about RFI than I knew as a General. He or she knows more about digital electronics than I knew as a General. The number of Web pages on technical topics are legion; the ARRL Technical Information Service pages get tens of thousands of hits. These things don't happen because hams don't want to learn things.

All of the available evidence I have tells me that ham radio is not lacking in technical learning. I see only a handful of people who say they memorized the tests without learning, and, frankly, I think it likely that they learned more than they think they did. When I compare that handful to the people who I see who read web pages and articles and who are generally interested in learning things, I just can't let my opinion about what "vast hordes" of people must be doing be made from that handful.

I think, Dick, that the biggest difference between us is that I still believe in the present, and the future, of ham radio and want to take positive steps to make it happen the way I see it.

Are you now operating on Amateur frequencies using all of the provisions and rules of the personal radio services or are you using amateur power levels, amateur modes, amateur frequencies, amateur rules and amateur call signs?

If the former, I expect that you will, sooner or later, get to find out just what the FCC intends to accomplish within the Amateur Radio Service.

Cecil:

Let's just say that I recognize people who are trying to be annoying,
but my own tolerance for annoyance is unusually high. Therefore,
I can recognize you as being annoying, without actually feeling the
annoyance and experiencing the physical and emotional symptoms
of the annoyance. So, go ahead, and be just as annoying as you
care to be. Don't change a hair for me, not if you care for me!

Ed:

Keep in mind, I was assuming a QRP-level CW signal in the presence of QRO-level SSB signals. When power levels are equalized, then CW signals will predominate. However, my experience has been that multiple high-power SSB signals will tend to overwhelm weak CW signals under most circumstances.

>The 23 dB might be a bit optimistic, though, unless the CW receiver really is

>have a decent "mental" filter that can gain back some of what a measurement
>would say isn't there.

My mental CW filter is responsible for my completing many CW QSO's under very adverse conditions, but those conditions involved atmospheric noise and other QRN, not the deliberate QRM of multiple, closely-spaced SSB signals.

Aaron:

I think you just wasted your time. I don't think anyone expects
particularly "high brow" posts from ARRL HQ employees! At
least, that's not been my experience! Admittedly, Ed does better
than most at holding his fingertips, but Jon's posts are right in
line with what I've come to expect. Too bad we can't get K1ZZ
to post here -- it would be fun to be riduculed in public by
the Executive V.P. of the ARRL -- just like I was in private
correspondence from him! Of course, the worst abuse I took
was from a former ARRL HQ employee who is now a silent
key, so I don't think it would be right to give the details in the
NG. However, if anyone's interested, E-mail me and I'll fill you
in -- naming names and all!

>
>Jon

I hereby propose a capitalization test be given to any individual
wishing to have the privilege of posting to this newsgripe. I also
believe that in order to incentivize proper capitalization, that these
tests be given in at least three levels of difficulty, with the
incentive being a higher limit of messages that can be posted
per day for each successive level. I believe that capitalization
is a uniquely practical, effective, efficient, and universal method
of inferring the relative importance of a word, in addition to the
required use with proper nouns, words that begin a sentence,
and acronyms. Obviously, anyone who doesn't use capitals
correctly is a knuckle-dragging, slack-jawed, drooling, toothless
client of the welfare state.

BTW -- anyone who doesn't believe in the use of capitalization
can leave now...but don't let the door hit you in the ass on the
way out!

Ed:

Of course it's fun -- but the fun part doesn't commence until the determination to put forth the effort to master the skill of Morse code is made, along with a committment to stick with it. The problem is, most people don't get past their fear of failure or their antipathy once they see for themselves that it *does* require a dedicated effort on their part.

It isn't intended to encourage or discourage anyone, Ed. I'm simply stating the truth about the reality of learning to use the code. What part of this reality is untrue?

>>Restructuring will,
>>indeed, cause a decline in the total numbers of CW operators -- and

>Our ambassador of "can't do."

The "can't do" part is largely because a great many people who failed at meeting the previous code requirements simply decided that they "wouldn't do" since it was easier to whine and complain until the requirement was finally reduced/eliminated. Again, I ask -- where have I lied?

Typical homosexual/Lambda response. Anybody that says anything about homosexuals that does not support there choice in life is automatically a "homophobe". Does that then make every homosexual a "heterophobe"? Homosexuals try to take every opportunity to shove their choice on everyone else with the purpose of trying to get everyone to accept the choice as natural. It's not. And the discussion of it does not belong here. You're right Bruce, this is not my choice, but it is the decision of the folks that started the newsgroup and I can find nothing that says this newsgroup is for the discussion of anything but amateur radio, not people's political beliefs or their sexual preferences or choices.

Furthermore, you criticize me for making proclamations, then you make a proclamation "it has been long claimed by members of both news groups that hams are political....yada, yada, yada. Well it has been long claimed by these same hams that discussions on homosexuality and other sexual choices do not belong here.

Taking your absurd position, any topic should be discussed in the ham newsgroup. Because hams have pets, we should discuss pets. Because hams drives cars, we should discuss cars here. Keep the homosexual discussions in homosexual newsgroups where it belongs. Keep the radio discussions here.

Stop thinking in such limited terms. These contributions, that you seem to find so necessary, does not have to be limited to just ham radio. My interest in ham radio came from my interests outside of ham radio, and much of my experience gained through ham radio is used outside this service.

However, having said that, I will go back to what I said once before - no person has ever been judged worthy, or not worthy, of being a ham based on his or her ability to produce "alternative technologies." If that is the primary requirement, than I dare say that 99 percent of current hams would have to turn in their license (including me and most likely you).

Furthermore, you're not trying to rush things, are you? It took ham radio almost 90 years to produce the "alternative technologies" it has been credited with so far. The no-code hams have had less than 10 years, and you're already ready to throw them out because they haven't produced to the level you desire.

> You run EME with packet or what?

The last time I messed with EME (at a friend's station in Italy), it was limited to SSB voice. I don't have EME capabilities at the moment (no place to put the antennas), but when I do it will be SSB voice.

> Tune 14.000-14.050 Mhz this coming

I have never said a thing about the "death" of HF or CW. Emphasis on one part of the radio spectrum does not mean the "death" of another.

I can't criticise him too much for that - I've done it myself (though not for two years). When you move 7 times in a three year period, it gets to be a real pain to constantly file change of address data with the FCC. After that, I've become almost an "expert" on the FCC's online system.

Not only that, the tests are taken one at a time. That means a third of the pool is studied for each. BIG difference

I guess I'm gonna have to go get a question and show in detail how they go about doing the word association bit, explain it in lurid detail for all the world to see, right here on rrap, before he gets the point. I didn't want to do that, but.....
It was years into my VE career before I realized how they do it. I say again, the less one knows about the subject matter, the easier it is to pair the question and its answer, since some knowledge of details will only confuse the memorization of the question and it's answer. When one reads the question with ONLY the correct answer, as pairs, (you discard all distractors before you ever begin) several times over, your memory naturally pairs them so that when you take the test, the answer you have repeatedly read in conjunction with that question literally leaps out at you. It is the only one of the choices given that you've seen before and it is easily recognized. The *less* you know about the subject, the easier it is!

No, it is a hobby that is also a service. The hobby part comes first, because without the people engaged in this hobby, there would be no service.

Of course, before you (or someone else) go crazy, I didn't say this is "just" a hobby. For more on this, see my comments in another current thread ("Pride").

Which means you don't know where Dick was coming from. When you consider the entire "modernize" movement, you see little support for CW and what there is is lukewarm at best. It is pretty clear that most of them would dump CW entirely if the opportunity presented. As it did to NCI when ARRL sat on its hands the last time round. I still wonder if the FCC isn't still pissed because of the lawsuit ARRL filed against it years ago. That caused me to drop my membership for a couple years. The reason they sued I don't remember, it was so trivial, but the whole scheme was ridiculous. What did they hope to gain by suing the FCC?

The BOD voted last month to "Not change its policy of supporting a CW qualification *at this time*", on a voice vote, then voted down a motion to poll the BOD for individual votes. Why? Rather simple. No one, member or not, can find out how any BOD member voted, either for or against the motion, thus no individual member can be held accountable by either side of the code test issue for his vote. Since the entire BOD is not voted on, only as individuals, they're ALL safe! That's straddling the fence if ever it happened!

He might be interesting save for the pontificating and the sour grapes attitude. You'd think that a guy who is interested enough in amateur radio to haunt a newsgroup for years would make some attempt to obtain a license of any class. If he did that he wouldn't be able to make statements about not being given entrance to the lodge hall.

Until he obtains a license from the FCC (the only agency to grant amateur radio licenses), he is an SWL.

So you want me to make full disclosure each and every time?
Yes, I - 1.) administered tests, 2.) took each new test as a practice
exam as new ones arrived to screen them for accuracy and also to see
what was on them. That means a took a lot of test, unofficially of
course since I had long held an Extra class. Clear now?

but what I do know is that the material on the exams is NOT
> trivial, and it takes a goodly amount of study in order to be familiar
> enough with it to pass the exams.

IF and only if one studies to learn the material, and not just to be
able to match a certain answser with it's matching question, which can
be done without learning the subject material, and often is done.

> > > I assume from your remarks that you had a technical background when you were

> Okay, so you didn't have a technical background either. Just like the
> folks you criticized above. That's hypocritical, Dick.

What is it with you guys anyway? Your understanding has evaporated.
NO, I had no technical background when I becaeme a Novice. And not a
whole lot more a few months later when I became a General, though I had
learned considerably. But 13 years later when I took all the tests for
Extra, I had been through five years of military electronics including a
6 month comprehensive course where were started at the beginning and
went through color Television, transmitters and microwave. Even spent a
couple weeks on solid state, back in the transition days when most gear
still used tubes.
And I had studied for, taken and passed the Second class radiotelepone,
first class radiotelephone operators licenses, plus the Ship Radar
endorsement.

So, Yes, I did have a technical background when I took the Extra exam.
Clear now?

Besudes that, damn it, how many times do I have to say it?

***IT IS NOT THE FAULT OF THE ASPPLICANTS THAT THEY CAN PASS THE TESTS
WITHOUT KNOWING ANYTHING ABOUT THE MATERIAL, RATHER IT IS THE FAULT OF
THE TESTING SYSTEM**

Simple enough. When someone with no technical knowledge can use the
question pools to pass the license tests through Extra class, while
learning nothing oif consequence about the technical material involved,
there is nothing
extra about the Extra class license.

> simple for you to provide.

You bet it is. You prpobably remember that Ed Hare posted four or five
questisons and answers from the new pools a week or so ago, questions
which were constructed such that associating a particular word pattern
set with the question without actually knowing the material, as is
normally done, would be very difficult, and it would indeed be much
easier to learn how to work the problem. THAT is the answer, to have
most of the questions constructed in that manner. Simply make it
impossible to do what has been done since 1985 by people who found it

easier to study testing techniques instead of the material.

It isn't a matter of sufficiency, rather of question construction as
noted above.

> > I imagine you're tired of hearing about it. Don't blame you, I'm tired

> You don't need Ed's permission to do anything, Dick. So that's not a
> valid excuse.

No excuse involved. I don't own a new copy of the Handbook, as noted
earlier, and thenew modes aren't coivered in my 96 edition. Ed offered
Aaron Jones a defective copy from the scrap bin if he would give his
mailing address, an obvious ploy to draw out the anonymous Jones. Of
course it was denied, and I decided to let Ed put his money where his

mouth was- I would use one of the damgaged Handbooks to make up 10 questions on the new material if he would send it to me. I really didn't expect him to do it, of course, but it was a chance for him to show how serious he was about promoting hams to construct new questions. But I don't worry about the new modes, what I want is for the tests to correctly evaluate the applicants learning level at test time. I don't believe that the tests should be hard, if the material already covered was tested accurately it would cover more than enough material. But as it is, you as an engineeer or whatever might make no better score than one who knows nothing whatever about electronics. That's what you want in a testing system?

> So the reason you can't tell us about all the important technical

> principles?
> Or did you employ a word association method?

BIG difference. When I word associated the color codes, it was for the purpose of relating them to something that I UNDERSTOOD. As done for the tests, with the question pools, the applicant does it merely to match two things accurately, neither of which he has any understanding.

Ed is wrong. People DO get ham radio licenses to "Not learn". Mostly they get them to talk on radios. And then they learn what they find they must learn as they go, if they can. Frequently that learning is embarassinly inadequate.

No case covers anywhere nearly all, of course. But the point is that far too many licensees have made it to Extra class with far too little knowledge. That has seriously degraded the license, and it shows. Ed evidently doesn't, but I hear about it all the time on the air, Extras who know virtually nothing technical.

No, that's not what Vince is saying at all. He's saying that you don't know Ohms law any more - nor does anyone else in amateur radio. Everyone forgot it 20 years ago. Or was it on April 15th last year. Anyway, remember when that happened? ;-)

So you believe it doesn't matter at all that many Extra class
licensees
became licensed on the question pools without learning anything
meaningful in the process - that doesn't damage ham radio? Somehow I
don't think your answer will surprise me.

I can even agree here, given the few questions you posted last week. If
most of the test questions were configured as those were, there'd be no
proble and my dissatisfaction with the tests would completely evaporate.

>
> I don't see that the knowledge level of today's average ham is significantly

The most glaring examples are Extras, I'm afraid. They are expected to
be at least modestly knowledgable, and far too many are not.

ALL I studied for the General was
> the ARRL study guide -- 16 pages of operating, rules and technical material.

We're not that far apart, although I believe I've seen things in the field,as a VE, and on the air, that you have missed. (I do work and listen to quite a lot of SSB on HF as well as CW). And the years as a VE was an eye opener.
I know that no one is expected to be schooled in electronics just to get a ham radio license, but it should be at least moderately difficult to get to the Extra class, if it is to mean anything more than lip service. Fifteen years of question pool exams have about trashed it. With the pool situation as it has been it isn't. I think that can be improved, not by adding material necessarily, but by rewriting many questions so as to make them more difficult to pair answers without learning, as noted earlier.

That was then, this is now. I'm talking about today's ham test. The
one with the exact questions and answers published and available for
memorization...

>It would take me more than months to memorize all of those questions without
>understanding. The most time consuming part would be avoiding the
>understanding.

It would take a layman a year or more of technical school to really
learn the electronics on the Extra test. He can memorize it in a
week...

Not to worry Dwight because it apparently does no good. I changed my address last September when I moved and it took because the FCC database was updated within a few weeks. However when I got official correspondence from the FCC a couple of days ago (about my password notification for CORES) it was, you guessed it, sent to my old address... :-)

Ed, It IS much easier to do when you know nothing about the subject
matter.
These are things I learned from the years as a VE. Rewriting questions
can fix that.

Oh now I get it. They "know enough to keep quiet" so as to keep from getting "nailed" because Congress has a "history" of wanting to "dumb down" amateur radio operators until they can no longer fix or even use their radios. And by then they'll be so stupid that the radio fairies can come right down and take away all the radios. And the FCC can finally sell the spectrum to Kenwood. And Vince can finish smoking the rope the FCC supplied.

The End.

So let it be written, so let it be done, thus spoke Biancomano.

I don't accept your premise.

> - that doesn't damage ham radio?

I want to see specific examples of the damage, Dick. What can you no longer do in ham radio due to the damage caused by recent licensees? Are these licensees keeping ham radio from fulfilling its public service role? Are they inhibiting interested people from learning radio technology and technique? In short, in what specific ways are these licensees diminishing ham radio? Mind you, I'm not looking for vague assertions that they don't know enough, I'm looking for specific information about what they are doing that is causing damage. If you can provide such specifics, it will help make your case. If you cannot, then your belief that ham radio is being damaged is mere speculation.

> Somehow I
> don't think your answer will surprise me.

Somehow, I don't think yours will surprise me, either. But I'd be delighted to be proven wrong about that.

> be done without learning the subject material, and often is done.

The answer contains the words which are the correct answer to the words
contained in the question. I wonder how somebody could know the words to
the question and the words to the answer, know that the two correspond to
each other, and not know anything about subject of the sentences. Doesn't
make a lot of sense, Dick. Certainly isn't worth losing any sleep over.

But that would be impossible for anyone to do nowadays, right? I'd like to
suggest that you were probably just as "stupid" then as you claim so many of
your applicants are today.

> So, Yes, I did have a technical background when I took the Extra exam.
> Clear now?

I had more than 25 years of electronics background when I took my Extra
exam.

> ***IT IS NOT THE FAULT OF THE ASPPLICANTS THAT THEY CAN PASS THE TESTS
> WITHOUT KNOWING ANYTHING ABOUT THE MATERIAL, RATHER IT IS THE FAULT OF
> THE TESTING SYSTEM**

Error. Error. Error. What proof do you have that the applicants don't know any of the material? I claim their CSCE is proof they know the material. If you don't, why the heck did you sign them?

> Simple enough. When someone with no technical knowledge can use the
> question pools to pass the license tests through Extra class, while
> learning nothing oif consequence about the technical material involved,
> there is nothing
> extra about the Extra class license.

What it really sounds like to me, is that you need that piece of paper to prove something about you. Well, that's fine. If it took a great deal of effort for you, then you can be proud of your accomplishment. What somebody else does has no affect on that. I've noticed that once I've accomplished something, and then years later I go back and look at my work, it doesn't seem as significant a task. It seems to me that you're judging the amount of work required for Extra now in kind of the same way. Now it would be easy for you, but when you first did it, it was quite an accomplishment. Ya oughta give the young fellers more of a break there, Dick.

> > What kind of detailed information that's missing from the pools, should

You mean it's easy as long as somebody else (like Ed) does it.

> > From hearing you tell it,
> > you must have been a veritable electronics genious by comparison.

> Would you be kind enough to let us know what you read that led you to
> form that opinion?

Like I said, I read your opinion that nobody learns anything anymore - not like you did when you were just starting. Your evidence was based on your observations of these folks. I claim that you would have probably sounded just as dumb back then. By the time you got your Extra, you were a trained electronics something or other. That's an advantage over guys who aren't. But no one is required to have that kind of background. I'd claim that a guy who gets his Extra without that has accomplished more.

> It isn't a matter of sufficiency, rather of question construction as

> No excuse involved.

You provided nothing but a list of excuses for why you couldn't write exam questions.

> I don't own a new copy of the Handbook, as noted
> earlier, and thenew modes aren't coivered in my 96 edition.

I thought you said the problem was with the way the questions were written. Why not just go through and edit the question pool? Too much work, maybe? Easier to just blast the QPC here on the newsgroup? I'm sure those guys have other things they could be doing as well, Dick. But please, leave the questions about the new modes to someone with more experience with that. ;-)

> But as
> it is, you as an engineeer or whatever might make no better score than
> one who knows nothing whatever about electronics. That's what you want
> in a testing system?

Hey, if I don't know more of the answers than somebody else, then I think that's the way it's supposed to work. As you've said, being an engineer doesn't necessarily make one an amateur radio operator. Passing the FCC exams does however.

> > So when you first learned it, as a ham, you derived it from first
> > principles?
> > Or did you employ a word association method?

> BIG difference. When I word associated the color codes, it was for the

What's there to understand about a color code? bad=black boys=brown, rape=red, our=orange.....

>As done for the
> tests, with the question pools, the applicant does it merely to match
> two things accurately, neither of which he has any understanding.

You mean like matching the words '20 meter amateur band limits' to '14.000 MHz - 14.350 MHz'?

> Ed is wrong. People DO get ham radio licenses to "Not learn". Mostly
> they get them to talk on radios.

You need an amateur radio license to talk on amateur radios. Isn't that what most hams do with theirs?

>And then they learn what they find
> they must learn as they go, if they can. Frequently that learning is
> embarassinly inadequate.

Who's they? Those guys who just got their license? Yes, we all know that you were an electronics genious when you first got your ticket, Dick.

> No case covers anywhere nearly all, of course. But the point is that
> far too many licensees have made it to Extra class with far too little

> knowledge. That has seriously degraded the license, and it shows. Ed
> evidently doesn't, but I hear about it all the time on the air, Extras
> who know virtually nothing technical.

I think you overstate things a bit. But I'll give you one thing. Chances are a guy who gets his Extra after 4 years (or 2, like I did), is not going to know as much amateur radio as a guy who gets it after 20 years of operating. On the other hand, what took him so long? ;-)

>I don't have EME capabilities at the moment (no place
>to put the antennas), but when I do it will be SSB voice.

Why not use a digital mode? With a slow data rate, FEC and some long-term integration and similar processing techniques, it should be possible to do 2X EME with modest stations.

>I have never said a thing about the "death" of HF or CW. Emphasis on one
>part of the radio spectrum does not mean the "death" of another.

Especially when there is nothing about the rules changes that takes away any personal emphasis any individual ham may have been placing on mode or spectrum.

I disagree. The qualifications of hams today are greater than they were when I
studied a 16-page study guide to get my General and all amateur privileges.

> Damn it, ham radio was never meant to be an all-inclusive passtime.

Why would you want to damn ham radio?

> It has always been for the technically ivolved.

At least those technically involved enough to learn/memorize/guess on a test
covered by a 16-page study guide.

>So now you advocate that all be as one, the LEAST qualified one. I don't
>think you could have made it more clear.

Jon did not say that, you did, so that makes it your opinion. I strongly
disagree.

> They sure do, and when they happen to be code haters anything they say
>is accepted as command, and the beliefs of OTs are cast aside.

Jon didn't say that either. You did, so it is your opinion. I strongly
disagree.

It is very difficult to discuss things with you when you make things up from
your own opinion and then take issue with others for saying them.

I think Jon got a bit confused when you disagreed with Carl's point of view by responding to what I had said. A natural error, considering you kept quoting me and disagreeing with Carl without actually naming him until later in the thread.

At least it is not as bad as others who disagree with themselves in response to my posts. :-)

Did you stack the deck to help make your point? The point will be diminished by those who note that you stacked the deck.

>However, my experience has been that
>multiple high-power SSB signals will tend to overwhelm weak CW
>signals under most circumstances.

It is my experience that multiple high-power SSB signal will tend to overwhelm other high-power SSB signals. I would say that 90% of the time, there is one SSB signal per 2500 Hz bandwidth. If there are "dozens," no one is communicating.

>My mental CW filter is responsible for my completing many CW QSO's
>under very adverse conditions, but those conditions involved atmospheric
>noise and other QRN, not the deliberate QRM of multiple, closely-spaced
>SSB signals.

I would imagine not. I have never been deliberately QRM'ed by multiple, closely-spaced SSB signals in the CW portion of the band. A few Canadian ops have caused my 5 W CW signal some grief on 40 M, but I expect that they heard me very weakly, so just assumed they would be weak to me, too.

On how many occasions have you been deliberately QRMed on your CW QSOs by multiple closely spaced SSB signals? What percentage of your CW QSOs have been subject to such QRM?

You've missed the point entirely. Conversing on 'amateur frequencies' within an 'amateur service' does not an Amateur Service make. Without a technical learning infrastructure (and we no longer have that), we no longer have Amateur Radio, as defined. That's what the petition for reconsideration is about. And FCC is still frozen in place with it, not knowing how to handle it.

I agree with Darryl on this, in fact my correspondance with the ARRL regarding E-QSL revealed they are looking into this method. What is needed is actually an organization rather than individual. Historically, individuals will eventually quit or pass-on thus leaving the system "dead-in-the-water".

On the topic of actual "wall paper" nothing should prevent the use of these cards. In fact, if modeled after the currency systems of the world paper QSLs equate to paper money and E-QSLs equate to wire transfers. I like to collect paper QSLs but right now I have several countries on E-QSL that are worthless toward DXCC (the initial 100) that are badly nedded. In fact, one overseas ham was not aware of the ARRL stand and had actually sent me an E-QSL plus one through the slow and antiquated QSL Bureau System. (On that topic I have at least 3 envelopes on file - one for each postage change but nothing comes out. In fact the Bureau assistant manager for my call group will not respond to email inquires.)

The cavet for the organization accepting this responsibility is they cannot require membership to access. They could charge a fee for registration maintenance to recover costs.

Sure you do. Several times you've given a dictionary definition chosen from one of several meanings. Several times you've chosen the wrong definition to suit the situation. I say that you HAVE chosen definitions which suit your purpose and ignore definitions which do not.

I understand the definition to be applied to the situation, Cecil.
Learning morse is not "compulsory" or "forced". Either you are unable to
properly use a dictionary or you are trolling. There can be no other
explanation.

> > My state requires a motorcycle endorsement in order to ride a motorcyle.

> not with me.

I have no argument with the dictionary definition. I am not forced to
obtain a motorcycle endorsement. It is my choice to obtain one. Riding
a motorcycle is no more mandatory than obtaining an amateur radio
license. No force is involved.

"Once one decides" is a really important clause, Bill. It certainly
implies choice. Obtaining a ham ticket is not mandatory. If one
decides for himself to obtain one, he meets the requirements for
obtaining it.

I know what your side believes and you know that I do not agree with
your premise, IMNSHO. Now what do we do about that darned "forced"
written test? Think we should take out all of those pesky technical
questions? After all, if we simply know the regs and a few safety
rules, we can always send our equipment back for factory service.

> >My state requires a motorcycle endorsement in order to ride a motorcyle.

...and it would be a state's "job" in ensure that motor vehicle regs for licensing are justifiable. I'm still not forced to obtain an amateur license or a motorcycle endorsement. I'm not willing to assist you in creating a new class of victim.

It is my observation that things which are deregulated or less regulated seldom work as well as they did under regulation.

>From: Gary Danaher

>I vote for
>sending all those crappy import radios to a smelter in Pennylvania.
>

Amen!

I recently reinstalled my 10 meter rig in the car and I have been monitoring 28.085 (AM mode) while driving around. It is astounding to hear how many truckers are using this as a "company" channel.

I hear RTTY and voice announcements being made, but it appears that the truck drivers are chatting while going down the road within one mile of each other. Therefore, it is difficult to jam them or to get their attention. They probably have their radios at full squelch.

The latest QST addresses this issue in a 2-page article. If hams are interested in defending 10 meters against intruders (and want to do it "by the book" as the ARRL recommends), it will take a lot of stations monitoring to document illegal activity and help locate it.

A couple of years ago, I nearly had two of the truckers in sight. They were coming toward me and the signals were getting quite strong. They stopped transmitting just before reaching my location. I was going to get the names of the company and write the president. (This has worked occasionally in the past. Typically, the company president confers with his legal department and then sends the supervisors into the yards to check for FCC Type Approval on the radios).

Now, a question.....do we need a central clearing house for information so it can be tabulated by computer to look for patterns?

Dave, don't blame Cecil because he can't stay on subject and in
context.

Yes, it is if one wants to operate legally on the HF ham frequencies.
From Webster's: "forced - enforced or compulsory - required by
circumstances" The FCC enforces the Morse code requirement for HF hams.

> I have no argument with the dictionary definition.

Of course you do, Dave. That's the only argument you have.

That's a straw man argument because no one said a ham ticket is
mandatory. Morse code *is* mandatory for an HF ham ticket. It is
"required by circumstances" which is the definition of "forced".

> Now what do we do about that darned "forced" written test?

Nothing. Some forced tests are reasonable, e.g. a driver's test.

If he wants an HF ham license, he is forced to learn Morse code. From
Webster's: "forced - required by circumstances".

So you assert the Webster's dictionary definition of "forced - required by circumstances", is incorrect. Take it up with the publishers. I, for one, will continue to honor the conventions of the English language. To do otherwise is to try to confound the language for ulterior purposes.

The *fact* remains - in order to gain legal access to the HF ham bands, one is forced to learn Morse code, if one doesn't already know it.

Of course, Dave, that's what people do. Does a computer bus have wheels?
Of course not. When I choose the word "bus" for something inside a
computer, do you object to that usage because it doesn't have wheels?
Who died and made you the great white father of definitions? When I
use the word "forced", I am using it correctly and in context. I chose
the usage of the word. Trying to dictate the contextual definition of
another person's statement is just the despicable act of a bully.

The fact remains: In order to gain legal access to the HF ham bands,
one is forced (required by circumstances) to learn Morse code, if one
doesn't already know it.

One of the ways to combat this is to find out who the driver works for. If it is an independent driver there isn't much you can do, but if it is a UPS or other company driver a prompt letter to the company headquarters about the use of their equipment in the commission in a federal crime will certainly get their attention. Make sure you send a copy to Hollingsworth.

Oy vey, what bullsnot! You are definitely on the right track concerning e-QSLs but all this damn bureaucratic rigamarole red tape nonsense over them is preposterous.

You work a guy and he sends a plain and simple e-mail conformation. "This is to acknowledge my SSB contact with WX56Fink on 14.279 at 0046 UTC, Feb.20,2001. Ur sig 5/7 and so forth and so on." You then print it out and if need be send it to the ARRL for your WAS or WAC or whatever. If they accept it,fine. If not, they're cutting off their nose to spite their face. Why my cavalier attitude?

One has to be just plain stupid not to know that computers are overwhelming ham radio in interest/popularity. The ARRL wants to do everything possible to keep their own tuchuses afloat so why would they reject such down to earth e-QSLs? You think they're out to make it tougher on Joe Ham? And besides, we are a cut above the rest, aren't we?

By nature, QSL collectors are Boy Scouts except of course if they nowadays lean toward homosexuality which is taboo. At any rate this whole concept of e-QSLs is excellent. The price of postage keeps rising and so do QSL cards. Naturally if the ARRL goes along with the idea, their QSL printer advertisers will go crazy and try to convince them of the fact that every e-one will be bogus. But in the long run they'll shut up because it's a losing battle for them.

"Wags" you're a flaming genius but enough with all this pomp and circumstance regarding the formalization and authenticity of those cards. Want to work the country of "Goochaboola." Nowadays one can either listen for it on the bands and send a signal at 186,000 miles per second to snag it or look for a newsgroup, alt.goochaboola.politics and work it that way. Want to keep ham radio alive? INCORPORATE computer QSLs into it instead of scoffing at the idea. How about an autograph, "Wags?" You're a mover and shaker.

I really think cost is a secondary factor. The main factor is that e-QSLs
are
easy and fast. I known hams who have waited over a year for a QSL card.
Cost is important as well. There is the cost of printing and the cost
of mailing. $0.34 isn't much until you have to mail out 30,000 cards, then
we are talking real money. Even someone like me who only makes
a few thousand contacts per year it still adds up.

The other issue is Trusted E-QSLs will help streamline the awards process.
Not only in the amount of time it takes to process the award, but in
the time required to collect the QSL cards.

I have been getting a lot of interest in email about this concept.

Actually if they did away with all of ham radio except ragchewing on CW it would be no skin off my nose. But I guess what you're really saying is why should I care about false signal reports in a contest if I'm not a contester. I don't. I was just interested to see if there was any logical explanation for this "pointless" practice. Apparently not, and judging from some of the abrasive responses (by others) it is a rather sensitive subject... :-)

If I remember reading the FCC's reasons for denying the petition correctly, it was the FCC that made the comment, about not creating a service paralleling the Amateur service, not the ARRL. The ARRL's concern, again from what I remember reading, was allowing CBers to legally work DX would only encourage further use of amplifiers, a practice already out of control on 11m as it is among other things.

I've already been notified I'd be a pariah if I opposed this idea, so my
continued opposition can't hurt me anymore, I guess.

There are four reasons (at least) why this idea will not be widely adopted.

#1) Traditionalists (like me) who place high value on paper QSLs will not
participate in an eQSL scheme.

#2) Most major DXpeditions derive much of their funding from donations
received in the QSL process. They are unlikely to participate in scheme
which diminishes that funding channel.

#3) Perhaps less than 50% of the DXCC 'entities' have the required telecom
infrastructure to support routine participation by the average resident.

#4) ARRL is well down the path of deploying LOTW which will become the DXCC
"eLog", and thus the 'solution of choice' among serious DX players. Any
other scheme is second-tier right out of the box.

If that's intended to mean that I haven't passed any amateur licensing exams, I suggest you learn how to use an archive service, such as deja.com. You'll find my callsign postings I've made within the past year. When you do find it, you'll also find that I have been licensed as an Extra since 1997, well before the current re-structuring was put into place. I quit posting my callsign to prove a point, and that is that no matter what your opinion is, it seems that if no one posts a callsign that shows you've passed a hazing ritual of high-speed morse code testing, some people think that you're opinion doesn't mean jack shit. Thanks for proving my point.

I guess you don't live close to a large Amish community, do you? Such items are still very much in use there.

But since you want examples that are a little more up to date, I might also point out that there is nothing on a driver's license test that requires you to know how to drive a standard shift vehicle in order to obtain a standard driver's license. This is a matter of choice.

All that matters to you and certain others in this newsgroup, is that you'd rather argue semantics over the usage of the word "forced" in a sentence, than the reasons why high-speed code testing should have been retained for access to HF phone portions.

I like paper as well. That is one of the reasons I don't want to send my
paper QSL cards off. They do not exclude each other. In fact paper
QSL can also be trustedQSL with a bar code signature.

> #2) Most major DXpeditions derive much of their funding from donations
> received in the QSL process. They are unlikely to participate in scheme
> which diminishes that funding channel.

There may be a funding source from e-QSLs. Then again they maybe
paper only for DXpeditions and even if not paper only I think
people will still donate.

> #3) Perhaps less than 50% of the DXCC 'entities' have the required telecom
> infrastructure to support routine participation by the average resident.

Hmmm? This is where a system like LOTW and eQSL.cc breaks down. It
requires a connection. Trusted QSLs do not, it only requires a computer.
We could even set up e-buros which would collect Trusted Eqsl and send
them via snail mail to an upload point. That would still be faster and cheaper
than standard paper buros. Thanks for the idea!

Or how about this packet networks to send Trusted QSL? Is this legal?
It would be signing the plain text data, so there would be no information hiding.

> #4) ARRL is well down the path of deploying LOTW which will become the DXCC
> "eLog", and thus the 'solution of choice' among serious DX players. Any
> other scheme is second-tier right out of the box.

In the ARRL report the HQ staff was only task with doing it in Jan 01. They
are still review options. I hope one of those options will be a PK Trusted
QSL system. The problem with having a hugh database is that the
person sending and validating the QSL has to be connected. Trusted
QSL that isn't the case. They can be validate at anytime. Of course
what will happen is LOTW will start off as a free service then they
will charge $5.00 then $10.00, $15.00, etc. But now you are locked in
and they have you right where they want you. With a Trusted Open
Source/Standard system no one group will have total control. Which
is the way I like it.

I had thought of an idea to have instantQSL, where the sending would
give you a 6 or 7 character signature, but it turns out it would be

to easy to fake, but it was a great idea while it lasted!

Thanks, Phil. I didn't know that term or the history before.

I wonder how many complaints of "I reported it to the FCC but they never did a
thing" can be traced to lack of evidence.

Which myth?
>
> 1. There is no expert ham.

Sure there are - lots of them, on many different subjects. Usually they don't
go around claiming to be experts, though.

I think what you're saying is that the tests don't make one an expert, and
never have. That I can agree with.

>By definition, this is a hobby radio service for amateurs.

Nope. Nowhere in the definition (Part 97) does the word "hobby" appear. What
makes ham radio "amateur" is the prohibition against "pecuniary interest".
>
> 2. The license exam is an entrance exam, not a final exam.

I agree 100%. The exams are by no means comprehensive - and never were.

>It is after
>you get the license that one begins to really learn about radio.

I'm surprised that nobody has challenged this with the "friend who has a Ph.D
in EE" claims!

>The
>license exam is designed ONLY to introduce the basics.

Actually, there's a bit more to it. See below.
>
> 3. The license is a permit to learn about radio, not a graduation diploma
>granted because one passes the license exams.

It's a permit to USE radio. That's important - our licenses are for operating.
Learning is one of the goals, of course.

>
> 4. The various license classes were not designed to endorse skill or
>knowledge. Instead, the license class only shows that the person has
>demonstrated to the FCC that he/she has learned the basic skills necessary
>to operate properly and safely in the frequencies used by that license
>class.

Close, but again there's more to it. The license classes were meant to
incentivize learning - give hams a reward for learning more.
>
> 5. License class is not a gauge of knowledge or skill. A Novice could be
>very knowledgable when it comes to communications technology and electronics
>(complete with an engineering degree to back it up), and the Expert, by
>license class, could be a total idiot when it comes to both of these.

Then you are saying that the tests do not measure radio knowledge at all.
>
> 6. All of the above was as true twenty years ago as it is today.

I disagree. 20 years ago the tests were not the same, and neither was the
license structure nor the exam procedures.

> In fact,
>the recent changes in the license exam structure only emphasizes these
>truths even more.

To an extent, yes.
>
> 7. Recent changes in radio emphasis has reduced the desire for license

I think it has more to do with saving the FCC a pile of administrative work.

> For example, those only interested in VHF/UHF technology (because
>of employment or whatever), will see little gain from the license classes
>above Technician.

Agree 100%. The Tech was created for just this purpose 50 years ago.

>This further reduces the claim that higher license
>classes yields higher knowledge (different knowledge, yes, but not higher
>knowledge).
>
> Lets put this "expert" ham through license exam, and license class, myth
>to rest, people. It has never been true, and it is even less true today.

Ever see the study guide for the Extra of 1963? I have - it required a bit of
knowledge to pass.

--

Testing actually serves several purposes to the FCC.

The first, as you have correctly noted, is to determine that the licensee knows the basics. How well the tests do this is another question, of course.

The second purpose is to address problems in the ARS. For example, in the old days (>30 years ago), the exams were full of questions about the band edges, frequency measurement, accuracy of various methods of determining frequency, how to order a crystal, etc. The reason for this focus was that there had been problems with hams straying outside the bands, usually because of ignorance of the limits of the technology they used. Today you see less emphasis on such things because they are not much of a problem anymore, and more emphasis on other areas which are perceived problems.

The third purpose is to promote learning by rewarding it with more privileges. ("Incentives")

The fourth purpose is to promote certain technologies by introducing them to hams. That's why the questions on things like spread spectrum and EME, whcih are used by a tiny minority of hams but which are a significant part of the written tests.

There are other purposes, too, but those are the ones I can think of right now.

It is important to note that before 1953 there was an "incentive system" by which hams got more phone privileges by passing a more advanced written exam. This system was reduced in scope in 1953, when the FCC gave Generals and above all amateur privileges. But by 1958 the FCC was talking about reviving this system because they were unhappy about the perceived lack of technical knowledge of many hams of that time. It took ten years of proposals and counter-proposals before the changes known as "incentive licensing" were instituted.

No doubt about that. The issue with the steel quality only came about once the wreck was located a few years ago, and some samples were retrieved for analysis.

> It did not have a single cause. The list of things that
> could have prevented the disaster is a long one.

Now everyone can have fun debating which "cause" was the most significant single one, other than not hitting the iceberg, which could have prevent the ship from going down. This sure beats debating the CW testing, and exam issues, at least for a while. 8-)) Take care.

In all fairness to the complainants, a lot had to be put on the
back burner over the years because "lack of manpower" was real
(one of the negative supports which led to many of us retiring).

If the "hot topic of the month" was cable leakage, 2-m carrier
throwing took a back seat. When the "throwing" progressed to
cross-banding into the Public Safety channels, the priority was
put into the foreground. I was one of several "pendulum
disturbers" who wanted my investigators to work ham radio cases
despite regional and headquarters policy, and I took my lumps
because of that in the early 90s.

"Freebanding" is a colloquialism. It is actually unauthorized, 2-way transmissions on frequencies that are reserved for other radio services. These transmissions usually take place above the upper portion of the U.S. citizens band, and often in the 10 meter amateur band.

Evidently you don't accept that dictionaries have multiple definitions
of many words because they apply differently in different circumstances.
I do.
I also know from years of experience that one of your favorite ploys is
to choose one that is totally inappropriate for the circumstances in
attempting to make a ppoint that is totally wrong. Just as you are
trying to do here. Won't work.

Oh. So you know what is reasonable and no one else, including the FCC nor governments who make treaties, does. We see. Right.

Which means he was NOT forced. Circumstances do not force him go get a ham radio license. Some people decide that exactly and don't get one. So your point (that you are wearing on hour head) is moot.

Not at all. We KNOW that you routinely misuse such dictionary
definitions incorrectly to suit your own purposes.

Sometime, when you finally realize that all knowledge isn't between your ears, you will understand that everything pertaining to most subjects isn't required to be recorded in each post. When Jones said "when you touch the anode contact of a TV picture tube it doesm't matter where your other hand is" that is an excellent example. It DOESN'T matter, yet it was YOU who read something into that statement that wasn't there, and now you blame me for knowing what he was talking about.

Is there anything the you and Newington doesn't know all about?
FRhetorical question, of course, since we already know the answer.

How can I possibly misuse something that is down in black and white
in the dictionary? Seems your ignorance is showing.

Some forced tests are obviously reasonable, e.g. pilot's tests.
Some forced tests are obviously unreasonable, e.g. the requirement
for a deaf person to copy Morse code by ear per S25.5. Some forced
tests are debatable, e.g. Morse code tests for all HF hams.

Nobody has ever said he was forced to get a ham radio license so your statement is just a strawman diversionary argument. What was said was: In order to obtain legal HF ham privileges, he is forced to pass a Morse code exam. Whine all you want about it, that statement is true and is correct English.

Evidently you don't comprehend that the person who makes the statement
gets to choose the definition of the words he uses. Rail and whine all
you wish. The following is a fact: In order to obtain HF ham privileges,
a ham is forced to pass a Morse code exam, i.e. it is "required by the
circumstances" (the FCC rules). "forced - required by circumstances"

> I think we can safely assume that YOU do NOT operate on 6 meters. Guess where
> the first harmonic of some high powered CB transmissions fall?

Like I said, you evidently are not informed on the subject of
harmonics. The FIRST harmonic is the fundamental frequency. It's the
second harmonic that is twice the fundamental. And twice 27 mHz is 54
mHz. Exactly the Top End of the 6 meter band. Neither I nor any other
ham hangs out up there.
And why is it the first anyone hears of harmonic problems on 6 meters
from high powered CB comes from a freebander?

> Do your homework
> before posting...please.

yuk yuk

>

So, then he is deliberately a very willing renegade, an absolute radio
outlaw, and has no desire nor intent to change his stripes. We see.
And we also see that the FCC is not particularily interested, and is
MORE interested in giving him a freebee ham radio license or upgrade,
and ARRL is salivating to sign him up. Neat.

Sure, a well designed and written test can be a very effective learning
tool, assuming that it is designed to TEACH, not just to provide a
method of licensing with little or no intent of anything else.

Nowhere I know is merely passing a test in itself indicative of
anything more than passing a test, with no further detailed description
of how it was done. Ham radio is the most glaring example with which I
currently am familiar.

Lucky then that the FCC does see it as an unjustifiable
requirement. The issue of forced, mandatory, etc. is just
a semantics diversion anyway since I dare say no one has
ever raised that arguement in the FCC responses. I'm
sure the FCC wouldn't give much, if any, consideration to a
commentor that argued...No one is forced to get a ham license
so if they don't like a requirment they have the choice not to be
a ham.

>Now what do we do about that darned "forced"
>written test? Think we should take out all of those pesky technical
>questions? After all, if we simply know the regs and a few safety

YOU are the one saying that..NOT me. Anyone can make whatever
argument or comment they want...BUT it is always the pro-code test
folks like yourself that run the No theory up the flagpole.

>> >My state requires a motorcycle endorsement in order to ride a motorcyle.

The point is that neither is a valid requirement for the license
in question. You may disagree regarding code for HF ham
licenses, but I don't see your position being supported by
the FCC.

No victim needed, no help needed to make the point
with the FCC that code is passed its prime. The FCC knows
it is and only the treaty is keeping the code test requirement
going now.

>It is my observation that things which are deregulated or less regulated
>seldom work as well as they did under regulation.

A liberal mindset to be sure. Only the government can be trusted
to know what everyone should be doing.

Everyone is free to offer their opinion and arguments as
to what is reasonable. The FCC ends up making the decision
in the end based on their analysis. Do you have any doubt
as to the position that the FCC has regarding the value or
need for continued code testing?

Cheers,

True at that point in time. It does not, however, forclose
the person attempting to get the requirements changed.
That is the point I believe many PCTA folks want...i.e.
accept the requiremnts the way they are...after all, I did
it, so should you. If that mindset made any sense at all,
the diver's license tests would also require knowledge and
skill driving a vehicle with a manual gearbox.

Freebanders operating above channel 40 (27.405 MHz) would put any harmonic in the passband for TV channel 2. It would show up as noise on the video, and would be above 54.810 MHz. The video lower vestigial sideband crap from a local TV channel 2 station does far more to garbage up the 6m band than anything else I have heard. The upper 2 to 3 MHZ near the station is unusable, particularly on FM. The sideband sub-band section of 6m is normally not to bad, as long as you don't point your antenna at the TV station.

The video carrier for channel 2 is located at 1.25 MHz above the bottom of the channel so that puts it at 55.125 MHZ. The maximum power that can be used is 100 KW on channels 2 to 6. The spec's I have requires any video signal 1.25 MHz or greater, the lower sideband radiation must be 20 db below the carrier level or more. This means you can still have a huge signal at the top of the 6m band, and falling off as you go lower.

Frankly I think the local TV channel 2 station is much more of a problem on 6m than anything coming from a CBer's splatter box special foot-warmer, or a crappy cheap 10m export radio.

"if one wants"? Not forced. Voluntary.

I've stated that I do not. The argument I have is with your improperly
selected definition.

Wait a minute. "required by circumstances" wasn't part of the
definition you provided earlier. Are you amending your definition?
An HF amateur license is not mandated. Once chooses to obtain one.

> > Now what do we do about that darned "forced" written test?
>
> Nothing. Some forced tests are reasonable, e.g. a driver's test.

It is not a forced test, Cecil. It is not mandatory to obtain an
amateur radio license or a driver's license.

I'm still not buying either the definition or the premise.

Nah, that's not the reason, Cecil. We can't communicate because, 1) you haven't settled on a definition of the word "forced" yet (let me know when you've settled on one definition and wish to stick with it) and 2) you are intent on playing word games.

I'm tiring of this silliness.

I think it must have been my elementary school teachers, the ones who instructed me in the use of a dictionary who died and left me in charge of definitions. If I found you trying to use the definition of a computer bus to define the kind which drives down the block discharging passengers, I'd laugh, call you a goofus and point out that it is as silly as your first choice of definition for the word "forced".

> The fact remains: In order to gain legal access to the HF ham bands,

...more panicky wordsmithing? We've now added the clause, "if one doesn't already know it" to your second definition (not the one you originally trotted out) of the word "forced".

Nobody is forced to learn morse code, Cecil. You're looking sillier with each post.

Amending? Not really. I just have two dictionaries. "Required by
circumstances" is the definition of "forced" from my unabridged
dictionary. I get a hernia every time I pick it up so I don't open
it very often.

> It is not a forced test, Cecil. It is not mandatory to obtain an
> amateur radio license or a driver's license.

Nobody said it was mandatory to obtain an amateur radio license or a
driver's license. To imply that someone did say that is simply a strawman
argument because you have run out of logical arguments. In order to
obtain a driver's license, a driver is forced to take a driver's
test. That is a perfectly correct English language sentence, Dave.
Your disagreement simply shows your ignorance.

It already has meaning, Dick, and the prepositional phrase is part of
the meaning. Are you ignorant of conditional statements? To be more
precise: If a ham is to obtain HF ham privileges then he is forced to
pass a Morse code exam. That is an absolutely true statement.

Every definition that I have used means essentially the same
thing. "Done or produced with effort" means essentially the
same thing as "required by circumstances". Both definitions
are equally valid. One is from one dictionary and one is
from another. Do you object to all dictionaries or just some
of them?

You have completely missed the point so far, Dave. If one is to operate
a motorcycle legally it is mandatory that one take a motorcycle test, i.e.
one is forced (required by circumstances) to take a motorcycle test in
order to avoid illegal operation.

I agree with John. I like getting cards in the mail and I like to see REAL QSL cards that have some creativity. Some of the DX cards have beautiful pictures of their homelands, station, etc. Yes, they may cost us more (greenstamps to the DX stations) but there is a great thrill in getting overseas mail with the QSL.

Also, I think the ARRL should sponsor an award(s) the promotes real QSLing beyond what we have today with WAS, WAC, and DXCC - both stateside and international.

Apparently Mr. Cotter Pin, you have never sent a DX QSL, they cost of "one Hellva" (using red neck vernacular) more than $0.34 to send. In fact it is now for just a basic DX QSL as follows:

sending envelope $0.05
SASE $3.05 (up to)
QSL $0.15 (up to)
Total Cost $3.25 (up to)

Now to qualify this "up to" amount, this card was sent to a German QSL manager. I would guess the average cost is around $2.00 per card, if an American Ham is being nice and trying to pay their way.

What I cannot understand is this issue "pisses you off" so much. It just people putting ideas up for evaluation and process improvement. Personally the cheapest people in Ham Radio I have met are the ones who show up to Hamfests and want to give one $5.00 for a piece of equipment that really worth several hundred. These people usually are trying to buy low and then in turn sell high at another Hamfest. This does not have one damn thang (using neck vernacular again) with the cost of QSLing.

I dont know what exactly your problem is but dont take it out on the rest of us.

#1) No one says traditional cards would go away.

#2) If DXpeditions have this monetary need why dont they accept "Plastic
Money" donation via secure transactions on the internet or dial-in. (May be
this is why even after sending SASEs they still wont send their cards, man
gotta remember the basic financial law Money Talks BS Walks).

truckers from 'out west' are on various frequencies almost every day from here in New England. 28085 and 28535 are the most common frequencies. references in their chatter have placed them anywhere from mississippi to chicago and west into idaho and new mexico. they don't hear ham qrm most of the time because they are always running in close groups probably with squelches turned way up. they also show up on 28005, 28035, 28135, 28235, 28295, 28545, 29260, and 29295 regularly, though i have heard them on almost any 10kc channel from 28005 to 28295. they do seem to avoid 28300-28500. except for the frequencies above they only rarely seem to go above 28500, but that probably won't last.

as the arrl's recent washington mailbox column says there isn't much anyone can do about them unless you get the license plates and hand them to the fcc. i have given this info to riley and am hoping they can use their df network to at least narrow down some of these guys to particular interstates or areas so local df work can get started to track them down... the real question is who can do the ground work? the arrl doesn't seem to think they can do anything, though i have suggested they send their transmitter hunting book to all the oo's and see if kenwood will give them discount coupons for mobile hf rigs (to help their image after the truck stop stories). i would expect it will only take a few busts to get the word out that going about 28000 is a bad idea.

It is simple, can be and is. You selected a definition from your dictionary. It was incorrect for the situation. Now you're stuck with trying to defend it. As usual, you are now adding various clauses to add to the original definition you provided in order to attempt to make your case.

While I'm not generally god-like, it doesn't take much of a god to see through your flimsy attempt.

Twist in the wind.

Let me get this straight. Your excuse for adding a second definition
well after you provided the first is that your dictionary is too heavy
to lift? You're a yuk a minute, Cecil. Bill Clinton couldn't have done
better.

> > It is not a forced test, Cecil. It is not mandatory to obtain an

> Your disagreement simply shows your ignorance.

The sentence is properly constructed but it is inaccurate. If it is not
mandatory to obtain either a driving license or an amateur radio
license, no one is forced to obtain one any more than one is forced to
take a morse exam. If you have options, you are not forced.

You've stumbled on this one and now you are *forced* to live with it.

You're now attempting another game of adding material to your original lame statement in an attempt to make it valid. That "if" you're now using wasn't there initially. Neither was the "required by circumstances" portion. No one is forced to learn morse.

Nobody is forced to learn morse code, Cecil. I am forced to endure your obtuse nature. What? I don't have to put up with it? I have options? I guess I'm not forced after all.

That is a straw man. We're not debating whether I object to dictionaries. I object to you selecting incorrect definitions of a word. "I forced the door open." does not mean the same things as "I was forced to endure Cecil's endless games". You selected the wrong definition initially and are attempting to rectify that now.

It makes you look small.

You are wrong, Dave. That sentence is obviously accurate as any
ordinary prudent man can see from reading it. The definition of
"forced - required by circumstances" is directly out of "Webster's
New Universal Unabridged Dictionary", Barnes & Noble, ï¿½1996.

Nope, "Webster's Ninth New Collegiate Dictionary" gives the definition
as "forced - done or produced with effort". That overlaps the
definition of "forced - required by circumstances" which appears
in my unabridged dictionary which I rarely open because it is so large.
You don't have to be beaten with a stick to have force used against
you. Rules, regulations, and laws are almost always backed up by the
force of the issuing authority.

> Why the amendment (or are you attempting to use
> the new one as an addendum)?

Why the attempted diversion, Dave? Diversions are invariably employed
by people who are losing the argument. Please stick to the subject.
If a ham is to have legal HF ham privileges then he is forced
(required by circumstances) to pass a Morse code exam. You do
understand if/then statement logic, don't you?

People who consider themselves so expert that they don't ever have to
open a dictionary often get caught with their pants down. How does it
feel to have your omniscient opinion of yourself dashed by the simple
act of a dumb engineer opening a dictionary and proving you wrong?

The force of the State of Texas is behind the motorcycle test requirement.
If I want to operate a motorcycle legally in Texas, then I am forced
by the state to pass a motorcycle test. If I choose to ignore what is
"required by circumstances" then I will be forced to accept a traffic
ticket or worse.

Those are true statements, Dave, just like my if/then statements are true.
In case you have forgotten your logic, if the 'if' part of an if/then
statement is false, then the entire statement is true. Thus, "if a frog
had wings he wouldn't bump his ass when he jumped", is a true statement.
So is, "If a ham is to have legal HF ham privileges, he is forced to take
a Morse code exam."

Dave, I am trying to simplify the concept down to a point where even
you can understand it. There are many ways to state an 'if' function
that don't use the word 'if'. "In order to" is one way. If you had
simply accepted my original statement as true, then I would not be
forced to mount a detailed defense. I am not changing anything. I
am expanding on the discussion so you will eventually understand it.
Your objections required me to expand on my original statement and
then you rag on me for expanding on my original statement. Tsk, Tsk.
Hope you don't treat your children that way.

Hams with HF privileges are forced to learn Morse. They are "required
by circumstances" to learn Morse code. The "circumstances" is the FCC's
Morse code requirement.

You obviously don't understand the rules of logic, Dave. I suggest you stop considering yourself to be omniscient and open up a good logic book. If the 'if' portion of an if/then statement is false then the entire statement is true. If the 'if' portion of an if/then statement is true and the 'then' portion is true, then the entire statement is true. The only way an if/then statement can be false is for the 'if' portion to be true and the 'then' portion to be false. Every if/then statement I have made has been true. You were mistaken when you asserted that they were false.

If a ham wants legal HF ham privileges then he is forced (required by circumstances) to pass a Morse code exam. That's a true statement, Dave. There's just no getting around it. The force of the FCC is behind the Morse code requirement.

>
> Nobody is forced to learn morse code, Cecil.

I made an if/then statement which follows the rules of logic.
That if/then statement is true. According to the rules of classical
logic, your statement is actually false because HF hams are forced
(required by circumstances) to learn Morse code. There is an implied
'if' function in that statement.

I can make the same conditional statement without using the words,
"if" and "then".

In order to obtain HF privileges, a ham is forced (required by
circumstances) to pass a Morse code test.

It can be stated another way with the 'if' portion of the conditional
statement only implied.

HF hams are forced (required by circumstances) to pass a
Morse code test.

The implied 'if' portion are the HF privileges. If they don't pass the
Morse code exam, they are not HF hams. Thus the implied 'if' portion
of the implied conditional statement is false and therefore the entire
statement is true, following the accepted rules of classical logic.

> definition initially and are attempting to rectify that now.

Nope, both those definitions are valid dictionary definitions, Dave.
I correctly selected the one I wanted to use. You objected to my
selection. Now you are trying to convince us that you are an
omniscient guru when it comes to dictionaries and definitions. You
are not. You have made a simple logic mistake. Many people make the
same mistake.

"I am forced to endure Cecil's endless games" is a true statement
given some implied assumptions. The implied assumption is:

If I choose to argue with Cecil on r.r.a.p, then I am forced to
endure his endless games.

That is a true statement whether you choose to argue with me on
r.r.a.p or not. That is the rule of logic about which you are
mistaken. If you do not choose to argue with me on r.r.a.p, the
statement is still true according to the rules of classical logic.
That's why you are mistaken when you assume my if/then statements
are false. If the 'if' portion of an if/then statement is false,
then the entire statement is true, by definition.

If a ham is to obtain HF privileges then he is forced (required by
circumstances) to learn Morse code.

Sorry, Dave, that is a true statement.

The first overtone is the second harmonic. Both the fundamental and all the harmonics are partial tones (at least in audio work). I've never heard the term 'first harmonic' before, althought the meaning is unambiguous.

Ken,

This problem is like a cancer that has spread
through the body. The FCC cannot help, and
there is not a lot that you and I can do about
it either. If the intruders were stationary, there
might be a chance, but these guys are running
mobile, nose-to-tail. We have no chance to break in,
and they will never hear us on cw or rtty.

It gives me no satisfaction, but I saw this coming a
long time ago. During the latter stages of the last
sunspot cycle, intruders began to appear on the
ten meter band. Export radios first showed up
in East Asia, especially Indonesia and Taiwan.
These radios spread to our shores during the
sunspot minimum, and now show up every where.

It really hacks me off personally, but I really have
no idea what we can do. The FCC is no help.
because they would have to have personnel
in mobile DF vans in every truck stop to even
begin to effect a cure. I'm open to any reasonable
idea, but bitching to Mr. Hollingsworth is simply
preaching to the choir. I know that it is stooping to
their level, but I always try to operate on frequencies
ending in five. 28.085, 28.535 etc... I persevere and
possibly operating there through the QRM might
help prove a point to the intruders, and the point is
simply that there are already authorized users of their
new "company" channel. I also have a HTX-10 and will
do as another ham suggested, that is, to monitor the
most popular frequencies in an attempt to catch an
operator "in the act".

At any rate, I'm not going to simply concede the bands
to the illegals. If we give up, where will it end? Will the
next "company channel" be on 14.085, 7.085, 3.585?

Any reasonable suggestions welcomed.

Gary, WG7X

Cecil, ever Mister Twister the wordmeister, insists on replacing the proper word which is "required" with the word of quite different meaning, "required".

For sure not the first time we've seen him do this.

I suppose that everyone sees what you're doing, and of course you know exactly. Your conditional statement eliminates "forced" from possibility of being the appropriate word. The conditional statement makes it a choice, not a mandatory action, thus a "requirement" and not a forced action. The individual chooses whether or not to meet the stated requirement. It's his choice.

It is not a true statemtment. If wants to obtain HF privileges he is REQUIRED to learn Morse code. No one was ever forced to learn if. Nor is he required -nor forced- to gain HF privileges.

By Cecil's definition that frog is FORCED to grow wings IF he doesn't
want to bump his ass, and by gard you're FORCED to go to the store IF
you want to eat.

John O'Flaherty <oflahert@toast.net>
shared these priceless pearls of wisdom:

->The first overtone is the second harmonic. Both the fundamental and all
->the harmonics are partial tones (at least in audio work). I've never
->heard the term 'first harmonic' before, althought the meaning is
->unambiguous.

I respectfully disagree. When I operate a crystal on third overtone, I'm operating on the third resonance of the fundamental, or the third harmonic. That is, a crystal operated at 30 MHz. on the third overtone is operating a fundamental 10 MHz. crystal with the plate buckling three times instead of once per cycle.

The definition I used is the definition directly from the dictionary.
That it chaps your a$$ is irrelevant.

It's not *my* definition, Dick. It is the definition of a word
in the English language directly from the dictionary. Ignoring
other solutions to your hunger problem, if you want to eat then
you are forced (required by circumstances) to go to the store.
That is a perfectly valid use of the word "forced". If you would
just open a dictionary once in awhile before opening your mouth,
you would not appear to be so ignorant.

I suspect that some of the reported decline is QSLing, besides the cost,
is simply that for younger people, there is no longer anything particularly
exotic about communicating with people in far-off places. The world
has turned into such a small place that there is nothing special about
seeing images, or getting things from the other side of the planet.

For example, my enjoyment of radio comes more from playing with the
technology, and not really from "Hey! I just talked with a guy living
in Denmark!" I suspect I'm not alone in that.

- Rich

I didn't say a person had no choice so you are trying to erect another
strawman. The Morse code requirement is backed by the force of the
federal government. HF hams are forced (required by circumstances) to
pass a Morse code exam. Non-HF hams are not forced to pass a Morse
code exam. What is it about simple English that you do not understand?

Uhhhhh Dick, "required" is part of the definition of "forced". An HF ham is certainly "required by circumstances", i.e. "forced", to learn Morse code. If you don't like the definition of "forced", I suggest that you take it up with Webster's. I will continue to use my Webster's as the reference book for the words in the English language.

HF hams are forced (required by circumstances) to learn Morse code. If they don't learn Morse code then they are not HF hams. What is it about simple English language sentences that you don't understand?

>"dead-in-the-water".
....
>The cavet for the organization accepting this responsibility is they
>cannot require membership to access. They could charge a fee for
>registration maintenance to recover costs.

Sure they could. That is one of the great things about this
model. It isn't one enity that is responsible. The CA (Certification
Authority) is free to put any requirements they wish. What
the awards sponsers can not be allowed to do is unreasonably
restrict the use of a CA for validating public keys. This
could mean that your local radio club could and should become
a CA. They would have the burden of proof that they should
be consider a trusted CA. If a CA does become "untrusted"
their certificates would not be honored.

By using this model it creates a open market for CA and reduces
the chances that one enity will end of with control over
the whole thing. That is why I started this effort. To
prevent a single enity from becoming the master of eqsls.

I just created a reflect on yahoo groups. If you are interest
in this please join. thanks

>
>Gary, WG7X

I posted this yesterday. If hams find a person that is using a Radio
on Ham Frequencies while in the employment of another then the law can
be used to prevent employees of companies from illegal use of frequencies.
Let say that all the truckers from ABC company jumped on the Frequency of
460.500 across the US. Then they would be prevented from doing so by Federal
law. Now the same law applies to ham frequencies. The way to deter this type
of activity is to start finding out who is the employer and then with evidence
contact the FCC. The FCC would then notifier the employer that there employee
is breaking federal law while in their employment. Recordings, pictures and
license plate numbers would help identify the employees that are violating
federal law.
It is no different then if you see a trucker driving reckless. You call the
police and tell them who, what and where and they issue the ticket. We are
gathering evidence of criminal activity and turning it over to the FCC for
enforcement proceedings.
I am positive if that enough employers are notified that their employees
are committing federal crimes they will put a stop to it. After all these
people need a paycheck.

A lot of Californians consider Colorado "back east", and I
know a group of Ohioians (or is that "Ahiya-ins") for whom "out

>> in the real world of radio whether or not amateurs perform a
>> service (non-regulatory term) to anyone but themselves.

>BUT!~ The AGREEMENTS STILL require morse. PERIOD!

No. The only thing in S25 (amateur radio standards) of the ITU-R is
S25.5 which specifies that amateur radio license testing for any
license having below-30-MHz-privileges is manual international
morse code skill ("sending by hand and receiving by ear"). A singular
standard, not any sort of plural agreements.

Each and every ITU standard and recommendation is always
subject to review, study, and voting by ITU member nation
administrations. Resolutions obtained by such voting are
carried through by each member nation administration as
Good Faith. There is no specific "law" which requires strict
obedience to such agreements nor is there any "enforcement"
agency to prosecute those who do not abide by agreements.

>And the US has
>signed and, in so doing AGREED, to abide by that agreement.

The administration of the USA (Department of State, FCC, and NTIA)
voted on S25, the entire set of ITU-R amateur radio standards. They
did not "sign" some specific agreements on amateur radio but rather
accepted the ENTIRE set of standards and resolutions of the ITU, not
just ITU-R but ITU-T, the "telephone" part of international
communications in regards to tariffs, connections, standards for
signalling, etc.

>What part of this is so hard for you to understand?

Only those documents of the ITU which are not in English.

>And, since such agreements
>have been around for so many years, AND the US has abided by said agree-

>ment(s) in the past, it IS reasonable to assume we will abide by the
>current one until it expires or is replaced.

You may wish to review the radio laws of the nation of Japan. They
are a member nation of the ITU and they have a license class which
does permit amateur radio license granting below 30 MHz which
does not require a code test.

I have no problems with agreements. I have no problem with
recognizing that agreements are NOT ABSOLUTE LAW. They are
simply statements of Good Faith by government administrations.
It is considered good practice to abide by agreements, but those
agreements are not absolutes nor are they "enforced" by any
supra-law enforcement organization (there is none).

>We KNOW changes are in the
>works, It will remain until 2003 to see what these changes are...at
>which time, we can agree to it or not.

I know only that some nation administrations have stated they
will seek to change S25.5 at some time. That is public record,
but is "known" only by those who get such information. For that
matter, RS 8 (Radio Study group 8) of the ITU-R will take up S25,
is taking up S25, as a whole but what is not yet public is the
particular part of S25 which will be studied for change. Such
studies are done before a WRC.

Actions of the future are generally indeterminate. There is no
evidence than any human being has any power to "look into the
future" to know exactly what will happen. At best, one can only
presume certain trends in activities to carry on into the near
future based on near-past events and conditions.

>All this ballyhoo about Amateur Radio's status as a Service, hobby, or
>whatever, is achieving nothing. It's like sitting in your car which is
>on jack stands. Your engine is running, your speedo is indicting 45 MPH
>and you are going nowhere.

Strange analogy that goes nowhere.

>It is a FACT, Lennie, that Amateur Radio HAS
>rendered service to the community, state, and Nation.

Is US amateur radio defined principally on its service (non-regulatory
term)? Is it a (non-regulatory term) service or is it just one of many
radio services of US civil radio? It is the only one which is defined
specifically as a radio activity having non-pecuniary interests (that
defining "amateur").

The discussion seems to concern itself on the word "service." You
have to differentiate between a type and kind of radio defined in
Title 47 CFR ("radio services"), a military service, or some public
service rendered to the nation and citizens by its citizens.

>It is ALSO a fact that it is a HOBBY. Some hobbiests like to
>render public service when they can.

Part 97, Title 47 CFR, does not specifically state that amateur
radio is a public service to the nation...it is a radio activity engaged
in by individuals for non-pecuniary interests. The word "service" as
in "radio service" used throughout Title 47 is a regulatory term
denoting type and kind of radio regulated.

Individuals in amateur radio, just like individual citizens in the
nation, can always be of (non-regulatory term) service. That is
highly commendable. What is not of commendation is the
self-enoblement of individuals who are NOT of (non-regulatory
term) of service but use the panoply and patriotic bunting to
label themselves as being of (non-regulatory term) of service.

>I would like you to tell the local county ES officer that Amateur Radio
>wasn't a service during Hurricane Hugo. You have earthquakes, we *some-
>times* have hurricanes. During the floods in the Mississippi Valley, you
>are trying to tell me that Amateur Radio WASN'T involved? HORSE hockey!

You seem to be very, very sensitive to self-perceived negativisms.
Such is your particular problem, not mine. I mentioned nothing of
hurricanes or floods. The original posting of this thread was an
emotional tirade of an extra class radio amateur berating all other
radio amateurs for not doing enough for emergencies, such as
recently happened in the nations of India and Pakistan. I replied
with public information on earthquakes that already happened over
7 years ago in the state of California. I also gave a website for the
California OES and Auxilliary Communications Service (ACS).
I asked a question of "where were the radio amateurs during the
Northridge Earthquake of 1994?" Only one radio amateur in this
newsgroup gave a specific-detail source of where those amateurs
were...a few others seemed to explode with "outrage" even
though none of them had participated in that earthquake. None
of those listed any specifics in public view, only made generalities
and self-serving "patriotic" statements.

Now go back to the original posting under this thread and judge for
yourself just who is berating who.

>I asked this once before and I now ask it again: Can we agree that
>Amateur Radio is a R-E-S-O-U-R-C-E which has potential for assistance
>in local, state, and international disasters? Can we call it a
>"RESOURCE" and let it go at that?

US amateur radio is already defined by regulation. What you seem
to be seeking is self-glorification and enoblement courtesy of a
federally-issued amateur radio license. US amateur radio is
basically a hobby and those engaging in that radio activity not
for pecuniary interest are hobbyists.

>Lastly, IF, in your ever-so-knowledgable opinion, Amateur Radio is JUST
>a "hobby", why does FCC designate certain HF frequencies as EMERGENCY

>frequencies during disasters? Hmmmmm? This CAN be documented by contact
>ing FCC (1-800-CALL FCC) and ASKING them.

All US allocated emergency frequencies are given in Part 2, Title 47 CFR. That and all other Parts of Title 47 (to about October 1998) are free for download from the FCC website (under OET page documents) or the US Government Printing Office website. Printed copies of US law or regulations may be obtained from USGPO branch offices in over a dozen major cities or by mail order, but those cost money. Public-cleared military doctuments may also be obtained from the National Technical Information Service (NTIS). NTIS offers over 14,000 Army and similar publications for sale. I recommend NTIS TM 10-412INQ for large groups with appetites ($79 to US postal addresses). Others may have different tastes.

Under certain conditions the FCC will request certain frequencies (not just HF) in amateur radio bands be used for certain emergency conditions. That is NOT under discussion, was never intended to be under any discussion. Your question in that regard seems to serve nothing but an attempt at misdirection.

Now you go back to the first post in this thread and judge who was berating who when the USA has already had much experience with earthquakes and other natural disasters. Hint: It was done by someone who is an example of a licensee who holds the "highest" class lincense in US amateur radio.

Subject: Re: This Should Be A Warning
From: Jerry Oxendine <joxendi@bellsouth.net>
Date: Wed, 21 Feb 2001 18:33:11 -0500

Mr. "Last Word" Lennie,

>Here is a question. Have you ever heard of Military Affiliate Radio
>System (MARS)?

Yes, ever since 1952. Between 1953 and 1955 I was one of the
operators of a transmitter at Army radio station ADA which had
3rd priority use for MARS single-channel RTTY. The MARS
"station" for the US Far East Headquarters was an office at
the Pershing Heights main building. Receivers were at the remote
Receiver Site shared by USA and USAF NW of Tokyo. [ADA had
36 to 40 transmitters serving the Far East Command]

>Who makes up the majority of the member stations of this system?

5000 members who are over 17 and hold valid US amateur radio
licenses *PLUS* the sponsoring agencies of the U.S. Army,
U.S. Air Force, and the U.S. Navy and their personnel. The
Military Affiliate Radio System is sponsored by the Department
of Defense and is the overall command agency of MARS activities.

>I'll fill you in, ole "Last Word" Lennie. It is HAMS.

See the acronym words: MILITARY Affilicate Radio System.
The three principal military branches do their own daily
command and control for their respective MARS functions.
More on this can be seen on -

http://www.asc.army.mil/mars/ (Ft.Huachuca, AZ)

http://public.afcp.scott.af.mil/public/mars1.html (Scott AFB, IL)

http://navymars.org/ (USN, USMC, USCG)

>They pass traf-
>fic from overseas personnel, provide phone patches for service people
>and their families, and deliver messages and greetings.

Licensed radio amateurs can assist MARS in such public service
roles. 5000 do so. However, MARS is essentially a secondary
backup radio system to existing military branch radio
communications plus existing to provide emergency
communications in the USA and territories. Unlike non-member
radio amateurs, MARS can utilize spectra other than the

allocated amateur bands since MARS exists under the DoD.

>They do this
>on a volunteer basis. During Desert Storm, I myself passed a number of
>messages from local servicemen/women here serving there to their
>families here at home.

That is commendable.

Since the Gulf War of 1990-1991, Internet connections have
proliferated in all branches of the US military. It is now possible
for most members of the US military to communicate directly
with family and friends using Internet facilities.

>NOW. I want you to make more of a fool of your-
>self by telling me that hams do NOT provide service to our Nation and
>its citizens.

Why do you want others to make fools of themselves? Is that the
only way you can "win" message arguments?

How does an example of amateur radio's highest class equate to
"foolishness" about the Military Affiliate Radio System? How does
repetition of an example of amateur radio's highest class using
personal insults serve any point in Oxendine's message?

You were "required by circumstances" to learn Morse code. That's
the definition of being "forced" to do it.

Hey Dave, I've no doubt that you've forced yourself to endure in this debate. I think that's what may the applicable use of the word 'force' here. I forced myself to learn code. I wanted to, but I nevertheless met the conditions of Cecils definition of force. I had to make myself sit down and practice instead of sitting down and watching TV.

I think we were discussing motorcycles.

So I find myself lead by this inescapable logic to the conclusion that
since carbuerator repair isn't required for a drivers license, Morse
code shouldn't be required for any other license. :-)

Not the definition I was referring to, but also true.

One is forced to meet ALL of the requirements, because only one type of
license is offered.

I would have no problem with that, but the pro-code group might think there's still a reason to know it if you want to use HF phone. I've yet to see any good reason.

Then you should read what you quote. I mentioned criteria having relevance. You then make a comment about "written hazing ritual" when you could read for yourself that was not what I meant. I see that as twisting my words. As for our respective "biases", it's obvious that you have a pre-conceived conclusion as to how things ought to be, and will only allow facts that suport that conclusion, excluding all others which may disprove it.

You just don't get it, do you? No one said that it was mandatory to obtain an amateur license. The subject is the relevance of certain test requirements to obtain a license. Why is it so hard for you to stay on that?

So apparently you think that citing carburator repair rather than manual
gearbox testing makes a big difference in Mr. Sohls proof about Morse
code and amateur radio licenses? I guess I shouldn't be surprised.

The point is that what someone is going to do after their license is
granted is irrelevant. The requirements are based upon the privileges
which are granted by the license, not the desires of the applicant.

Your writing that I am wrong does not make it so. What the hell does a prudent man have to do with this? What happened to the original definition you brought forth. Have you now abandoned it in favor of this "johnny-come-lately" one you are now using?

You are a genuine homespun BSer, Cecil.

It overlaps? How does that take place, pray tell. Did you have the
lighter book under the one which is too large (formerly heavy) to open?
Why didn't you introduce the second definition at the same time as the
first? Was it because you were beaten over the head with the first one?

> You don't have to be beaten with a stick to have force used against
> you. Rules, regulations, and laws are almost always backed up by the

Yeah and your attitude is now *forced*-strained, unnatural or affected
(Random House College Dictionary).

There was no diversion. You simply switched definitions after choosing
the wrong one. Then you added the *if* portion. You can't debate
without injecting new information, used selectively.

Twist in the wind.

Dave K8MN

The *if* implies options. No one forces you to operate a motorcycle.
No one forces you to to take an exam for a motorcycle endorsement. No
one forced you to take a morse exam.

I can hear it now (Cecil to state police), "I was required by
circumstances to ride this motorcycle without insurance".

You should do comedy clubs, Cecil.

...not necessarily. There are numerous circumstances in which the frog
could still bump his ass. There are a number of circumstances where,
even if we had meat and bread, we couldn't make sandwiches. Yet you
blindly state that the statements are true. Tsk, tsk.

> So is, "If a ham is to have legal HF ham privileges, he is forced to take
> a Morse code exam."

Tsk, tsk, tsk. More false conclusions.

I hope you don't continue to drink to excess, Cecil. You've certainly changed the definition from the incorrect one you initially brought forth. That isn't expanding. It is changing the definition. I rag on you for that.

You were not forced to learn morse code. I was not forced to learn morse code. Leonard H. Anderson certainly hasn't been forced to learn morse code. "Forced - enforced or compulsory" (Random House College Dictionary)

> Hams with HF privileges are forced to learn Morse. They are "required
> by circumstances" to learn Morse code. The "circumstances" is the FCC's

What's the matter, Cecil. Don't you like your first definition any more? I'd really enjoy hearing tales of how you were compelled to learn morse.

And you are stating that there is no way that the "then" portion is
false. I strongly disagree. I further state that the if implies
options.

Your statement does not become true because you insist that it is.
No one is required to learn morse or to take an FCC exam. Both are
entirely optional.

Neat logic lesson, Cecil. The following statement is also true:
"No person is forced to obtain an HF ham ticket". So is, "If a person
does not desire an HF amateur radio license, then he need not learn
morse code."

Sure, both are valid but their meaning is not the same. You chose the incorrect definition and have since abandoned it for one more to your liking. No one has to be omniscient or a guru to see what transpired.

> "I am forced to endure Cecil's endless games" is a true statement

...and you mean that the use of the "if" word implies options to do or not do something. I have not stated that your "if" statements are false, only that, in typical Cecil fashion, you added them after making a blanket statement.

> If a ham is to obtain HF privileges then he is forced (required by

International treaties such as the Radio Regulations have the
force of law in the United States.

If one is found violating a provision of same which does not
have a counterpart in FCC Regs thw individual will receive an
FCC Notice of Violation (FCC Form 793 may be used) that instead
of starting with "You appear to be in violation of Section
xx.xxx of the FCC Rules" will start with "You appear to be in
violation of Section XXX of the International Radio
Regulations". The Communications Act does, in fact, obligate
compliance with treaty requirements.

As you know, US Government stations and foreign radio stations
are not subject to FCC Rules, and when one is found in apparent
violation of standards derived from the International Radio
Regs, they are cited (FCC Form 74) as apparent violations of Section
XXX of the International Radio Regulations. The Form 74 is
sent to the U S Government agency frequency manager or the
foreign government Adminstration, as appropriate.

If the FCC receives an equivalent notice from a foreign
Administration that an FCC-regulated station was found in
violation of the Radio Regs, the FCC turns around and issues
a Form 793 to the licensee citing the section of the Radio
Regs as reported by the foreign Administration.

When a specific Administration files a complaint with the ITU
that another Administration is intentionally disregarding or
violating some provisions of the International Telecommunications
Convention, the Radio Regulations, the Telegraph and Telephone
Regulations, a specific Agreement, or a ruling of the IFRB,
where an exception was not taken at the time of the signing of
the treaty or Agreement in question, the matter is referred to
mandatory arbitration under the auspices of the ITU Secretary-General,
per all such agreements.

That was the route we had to take when Radio Omdurman (Sudan) was intentionally causing harmful interference (Middle Eastern politics at work) by operating 2 kHz offset from a MF broadcast co-channel assignment with Kol Yisrael (Israel) while I was the latter's ITU liaison engineer at the Israeli Ministry of Communications (equivalent of the FCC) in the mid-60s. It took about 2 years but Omdurman was eventually brought into compliance by order of the ITU Secretary-General.

The Radio Regs are, in fact, enforceable treaty.

Wow!,

You guys are a tough crowd. At first, I was little surprised at you, Dick. But then I realized that you weren't the Dick I thought you were. No pun intended.

Harmonics are simply signals from a transmitter or oscillator occurring on whole-number multiples of the desired operating frequency. End of story.

If you look at the title of this particular thread, you'll notice the word "freebanding" contained therein. It's easy to forget that freebanding also includes operation on the frequencies directly below the lower limit of the citizens band, 26.9650MHz. I'm sure that all of you "seasoned" amateurs are aware that the 6 meter band, 50 thru 54MHz is open to US operators holding Technician class licenses and above. I'm not sure what all the excitement is about? Is it because RM called it the first harmonic? That's just symantics, I don't think there's anybody in this group, with an ounce of gray matter, that doesn't understand the implied meaning of his statement...whether technically correct or not. I refuse to believe that a group of grown adults could be this petty, I'll just assume then that it was merely a "misunderstanding."

Now back to Dick,

>So, then he is deliberately a very willing renegade, an absolute radio
>outlaw, and has no desire nor intent to change his stripes. We see.

Well Dick, I'm not sure if you're referring to me n the previous post or Mark, who made the original proposal. That first sentence describes neither of us, so I don't really see the connection there. I'm NOT a freebander and from what I've read of Mark's original post, he HAS changed his stripes...and encourages others to do the same. I respectfully suggest you reread his post.

>And we also see that the FCC is not particularily interested, and is
>MORE interested in giving him a freebee ham radio license or upgrade,
>and ARRL is salivating to sign him up. Neat.

I'll agree with you on the FCC's disinterest. H O W E V E R, nobody gave me a freebee ham radio license and I was a member of the ARRL before I became a licensed amateur. I "earned" my GROL long before that and my previous involvement with 11 meter radio laid a nice rudimentary foundation, thank you. As for Mark, I'm pretty sure he too is already an ARRL member and quite frankly, I personally wouldn't be too surprised if he were already a licensed amateur. Just a gut feeling.

I did attempt to satisfactorily answer a statement re. how the ARRL has "attacked" CB. If calling it like it is makes me a renegade, then I accept the title with pride. If you re-read the thread perhaps you'll get a better feel for the context in which some of these posts are worded.

73 de Bert
SSB411D

P.S. Thanks RM for the defensive support, but in the future don't bother replying. Statements like these are merely a con"troll"ed effort to fan the flames. Thanks again.

"Will Hunting" is a fictional character, not a real person. He is portrayed as a super-genius who has taught himself the equivalent of several doctorates in a variety of subjects, but who works as a janitor and gets in trouble with the law. He may have lots of knowledge, but he doesn't use it. He avoids the responsibility of actually DOING anything constructive besides custodial work until the very end of the movie.

He knew the price of everyhting and the value of nothing. (Shaw's definition of a cynic).

Besides, how smart can a guy be who almost let a gal like Minnie Driver get away?

Why limit it? We can have two debates: one on things that would have prevented the collision in the first place, and one on things that would have prevented the loss of life if the collision had occurred anyway.

For example, a bigger rudder would have allowed the ship to turn slightly faster, and avoided the iceberg completely. Better steel might have reduced the damage enough so that rescue ships would have gotten there before she sank. (Almost all of those lost died of hypothermia from being in the cold water.)

>This sure beats debating the CW testing, and exam
>issues, at least for a while. 8-))

Those are dead issues, anyway. The code test in the US is reduced to the minimum, other countries are rapidly following suit, and not much else can be expected before the treaty requirement changes. The writtens won't change much because the FCC doesn't want them to - best we hams can do is make the question pools bigger and better.

> Take care.
>
You too! The lessons of Titanic need to be learned by each generation. The biggest single cause was plain old carelessness - lack of attention to detail.

Far as I can tell that's where Cecil's argument breaks down. When one forces himself to do something is he really being forced? Not at all. He has a choice to not force himself, but he declines.That's self inducement instead of force.

Delude yourself all you choose, Dave. You have been exposed as being
ignorant of the definition of a word in the English dictionary. There's
no way for you to recover.

Yep. And if you only want to operate Pactor you've got to learn both
Morse code and all that other non-applicable stuff.

Circumstances forced you to MAKE A CHOICE whether or not you wanted to learn Morse code in order to meet the reqiurements of a HF ham radio license. That's the only force involved.

The two definitions overlap but the second one is a tad closer to
the concept I wanted to convey. Does your self proclaimed omniscience
limit me to only one definition?

> one forced you to take a morse exam.

You have missed the point entirely, Dave. Texas motorcycle riders are
forced (required by circumstances) to pass a motorcycle test. HF hams
are forced (required by circumstances) to pass a Morse code exam.
Non-motorcycle riders are not forced to pass a motorcycle test.
Non-HF hams are not forced to pass a Morse code exam. How can you
possibly not comprehend such a simple concept.

Which brings us back to the question. Why is Morse code skill required of
people who don't use it while manual transmission skill is not required of
people who don't use it?

Easy, oh clueless one. Something that is required by circumstances
normally is produced with some effort.

> Did you have the
> lighter book under the one which is too large (formerly heavy) to open?
> Why didn't you introduce the second definition at the same time as the

It is because I have arthritis and the big dictionary is painful to
pick up. The two definitions are essentially the same.

Dave Heil wrote:
> And you are stating that there is no way that the "then" portion is
> false. I strongly disagree.

Take the logic statement If A then B. If A is false then the entire
statement is true. If A is true and B is true then the entire statement
is true. If A is true and B is false then the entire statement is false.

If a ham is to obtain HF privileges, he is forced (required by circumstances)
to pass a Morse code exam.

If a ham doesn't have HF privileges, the statement is true.

If a ham has HF privileges and has passed a Morse code exam, the
statement is true.

If a ham has HF privileges and hasn't passed a Morse code exam, the
statement is false because that outcome is impossible (outside of fraud).

So yes, it is impossible for the 'then' portion to be false because,
neglecting fraud, it is impossible for an HF ham not to have passed
a Morse code exam.

The logic is completely valid and consistent.

> Your statement does not become true because you insist that it is.
> No one is required to learn morse or to take an FCC exam. Both are
> entirely optional.

You continue to be confused. HF hams are required to learn Morse. Hams
are required to take an FCC exam. Neither is optional for hams. Please
show me a ham who has not passed an FCC exam. Please show me an HF ham
who has not passed a Morse code exam.

> operate one's station with a MARS callsign in MARS activities.

The following is a reproduction of the USAF MARS home
page, converted from HTML to conventional ASCII text as
near as possible to the original format -

==========

United States Air Force Military Affiliate Radio System (MARS)

The Air Force MARS office is located at the Headquarters, Air
Force Communications Agency (AFCA), Scott AFB, Illinois.
This office is a headquarters staff function, serving as the
primary point of contact, systems manager, and focal point for
all matters pertaining to Air Force MARS activities, functions

and management initiatives in support of DOD objectives. Governing directives for Air Force MARS: Air Force Instruction (AFI) 33-106, Managing High Frequency Radios, Land mobile Radios, Cellular Telephones, and the Military Affiliate Radio System; Department of Defense Directive (DoDD) 4650.2, Military Affiliate Radio System. The Chief of MARS is responsible for the dissemination of policies, procedures and directives concerning administration, operations, training, frequency management, equipment and logistical matters for the worldwide USAF MARS program. Represents HQ AF, HQ AFCA, Air Force MAJCOMs, and FOAs interests at meetings and conferences at the Joint Services MARS Panel, Office of the Assistant Secretary of Defense for command, control, communications and intelligence (OASD/C3I), National Communications System (NCS - SHARES), Federal Emergency Management Agency (FEMA), and other federal, national and state entities. Administers to an affiliate volunteer population of approximately 3,000 members and 300 contingency military stations consisting of active, reserve and Air National Guard unit MARS stations. Establishes and maintains procedures to manage, control and account for surplus government property used to support the affiliate portion of the Air Force MARS program. Coordinates closely with the AF Frequency Management Agency. Maintains an active liaison with the Army and Navy-Marine Corps MARS Chiefs. Promotes Air Force and public interest in MARS and amateur radio. Attends and participates in national and regional conventions of amateur radio groups; attends regional MARS conferences. The point of contact for all USAF MARS matters is:

Hq AFCA/GCGS (MARS)
203 West Losey Street, Room 3065
Scott AFB IL 62225-5234
Phones: (DSN) 576-5552; Comml (618) 256 5552

What is MARS?

The Military Affiliate Radio System is a Department of Defense sponsored program, established as separate managed and operated programs by the Army, Navy, and Air Force. The program consists of licensed amateur radio operators who are interested in military communications. They contribute to the MARS mission providing auxiliary or emergency communications on a local, national, and international basis as an adjunct to normal communications.

MARS History?

In November 1925, the Army Amateur Radio System (AARS) was formed by a few dedicated pioneers in the United States Army Signal Corps. This organization continued until the

start of World War II when operations were suspended. Army amateur radio was authorized to resume operations in 1946 and the Army Amateur Radio System was reactivated and functioned as such until 1948 when the Army and Air Force established the Military Amateur Radio System, later renamed the Military Affiliate Radio System (MARS). In 1962, the Navy-Marine Corps MARS program was launched making MARS a joint service program.

MARS Mission

Provide Department of Defense sponsored emergency communications on a local, national, and international basis as an adjunct to normal communications.
Provide auxiliary communications for military, civil, and/or disaster officials during periods of emergency.
Assist in effecting normal communications under emergency conditions.
Create interest, and furnish a means of training members in military communications procedures.
Provide a potential reserve of trained radio communications personnel.
Handle moral and quasi-official record and voice communications traffic for Armed Forces and authorized U.S. Government civilian personnel stationed throughout the world.
Conduct an appropriate Amateur Radio program as a part of the annual celebration of Armed Forces Day.

Eligibility to Join MARS

The applicant must:
Be 18 years of age or older.
Be a United States citizen or resident alien.
Possess a valid amateur radio license issues by the Federal Communications Commission.
Have digital capability, i.e., Packet, Amtor, Pactor, or G-TOR.
Possess a station capable of operating on MARS HF frequencies.

MARS members must agree to operate in accordance with the rules and regulations governing MARS as follow:
A Minimum of 12 hours participation per calendar quarter with 6 hours in their primary HF assignment.

Benefits of MARS Membership

Add to the enjoyment of your, amateur radio hobby through the expanded horizon of MARS.
Become part of the Air Force MARS worldwide communications system.
Increase your communications skills and capabilities.

Selected correspondence courses in communications-electronics subjects are available free to MARS members from their respective affiliated serve after completion of six months active membership.
Operate on specially assigned military radio frequencies in voice, teletype, PACKET and other digital modes of communications.
Join a group of dedicated fellow radio amateurs participating in meaningful public service.
Gain a feeling of being associated with a military mission and contributing to the welfare and preparedness of the nation.
Participate in regulated, disciplined radio nets with structured lines of organization and very specific operating rules.
Participate in the MARS Excess/Surplus Equipment Program after 6 months active membership. Issue of equipment is based on availability of equipment, and possible assigned mission of individual activity. The granting of MARS membership to an individual or activity does not in itself convey an automatic right or entitlement of the recipient to receive or demand MARS property.

Typical MARS Frequencies

MARS members stations meet periodically in scheduled networks on military frequencies outside of the amateur bands. There are various types of networks and each accomplishes a specific goal. For example, administrative networks to take care of much of the day-to-day management of the program; traffic networks which exist solely to pass third party traffic; and of course, emergency networks which are established to provide for communication needs during periods of emergency. There are also technical nets and training nets. MARS nets operate in different modes. Although high frequency (HF) single sideband (SSB) voice is predominant, there are RTTY, VHF, PACKET, other digital modes and even slow scan TV nets. You may not join or belong to more than one MARS service at the same time.

How to Join MARS

To join, send a request for application forms to:
E-mail: USAF.MARS@scott.af.mil
or,
(Conventional mail)
Chief Air Force MARS
HQ AFCA/GCGS (MARS)
203 W Losey St, Room 3065
Scott AFB, IL 62225-5222
May 2000

Return to top
==========

I would requrest that any comments, critiques, or name-calling of any kind concerning USAF MARS to be directed to Chief, Air Force MARS, at Scott AFB rather than myself.

In "my day" in radio, being the 1950s, 1960s, 1970s, 1980s and 1990s, inclusive, I had little contact with MARS activities. I can only comment on what the MARS chiefs of the respective military branches have stated publicly. Any "behind the scenes" or hidden descriptions of "insider" experiences or definitions are inadmissible as inaccurate and irrelevant hearsay.

Is that the point? All along I thought the requirements were
established by the licensing authority.

As far as US amateur radio is concerned, an amateur license
is granted by the FCC, not the desires of the already-licensed.

>Please point out *specifically*, in the quoted material above, where I said
>*anything* about 5 WPM being high speed. You've got a serious comprehension

>problem.

Heil goes after misdirection a great deal. Irrelevancies are cited well off the mark due to an inability to rationalize His having to take a 20 WPM morse test (do we know if he got a waiver?).

So far, the PCTAs have misdirected by citing: (1) Pilot licenses (not applicable); (2) marriage licenses (not applicable, no test); (3) rodeo cowboys supposedly licensed by FCC (none, not applicable, implied by Heil). Those that do not use rationales for continuation of "hazing rituals" will bring out misdirection by trying for English mis-use. :-)

Heil seems to insist that all do as He did or be thought "inferior." He has already said He is "superior." He has further stated that only His, and His alone, definitions (of anything) shall be considered suitable, correct, and relevant for any sort of discussion. That should end any discussion.

> Could the word 'when' be used instead of 'if'?

Any number of word combinations logically equate to the 'if'
function of an if/then statement. The 'if' function is often
implied in the syntax. The following statement:

An HF ham is forced (required by circumstances) to pass a
Morse code exam.

has the 'if' function implied. This is what Dave is missing or
ignoring. An HF ham has HF privileges. How did he get them? He
passed a Morse code exam. He cannot have HF privileges without
passing a Morse code exam. Therefore, if a ham has HF privileges
he was forced (required by circumstances) to pass a Morse code
exam. There is no other way the FCC will legally allow a ham
on HF. The Morse code requirement is required by the circumstances
which exist at the FCC. That's the definition of "forced".

> "No person is forced to obtain an HF ham ticket".

Of course it's true, Dave. But since nobody has asserted that anyone
is forced to obtain an HF ham ticket, it is also irrelevant and can
simply be considered as your strawman diversionary tactic. You continue
to miss the point. HF hams are forced (required by circumstances) to pass
a Morse code exam. The Morse code requirement is certainly required by the
circumstances which exist at the FCC. That, my friend, is the definition
of "forced", straight from Webster's.

But that's not my argument, Dick, that is Jim's statement. Of course,
since you cannot refute my argument, you choose to divert attention
away from my argument to Jim's statement.

I have been very careful with my syntax. I have used passive voice.
HF hams are forced (required by circumstances) to pass a Morse code
exam. Non-HF hams are not forced to pass a Morse code exam. The
Morse code requirement is "required" by the "circumstances" existing
at the FCC. That's the definition of "forced". Would Jim have forced
himself to learn Morse code if he had not been forced (required by
circumstances)?

Dave Heil wrote:
> Sure, both are valid but their meaning is not the same.

Their meanings certainly overlap and their meanings are the same
in the overlap area. "Produced with effort" and "required by
circumstances" can certainly mean that the effort required was
required by the circumstances. Can you think of a case where
the effort required was not required by the circumstances.

> ...and you mean that the use of the "if" word implies options to do or
> not do something.

The 'if' word implies conditions. Those same conditions are often
implied without the existence of an 'if' word. That is what you are
missing or ignoring. What is implied by "HF ham"? The implication
is clear. An HF ham was forced (required by circumstances) to pass
a Morse code exam. Non-HF hams are not forced to pass a Morse code
exam. You have painted yourself into a logical corner and are
arguing an impossibility. Neglecting fraud, it is not possible for
an HF ham to exist without passing a Morse code exam.

> > If a ham is to obtain HF privileges then he is forced (required by
> > circumstances) to learn Morse code.
>
> Sorry, Cecil. I don't buy the "then" portion of your statement.

You don't buy that the Morse code requirement is required by the
circumstances existing at the FCC????? Not to buy that, Dave, is
not to buy reality. Please produce an HF ham who was not forced
(required by circumstances) to pass a Morse code exam.

Nope, the fact remains - HF hams are forced (required by circumstances)
to pass a Morse code exam. Non-HF hams are not forced to pass a Morse
code exam. The Morse code requirement is required by the circumstances
existing at the FCC. That's the Webster's definition of "forced".

I agree with the Texas location. These folks were heard in North Carolina, at a time when Texas beacons were also coming in.

One gave a mile marker of 869. It takes a big state to have that many miles on a given highway!

Is there a central place where data is funneled, prior to sending it to FCC?

> compliance with treaty requirements.

What is the specific codification of US Law in regards to "violation of international treaties?" Or agreements? Or memberships for some international purpose? How is membership by the USA administration in the ITU regarded as "law?"

Those questions are asked for the purpose of clarification since they are not easily seen by ordinary layperson citizens of the US.

Not having violated any FCC regulation, I have never seen any such FCC Notice of Violation. How is that Notice of Violation applicable to "international law?" As far as I am concerned as a US citizen within the borders of the USA, I am bound only to US law.

> As you know, US Government stations and foreign radio stations
> are not subject to FCC Rules, and when one is found in apparent

> sent to the U S Government agency frequency manager or the
> foreign government Adminstration, as appropriate.

I do NOT "know the above." How is that applicable to international standards agreed upon by a UN body? If there is violation of an "international law" then why is an FCC form used? What is the importance of an FCC form number?

> If the FCC receives an equivalent notice from a foreign
> Administration that an FCC-regulated station was found in
> violation of the Radio Regs, the FCC turns around and issues
> a Form 793 to the licensee citing the section of the Radio
> Regs as reported by the foreign Administration.

What are you trying to say there? Is the USA's FCC some kind of supra-national radio enforcement agency? Or is that Form simply issued by a US agency citing a US citizen? If that is the case, why is this so applicable to "international law?"

> When a specific Administration files a complaint with the ITU
> that another Administration is intentionally disregarding or
> violating some provisions of the International Telecommunications
> Convention, the Radio Regulations, the Telegraph and Telephone
> Regulations, a specific Agreement, or a ruling of the IFRB,
> where an exception was not taken at the time of the signing of

> mandatory arbitration under the auspices of the ITU Secretary-General,
> per all such agreements.

How is some "international law" enforced in that regard? Do specific Radio Forces from complaining countries invade the radiospace of the "offending" country? :-)

Let's cut to the chase there. What I am saying is that international agreements or treaties are only "enforceable" as the member nations want to make them, enforced by administrations of specific countries internally. As such they are handled "in-country" by a country's regulating agency.

It's fairly obvious that treaties and agreements should be handled in Good Faith by all nations involved in such treaties or agreements. There is NO supra-national agency that can enforce any treaty or agreement violations. The closest the earth has to such a body is the United Nations which can, and has, made resolutions "allowing" the use of force against certain countries who have violated any treaty or agreement. That force is enacted by member nations, not by the UN itself. The UN has no specific "international law" enforcement body, only various administrations who agree to enact force after a resolution passed by the UN.

> That was the route we had to take when Radio Omdurman (Sudan)

> latter's ITU liaison engineer at the Israeli Ministry of
> Communications (equivalent of the FCC) in the mid-60s. It took
> about 2 years but Omdurman was eventually brought into compliance
> by order of the ITU Secretary-General.

That's all very interesting, but how does a Sudan-Israel conflict over MF broadcasting involve US amateur radio?

Lastly, how is it that one "highest" rated US radio amateur can berate other US radio amateurs for "not doing enough" on natural disaster aid when there is ample evidence of the USA having already suffered natural disasters in the near past?

> The Radio Regs are, in fact, enforceable treaty.

As far as I am concerned, US law and regulations apply to US citizens. Since when do US citizens "sign treaties" to "agree" to US law and regulations? Or are they "signing international treaties" or something just to be subject to US law within US borders? If the US administration wants to set US law and regulations according to some international resolutions and standards, fine with me. I've supported that in the past and see no problem with that. However, if you want me to abide by some "international law" within the boundaries of the USA, then I have to ask some deep specifics and do a lot of questioning, some of it possibly taken negatively by those whose agendas involve newsgroup message points.

I know of no state that requires knowledge of either in order to obtain a
driver's license. Too many people are going off on a tangent and making
comparisons that are totally without thought or reason.

I posted this nearly two weeks ago (give or take) and you're just now
responding to it?

While "Good Will Hunting" may be a work of fiction, the names of people that I
posted along this thread are not fictional characters. They were all
successful, and none held a college degree. It's interesting how you ignored
that part of the discussion.

A person I met through a co-worker bragged about using a ham radio and ham frequencies to talk to other drivers from the same company on the road (it seems one of the drivers at the company started it, bragged about it, and other drivers followed). He even showed me the radio in his truck (one of those "imported" CB rigs). Neither of them (the co-worker or this driver) knew about my ham radio involvement.

The following Monday, I contacted a manager at the company, explained that this person was violating FCC rules, and suggested that I might file a complaint with the FCC. I followed up with a letter, complete with quotes from FCC regs.

About two weeks later, I asked the co-worker about the driver and was told that he had been fired. As I understand it, the company put out a notice to remove all illegal radio equipment from their trucks and later inspected the trucks to see if employees complied. When a radio was still found in the driver's truck after the notice, he was fired.

The purpose of this is to point out that the company itself, not the FCC, may be the best place to start if you discover a driver operating without a license in the ham bands. Many companies probably would not want this type of trouble, so may take more immediate action. Remember, even the independant drivers work for companies (the names on the trailers), so this may even work for them also.

I see that I was wrong about the actual usage of the term 'overtone', and that the third overtone is the third harmonic of the fundamental, or the fundamental times three. Still, 'first overtone' doesn't sound right to me, because there's nothing 'over' about it, and the word 'fundamental' already means that.

Perhaps you can trot out several additional definitions in an attempt to make your case. Certainly the first one wasn't applicable at all. Since I've already stated that I claim no omniscience, why do you persist in using that term. Are you omniscient in your ability to choose the correct definition from a list of several? Apparently not.

If a ham is to obtain HF privileges, he is forced (required by
circumstances)to pass a Morse code exam.

So if the B portion relating to being forced to pass a morse exam is
false, the entire statement is false. So "he is forced (compulsory) to
pass a morse exam." can be a false statement. That makes the entire
statement false. Apparently the whole thing hinges on that definition
of the word forced.

How about this one: If obtaining an HF amateur radio license is not
mandatory then no person is forced (compulsory) to pass a morse exam.

Does that meet your logical requirements? It sounds pretty good to me.

> The logic is completely valid and consistent.

See my logical response above.

> > Your statement does not become true because you insist that it is.

> show me a ham who has not passed an FCC exam. Please show me an HF ham
> who has not passed a Morse code exam.

The false part is that no one is required to obtain an HF ham ticket.
While a morse exam is part of becoming an HF ham, nobody is forced to
obtain such license. I've never argued that there are HF hams who have
not passed a morse exam, I've argued that morse exams are not forced.
Please stick with the discussion at hand.

I haven't gotten that far yet.

Of course some people are successful without degrees. And others with degrees are not successful. No degree or other qualification is a guarantee of success.

But if you or a loved one needed to have an operation, would you want a surgeon who had been trained in a good medical school and who had a medical degree, or one who was self-taught from books in the library?

Plus the VE fee and a trip to a testing session.

The FCC WANTS cbers and "freebanders" to get ham licenses and go legal. That's why the test requirements have been changed over the years. It's much easier to enforce the regs on licensed operators than on unlicensed ones.

But, Cecil, if no one is required to obtain an amateur ticket, how can one be forced to learn morse code? It is certainly an integral part of the equation. Your definition (in this latest incarnation) only fits if someone is desirous of becoming an HF ham. Your earlier "produced by effort" definition did not fit at all and has since been abandoned by you. I'm happy that you've found one which suits you better. This said, one is not forced to learn morse code. There is an option of learning it or not learning it.

"I forced the door open" and "I was forced to surrender my money" do not use the same meaning of the word "forced". In the second, no effort is implied.

The word "if" implies options. The "if" tells us that the individual has choices open to him.

> > > If a ham is to obtain HF privileges then he is forced (required by

No, I do not accept "then he is forced to learn morse code". That is what is being debated. You have not proven that anyone is forced to learn morse code.

From what you have said now, it appears YOU want the
code test as a means to draft new code users...which
is not the purpose of the requirement. If someone sends
poor code does that have a BIG effect on other hams...or
only an effect on the other person trying to copy code.

If you want to hype the narrowbandwidth value of morse
over voice, that's fine, but the FCC sure hasn't bought
that argument as a justification for code testing.

Cheers,
Bill K2UNK

Sounds like a good thing to me. Even the "non-prior outlaw" group
of hams has it share of "bad-habit" characters.

The impression you gave originally implied bad things.
Your clarification indicates pretty good results.

There are enough holes in it to fly a 747 through. But then again, you
can dismiss anything as irrelevant and change both conditions and
definitions to suit your argument. I don't have a personal problem in
this. I don't accept your view. Nothing can be settled unless you and
I agree that it is settled. I have not agreed.

No one is forced to learn morse code.

I gave you a fairly lengthy list of items, all of which you described as "required by circumstance". These were the kinds of things which a normal person would never say are forced on him like picking up a newspaper. But to you they all were. It is apparent that you do not believe in free will or choices open to man.

Mother nature, by the way, is a ficticious character.

Dave K8 Mother Nature

Well then, I sincerly thank you for accepting my view. If you were not
"required by circumstance" to learn morse code, you'd be hard pressed to
state that others were given that all had options to undertake it.

> The people who knew Morse code before they became interested in getting

...not unless these characters were ordered by a judge to become HF hams. Amateur radio is not a mandatory activity any more than newsgroup posting is.

You're writing more Bravo Sierra, Cecil. My statement was: No one is forced to learn morse code.

No one is forced to enter amateur radio....absolutely no one. Produce a person who was forced to learn morse.

I am aware of none. I'm the one who maintains that no one is forced to
learn morse code. It is only within the last few posts that you've come
around to my way of thinking. I believe that we have choices open to us
in undertaking any action. Of course there can be consequences to our
choices but we still have the choices open to us.

> > A statement does not become irrelevant because you say it is irrelevant.

If a guy sez, "Ham radio still requires passage of a morse code exam.
I'm not going to learn any stinking morse code", that is his choice. He
had options. He was not forced to learn morse code and he was not
forced to enter amateur radio. Then again, he is not going to become an
HF ham.

I just pinned your conundrum.

> seen any changes, for better or worse.

Telephones, cable service, airlines and the like have been deregulated
for some time. Prices continue to go up; service goes down. As far as
amateur radio, I've noted a number of newer ops, mostly using voice
modes who have some pretty bad operating habits and a pronounced
"accent". It hasn't kept me from working some of 'em.

I've already accepted that and I've been living with it. I'm still
looking for the explosion in growth. According to some, many of the
newcomers will be professionals who will dazzle us with technological
advances. I'm waiting for that too.

No one who desires to become a ham is turned away at the gate--not even Leonard H. Anderson. Allowed to become a ham? Is this your pet phrase. I acknowledge that there are examination elements required. That still doesn't mean that anyone is forced to undertake them.

No one is forced to learn morse code. No one is forced to become a radio amateur.

You can't lose when you change the statement, dictate the definitions
and set the conditions. Of course you'd have to have the aquiesence of
your opponent. Unfortunately for you, I'm not agreeing to that.

> > Doesn't win you many points though.

So when you do these things--using the German military terms, assigning
ranks and coming up with the droll names, that is humor. When someone
else does it to you, it is an attack or denigration. You certainly have
a dual standard.

> Quit acting like some bad stereotypical Oberst. This is not the

> amateur radio licenses in order to regulate US amateur radio?

I can sell beef and be a vegetarian. You aren't an FCC commissioner or
on the FCC staff and don't regulate amateur or any other radio. You
aren't even a participant in amateur radio.

> Why are you jumping in on a thread Barking Orders? Aren't
> you retired from government service? Do you need some
> pet whipping boys or something? Sorry Herr Oberst, I won't
> be your bondage victim. No one should. Now be a good

>
> Wow, this amateur radio activity is sure tough as a hobby!

What's your hold up in getting your license, Leonard H.? You've been
shedding skin cells on this planet for seven decades. What is it you
are waiting for? It may be tough for you to swallow but until you go
ahead and take the plunge, you are an onlooker, a bystander, a sidewalk
superintendant, and SWL, a wannabe. If you had any serious interest in
obtaining an amateur license, you could have had it in the several years
you've wasted blathering here. Study material is available.

Good luck with that 5 wpm!

Truth? You've boasted that nothing you post here can be taken seriously! Logic? When you change the conditions, call any statement made by your opponent irrelevant and make the definitions? The American Way of Life? Maybe some Texas rustic Libertarian variant...

>Gosh, I thought all these public messages were public.
>Seems to me that anyone can "jump in" on public
>postings. Guess that isn't "supposed" to happen in
>the good Oberst's orderly little world

Nor in yours, Lennie the Undecided. YOU have chastised ME for having the temerity to comment on your "comments" to third parties as if I had tapped your private e mail.

Of course, I expect no less from you.

>Ah, so the Oberst Gives Orders on what is acceptible for
>posting and what is not acceptible.

Gee...I WONDER from whom he got THAT idea...???

>Quit acting like some bad stereotypical Oberst.

Ahhh...but LENNIE! Why should YOU be the only one to have some play-fun time?

>This is not the
>Waffen SS. You try but cannot cow anyone with all the Orders,
>cowboy.

What's WITH you and the NEED to assert that anything stated contrary to The Word of Lennie MUST be Nazi? In this post and others you have been riding Dave with the same neo-Nazi crap that you pummeled ME with?

Of course, you have since denied DOING those things, yet here you are, once again, caught in ANOTHER lie. But don't worry, we weren't surprised.

>This is not a playground to act out your control-freak fantasies.
>I know that is disturbing news to you but try to accept it.

You should read what you write, Lennie. Seems YOU are the one with the comprehension problems here.

>Does the FCC require Commissioners or FCC Staff to have
>amateur radio licenses in order to regulate US amateur radio?

So you perceive that since YOU don't have a license you have the RIGHT to be foul, lying and obnoxious?

>Sorry Herr Oberst, I won't be your bondage victim.

As much as I am sure that disappoints him, Dave...(Mind's eye view of Lennie in leather with rubber ball in his mouth, tied to the ottoman...Mrs. A in Pointed black leather bra and nazi officers cap with cat-o-nine...Lennie crying for more as she drags lashes accross his butt.....)

>Now be a good
>sort and put away the leather, whips, and chains...you are
>starting to look very foolish.

Having been disarmed of another rant, YOU are the one looking foolish, Lennie.....

Again, I might add........

>Everyone has to
>Obey You, right? Right, only You "know what is best" and
>all others should shut up.

I am sure you'd LOVE for people to allow you to run rampant, spewing your hate and sludge without impedement. Sorry. Won't happen.

>Wow, this amateur radio activity is sure tough as a hobby!

THIS isn't Amatuer Radio.

YOU will NEVER know Amatuer Radio. You can talk about it...you can criticize it...you can dream about it...but it will always elude you.

Because YOU, Lennie the Liar, just can't HANDLE it!

I find it amusing that this was posted at 9:11...mostly because all of Lennie's stuff is in dire need of assistance...like some TRUTH.

>I guess all that stuff about the Tennessee STATE Guard is
>"not accurate.

There are some CURRENT changes that are NOT reflected on the Web Page, Lennie...which only PROVES my assertion that you CANNOT take what you read on ANY web page as verbatim fact.

>>You ASSUME the webpage contains all the information that is
>"essential".

>You betcha.

And proof positive that you assume the worst...the worst since you think this stuff is essential or even current.

>You seem to be claiming some webpage is "inaccurate" just
>because a newsgroup opponent presented it...while anything
>Robeson presents via webpage is absolutely truthful.

No...it's inaccurate because it's neither timely nor is it necessarily complete.

You assume it is both and present it as absolute fact.

An engineer should know better. But then, it is YOU we are talking about.....

>This is getting to be in the area of Oberst Heil's "definitions"
>where he and only he defines the "truth" in messaging.

Nope...just once again laying your rants to waste.

Most overseas military installations, even the largest ones, >have no MARS operation in place. Of those which do, most have a >difficult time staffing those facilities.

Agreed on the staffing, Dwight, but not the rest.

In most cases, the mission of MARS has shifted significantly. In the case of Air Force MARS, it is no longer centralized around H&W traffic, but in supporting various installations with "Base Support Teams", groups of Amatuers who can help with ancilliary communications ON the facility.

That, obviously, is almost impossible to do on an overseas facility.

> If you live near a military installation, consider conducting classes, >and exam sessions, targeted towards military personnel. Make sure to >introduce MARS during those classes. Offering classes to military >ROTC programs is also a good idea.

Excellent ideas.

Another program being used by NAVMARCORPS MARS and AFMARS is to incorporate the activities of the USCGAUX and the Civil Air Patrol. Army MARS is being used by various State's Guards and Defense Forces.....contrary to what Lennie might tell you......

>>who agree with me.
>
>There are many in here who rationalize about all newcomers
>having to do just like they did.

Who? Not me. My point was that it's not one of MY reasons.

Show me where I've posted "I did it, so you must do it too" as a reason for
keeping code tests. The only place I've seen it is in the posts of nocodetest
folks who claim to know the motivations of others.

> In another post you seemed to
>want all newcomer to do Much More than you had to do...

That's YOUR misinterpretation. Show me where I wrote that American hams should
have to do what used to be required of Soviet amateurs.

And by the way, I did all of those things. And I can still do them. Not only
did I design and build my current HF ham station, and many of its predecesors,
I can explain its operation in detail. And it wasn't a copy of any published
design.

>Which is it?

Read my posts and set your biases aside, Len.

The over-reaching imagination here is yours. Not mine.

>>I think my PA driver's license allows me to operate vehicles up to 10,000
>>pouinds GVWR. Beyond that, I need a CDL.(Weight is not the only criteria, of
>>course, but it is one of them). What happens at 10,000 pounds that suddenly
>>makes me unsafe to drive? Why am I safe for 9,500 but unsafe for 10,500?
>>
>>> No such similararity
>>>exists regarding the privileges between tech/gen/extra.
>>
>>Sure it does. Listen to the HF ham bands and see how much Morse you hear.
>
>Why not listen to ham bands above 10 m? Tell us how
>much morse code you hear there.

Morse is used far more on the HF and MF ham bands than on VHF and UHF.
>
>Commercial Driver Licenses are COMMERCIAL.

In the context of driver's licenses, the word does not mean "for money". To
legally drive a motor vehicle over 10,000 pounds GVWR in PA requires a CDL,
even if I drive it as an "amateur". But I can be paid to drive my car without
one.

>US amateur
>radio is defined as "a radio activity not having pecuniary
>interests." That's "amateur" in any definition.

Driving many vehicles "without pecuniary interest" still requires a CDL,
though.

>
>Do you want all amateurs to become commercial operators?

I want them to have the basic skills and knowledge of the amateur radio
service.
>
>>>Indeed,
>>>the lowest license (Tech) can build and play with the highest power

Where do you see that? Show me where I advocate excluding anyone who has the
necessary qualifications.
>
>By keeping the morse code test for HF privileges, it insures
>that SOME newcomers will know morse (your favorite mode).

So? Is that a bad thing?

>It also insures that many newcomers will not accept or
>bother with HF-privilege class license testing, thereby insuring
>a minimum of operators.

How does it do that?

>Exclusivity.

Qualification.

> All for a "better" IN-
>group...to your personal liking.

To my judgement.
>
>Seems a pretty clear thing to me, old-timer.

Nope. You're projecting your biases onto others.

> It's not an
>"environmental" or "resource" thing at all..

Sure it is. Morse signals use less spectrum than voice signals.

>.just another
>manifestation of "that's the way you had to test and therefore
>every newcomer has to test the same way."
>
In your imagination, maybe. Not in fact.

I tested in front of the FCC. I didn't advocate going back to that because it's both inconvenient and impractical. I took 13 wpm to get a General, and the General written was one element. I didn't advocate that, either.

>Rationalize all you want.

I'm just telling it like it is. Why does that bother you so much?

> Keep on insuring that US amateur
>radio turns into the "US Amateur Radiotelegraphy Service"
>to keep the 1930s alive and well in a living radio museum

Simple:

If I use Morse, I use far less spectrum than any voice mode. That leaves lots more room for other hams.

If I use Morse, I can run far less power and still have the same S/N ratio at the receiving end. Less QRM for other hams.

Those are good things.

Agreed! I'll go with this definition:

"A 'radio outlaw' is anyone who operates a radio transmitter not authorized by
a specific or blanket rule authorization."

Always better to be accurate.

>>Specifically, the activities of "freebanders", and cbers who
>>violate FCC regs are examples of "radio outlaws".

Dave Heil wrote:
> There are enough holes in it to fly a 747 through.

Let's reduce the scope to keep it simple. Exactly where are the holes
in the following?

Premise:
All HF hams are required by circumstances to pass a Morse code exam.

From Webster's: "forced - required by circumstances".

Conclusion:
All HF hams are forced to pass a Morse code exam.

Please show me the holes in the above (and only the above) without muddying
the waters by resorting to diversionary tactics. I'm not going to respond
to any of your diversions. I will respond to any holes you find in the
above premise/conclusion.

> I gave you a fairly lengthy list of items, all of which you described as

> newspaper. But to you they all were. It is apparent that you do not
> believe in free will or choices open to man.

The reason you are unable to change your mind in the face of overwhelming
evidence is that you are predestined to have a closed mind that believes in
free will.

I agree that those are good things but one single ham choosing one single
mode is not a BIG effect on the other 600,000 hams. I've never heard you
on any mode so it has had absolutely no effect on me.

Methinks you should change your statement from "my use of CW has a BIG
effect ..." to "thousands of ham's using CW has a BIG effect ..."

I am not accepting your view, Dave. Just because I and a few others are exceptions to the rule does not change the fact that MOST HF hams are required by circumstances to learn Morse code. I never said that ALL HF hams are required by circumstances to learn Morse code. I've said that most or the majority of HF hams are required by circumstances to learn Morse code. However, ALL HF hams are required by circumstances to pass a Morse code exam. Since you keep diverting away from that statement, you must believe it to be true.

> I take this as pretty much of an admission that your view of "forced
> learning of morse" are a Texas tall tale.

You take wrong. If they don't already know Morse code, HF hams are required by circumstances to learn Morse code. That there are a few people who already know Morse code is irrelevant.

On another thread, I presented a premise and a conclusion for you to use to indicate holes in my argument. Let's focus our discussion into one branch of a thread for obvious reasons. You can have the last word in all the threads except the premise/conclusion thread.

So you agree with my above position?

The sheer number of parallel threads have gotten out of hand. I am
starting a new thread entitled "Forced code exams?". You can have
the last word on the multitudes of "Pride" threads.

To simplify things, here is a premise and a conclusion. Please point
out any holes in it.

Premise: All HF hams are required by circumstances to pass a Morse
code exam.

Quote from Webster's: "forced - required by circumstances"

Conclusion: All HF hams are forced to pass a Morse code exam.

Please don't continue to muddy the waters with your plethora of
diversionary tactics.

Read my lips, Dave. I have not come around to your way of thinking. A few HF hams were not forced to learn Morse code because they already knew it. MOST HF hams are indeed required by circumstances to learn Morse code. Please switch to the "Forced code exams?" thread.

> If a guy sez, "Ham radio still requires passage of a morse code exam.
> I'm not going to learn any stinking morse code", that is his choice.

That's true, Dave, but irrelevant. That guy is not an HF ham so my statement doesn't apply to him. HF hams who didn't already know Morse code were required by circumstances to learn Morse code. The reason that the above guy was not forced by circumstances to learn Morse code is that he is not an HF ham. Please switch to the "Forced code exams?" thread.

Which way is it now? Let's see--you were not required by circumstances to learn morse in the cub scouts but you were required to respond to my posts. I think I see a Cecilian pattern emerging. If you and I had options in learning morse code, we were not forced. I had options and you've told me that you have options. It would seem that everyone has options. No one is forced to learn morse code.

> > ...not unless these characters were ordered by a judge to become HF

So averaging the attitudes of the two bank managers yields 50%
difference. Why am I not surprised that the math works? The
FBI certainly wishes there were 50% fewer bank robberies.

No, I didn't and of course you know it, you just can't pass an
opportunity to twist words to suit your intentions.

Personally, I don't think the FCC gives a flying fig WHO gets a ham
license. They simplified the structure because the old 6-tiered
system was difficult to administer and a pain in the arse to enforce.
The FCC's only interests in the ham bands are the efficient
enforcement of existing regulations, modifying existing regulations to
make enforcement easier and more efficient, and to farm out, sell,
rent and other wise create revenue from under utilized portions of the
spectrum that just happen to be allocated to the amateur service on a
secondary (and sometimes primary) basis. The FCC is a governmental
agency charged with regulating the use of the RF spectrum. They have
no interest at all in the status of the Amateur Radio Service.

The ARRL, on the other hand, IS an advocancy (sp?) for the service,
and they certainly DO have some interest in what happens to the hobby.
I can assure you, as a member of the ARRL, that I do NOT look forward
to seeing freebanders, pirates, nor anyone else with an "outlaw"
attitude joining the hobby in ANY capacity. This is not official
dogma from the ARRL, just the opinion of ONE member...

Jim:

If you have an ordinary (Class D) driver's license, you are authorized to operate vehicles up to 26,000 lbs. GVW and carrying up to 15 passengers (yourself, the driver, included in the count). To carry the 16th passenger, you would require at least a Class C CDL with passenger endorsement; to carry the 26,001 st. pound, a Class B CDL would be required. Of course, PA requirements may vary; but I think CDL's are supposed to be uniform in requirements throughout the 50 states.

And why should anyone take it seriously anyway?
There is NO score attached to anyone's license. You pass
with a perfect score and you pass with just a 75% score
and no one ever has the details as part of the license
then issued.

The rubber meets the rode in what and how each person
does with the license granted.

Cheers,
Bill K2UNK

Very true, but I do remember several Notices over the years
that dealt with the desire of the FCC to persuade violators
whose only crime was lack of license to "straighten up and fly
right" and get licensed.

The analogy was always made to someone who drives a car without
a license. We always lived in fear of some judge remarking to
a "pirate" whom we would catch and finally drag into court:
"OK, you operated a radio transmitter without a required
license. I sentence you to obey the law and get a license...."

Fortunately it never happened - the judges were more "with
the program" than most of the big-city Federal prosecutors of
that era.

We did have one case where a "big bad CBer" that we caught saw
the light and studied and took the test for his ham license.
His application came up for hearing before issuance, and he
claimed (rightfully) that since the time he was caught he
didn't commit any more violations. He got a one-year
probationary period on his license, and he turned out to be one
of the most responsible hams in the community.

The door can swing two ways.

the
>setup I use now.

I am familiar with FCC radio operator test requirements. None
have required "bulding any equipment as test proof" for any
radio operator license in the last half century...

You are trying to equate a personal situation with something
not required in the USA. Bad equation. Bad, bad, sit in a
corner...

>I DON'T ask others to do what I haven't done.

OK. Keep that sentence in mind... :-)

>Nope. Why do you think that?

Because you mentioned an old test in a foreign country,
tried a faulty equation to justify mentioning it...

>Is building one's own radio gear a bad thing?

No. Why don't you broach the VEC QPC on making such
an amateur radio test condition? Otherwise, why post a
condition of past testing that isn't applicable today?
Especially so in a case of treason against the USA?

>
>We KNOW, Len. Is the FCC infallible in its regulatory decisions?

To nearly every PCTA prior to 99-412 the FCC was absolutely
infallible in having the three-speed morse tier tied in with the
"incentive licensing plan." :-)

>Doesn't mean they are infallible.

If the FCC requires a code exam for a license they are
"infallible" according to the PCTA premise. Is that
premise "infallible?" :-)

>>The FCC doesn't require Commissioners or FCC Staff to
>>hold amateur radio licenses in order to regulate US amateur
>>radio.
>
>So? What's your point?

Somehow I just knew you were going to come up with "you
know what is best for [US] ham radio." :-)

You are licensed as a US radio amateur, at the "highest"
class...ergo, "you know what is best" and no one else
with a "lower" class (and certainly not anyone not having
a US amateur radio license) can "know what is best." :-)

>>There are many in here who rationalize about all newcomers
>>having to do just like they did.
>
>Who? Not me. My point was that it's not one of MY reasons.

My apologies...but be careful what you write in the future,
such may come along to haunt you later.

>Show me where I've posted "I did it, so you must do it too" as a reason for
>keeping code tests. The only place I've seen it is in the posts of nocodetest
>folks who claim to know the motivations of others.

The "only" place?!? Look at all the "real ham" mentions...
"real hams" know/tested-for morse code. For an
extreme, see the idiotic postings that go only
"Know code = know ham No code = no ham."

Do you need that sign illuminated to see it?

>>>Sure it does. Listen to the HF ham bands and see how much Morse you hear.
>>
>>Why not listen to ham bands above 10 m? Tell us how
>>much morse code you hear there.
>
>Morse is used far more on the HF and MF ham bands than on VHF and UHF.

Oh? Why is that? :-)

>In the context of driver's licenses, the word does not mean "for money". To
>legally drive a motor vehicle over 10,000 pounds GVWR in PA requires a CDL,
>even if I drive it as an "amateur". But I can be paid to drive my car without
>one.

How about leaving US civil radio regulation to the FCC and
driving licensing up to the individual states? I still can't see
any similarity between the two.

>>Do you want all amateurs to become commercial operators?
>
>I want them to have the basic skills and knowledge of the amateur radio
>service.

Then the "fallible" FCC gave that power to the VECs as part of
99-412. The VEC Question Pool Committee can decide "the
basic skills and knowledge of amateur radio" through selection
of the appropriate questions. The VECs are composed of
licensed US radio amateurs. If you want to comment on that,
please address the VEC QPC, not me.

>>Seems to me that was the PCTA position before the 98-143
>>NPRM.
>
>Not me. I suggested many chnages to the FCC. You didn't even bother to file
>comments, Len - just "reply comments".

Ah, so 14 pages of text single-spaced (wrong format) was "not
bothering?" Insignificant?

There's over 2600 documents in the NPRM 98-143 public file.
Perhaps you could go through all of them and note which ones
are "significant" or "insignificant."

>>By keeping the morse code test for HF privileges, it insures
>>that SOME newcomers will know morse (your favorite mode).
>
>So? Is that a bad thing?

Yes, to newcomers. The FCC has gone on public record in
1990 and again in 1999 that it does not consider a morse
code test to be relevant to its task of determining who should
or should not get an amateur radio license. It must continue
to do so for external factors, namely ITU-R S25.5.

>>Seems a pretty clear thing to me, old-timer.
>
>Nope. You're projecting your biases onto others.

You can project your biases freely but others cannot? :-)

>I recall that way back on January 19, 2000, you told us you were going for an
>Extra "right out of the box". Hasn't happened yet, though. Guess those new
>writtens are too tough, huh?

Heh, I don't recall that. What I recall saying is that I *MIGHT* do
that. I don't recall any promise no guarantee to do that.

Since 13 months ago, I've seen no lessening of the "superior"
attitude of many already-licensed individuals who depreciate,
denigrate, and insult those not having amateur radio licenses.
Why should any professional bother with testing for a hobby
where the existing hobbyists have such a "superior" attitude?

I don't consider the US amateur radio written test elements
"too tough." I have them on file, have done practice tests.
The point is WHY BOTHER to seek self-glory in title, rank,
status, something that far too many display to others?

Amateur radio is a hobby, not a profession, not a (non-
regulatory term) service to anyone but the licensee.
Amateur radio activities radiate RF, hence such activities
need regulation. As part of that regulation, the regulatory
agency issues licenses. The viewpoint of many who turn
down amateur radio is that too many within the hobby
make far more of their license than the activities...they
make themselves far more than they really are...and they
seem to spend an inordinate amount of time defending
their position due to delusions of self-grandeur.

I have no quarrel with the "writtens" for any class of
license. I've faced far, far worse "exams" in my career

and "passed" all of them...including an FCC-given First Class Radiotelephone license test that so many denigrate and dismiss as "nothing" or "irrelevant."

Why should anyone enter a hobby where they are abused verbally by self-professed "experts" in amateur radio?

>I've already accepted that and I've been living with it. I'm still
>looking for the explosion in growth. According to some, many of the
>newcomers will be professionals who will dazzle us with technological
>advances. I'm waiting for that too.

The "explosion in growth" already happened, but some are deaf
to plosive conditions. US amateur radio licensees are now a
third of all US amateur licensees, exclusive of the Tech-Plus
"transfers." To have the total licensees grow by 50 percent in
only 11 years sounds like growth to anyone reasonable.

Who insisted that there "must" be an explosion in growth?
Seems like that was the PCTAs who were looking for any
excuse to denigrate anyone not taking a code test. Such
denigration was common in this newsgroup about the FCC
98-143 NPRM. It is still continuing long after the FCC 99-
412 Report and Order.

It must be that no-code-test Technicians aren't "real hams"
and therefore they "cannot be counted," hence there is "no"
explosion in growth.

As to "professionals advancing the state of the art," there
are plenty of examples in QST, QEX, even a few in 73 and
CQ magazines. G3PLX's innovative PSK31 (lots of good
thinking on devising that) is a shining example, but of
course Peter is a Brit and probably doesn't count? It isn't
about morse code so it shouldn't count?

Of course you will discount this entire message since it
was written by someone not licensed in amateur radio.
:-)

In all other services where manual Morse is permitted,
operators using that mode must hold commercial Radiotelegraph
Operators' licenses (20 wpm text, 16 wpm code groups minimum).

Ham radio IS different.

As much as I'd like to take credit for it, Cecil, you were the one who first introduced me to the idea. And I agree. I had to force myself to learn code instead of watch TV or talk on the radio. Do you now disagree with the first definition you used?

The law was amended that if the info that is passed results in
the death of someone who is exposed as a double agent, he is
liable for the death penalty. Apparently two such doubles were
executed by Russia, so that liabiulity does exist in this case.

>See another treasonous son of a bitch still

I think the question is irrelevant, because whether a person even wants
to get on the radio is irrelevant at test time. No one is asking what
somebody intends to do with their license. The only question being
asked is whether they meet the qualifications for licensure.

You will now state your views about the qualification requirements.

You know, you're right. They're just trying to be efficient by robbing the bank. I saves them from having to steal a burger from Macdonald's, and then having to steal a Pepto-Bismol from the drug store.

It's different in that we are licensed generally according to frequency restrictions, rather than by mode restrictions. The license requirements are based however on, among other things, the modes we can use.

I think so. One of his definitions said somthing about "requires
effort". It required effort to learn code. I have to force the chair
away from my desk if I want to get up, etc, etc,.

Wouldn't this mean that taking written FCC exams is also NOT a voluntary act, and therefore there's no difference between the Morse test and the written test in this regard?

No, it's because the foreign QSL cards now cost so much. In order to get a QSL card from Germany, I've got to put 80 cents worth of postage on the envelope and 2 dollars inside. $2.80 for one QSL card. Yeah, I know a radio costs a thousand bucks, blah blah blah. Still, 2-3 dollars for each QSL card that I want from a DX station gets expensive. And these days, 90% of these guys have email!

Is element 4 the Extra question pool? If so, your statement is not
entirely correct. It should read: Amateur radio users of 7.010 MHz
were required by circumstances (forced) to pass an Extra exam.

Actually, El Paso is on MST. We are in the CST zone in East Texas
so it will be 9:30pm for me. I have made schedules before where
the guy showed up at the correct Zulu time but not on the correct
Zulu day. Just wanted to be sure.

Well, that's what matters after all. :-)

I'm going to take the tax refund to Vegas. Been winning roulette on the computer long enough. I'll be betting that I can avoid those 4 sigma events long enough to get out of town with some cash. If not, it'll be fun while it lasts. I showed the system to my dad (he's a blackjack player) and he was pretty impressed with how much he could win on the computer. I can't think of the name of the program now - it's one of those casino games you can buy. Looks just like the video games in Vegas.

Amateur radio users of 7.010 MHz are HF hams, are they not? The point I
make is correct nevertheless. Thank you for making the statement more
accurately than I.

The point in making that statement is to illustrate that singling out
Morse code in this debate is silly. If it's true that hams are forced
to learn code, then by extension of the same logic they are likewise
forced to learn the rest of the material that fulfills the
requirements.

Be kinda silly for a federal agency to write a rule prohibiting someone from doing something they were unable to do, doncha think? Their purpose for creating the Tech license was to allow people to get on the bands without having to learn, or operate, code.

Well, that *was* your argument. I haven't argued that someone forces
himself to learn. You said you forced yourself to learn. I've argued
that *circumstances* require hams to learn (or already know).

Yes, but not all HF hams are allowed on 7.010 MHz. Only the HF hams
authorized to operate on 7.010 MHz were required by circumstances
to pass an Extra exam. One has to be accurate about such matters.

Cecil:

That's obviously the pot calling the kettle black. You can't comprehend the fact that no radio amateurs are "forced" to take Morse code (or any other) exams. They do so on a purely voluntary basis. End of story.

They can very easily be replaced by intelligent, educated,
cultured, and dignified people willing to do the job as well or
better than it is being done now. Anyway, as usual, it is
just a small minority of all truckers who give the rest of the
lot a poor image. Those who don't fit the negative stereotype
should exert some influence to clean up the overall image
of truck drivers.

These days, truck driving is a complicated, demanding
business which requires more out of the individual than just
the ability to sit behind the wheel for extended periods of
time. Here in Delaware, we've recently had a spate of
fatal accidents involving truck drivers who were obviously
operating outside the limits of ICC regulations and common
sense. I blame it on the fact that the drivers involved were
not intelligent enough to recognize the importance of
operating within their limits, and exceeded them in the
interest of making themselves look good among their
peers and superiors, giving no thought to the consequences.
This is pure ignorance born of low intelligence. Not all
truckers are like that, but unfortunately, enough are to
cause grave concern among the motoring public.

>HF hams are forced to pass a Morse code exam.

Cecil:

Well, that may be comforting to you, but here's the monkey
wrench in the works: I'm an "HF ham," and nobody "forced" me
to do a damn thing! I met the licensing requirements purely as
a volunteer! It was my choice, my decision, my effort involved.
Nobody else influenced me, cajoled me, and certainly, nothing
I would define as "force" was applied at any time. Therefore, I
must logically conclude that the definition of force, i.e. "required
by circumstances," is somehow defective.

I would think that the definition "required by circumstances" would
better fit a word such as "inevitable." I would define "forced" as
"motivated by coercive influence or threat of negative consequences."

>statement is just another of your strawmen diversions.

Cecil:

It is only by attempting to enter the ARS that one becomes obliged
to meet the licensing requirements. However, this entry itself is
entirely voluntarily; and the decision to enter the ARS can be
unilaterally rescinded by the prospective ham without any
consequences which would affect his ability to lead a normal,
happy, healthy life. Therefore, he is never "forced" (required by
circumstances) to do anything he doesn't voluntarily agree to do.

>> Produce a person who was forced to learn morse.
>
>If I remember right, Larry was required by circumstances to learn
>Morse code. Please switch the discussion to the premise/conclusion thread.

I may have been "required by circumstances" to learn the Morse code,
but being in those circumstances was entirely my own choice. Therefore,
in spite of the fact that I was, admittedly, "required by circumstances" to
learn the Morse code, I was not at all "forced." I think (methinks?)
your Webster's Unabridged Dictionary may be defective...

> Glad to. Cecil Moore, W6RCecilA.

I was *required by circumstances* to pass two Morse code exams, Larry.
The circumstances were the FCC requirements. All HF hams were *required
by circumstances* to pass a Morse code exam. Only nocode techs and
non-hams were not *required by circumstances* to pass a Morse code exam.
You, as an HF ham, were required by the FCC requirements to pass a Morse
code exam. Otherwise, you wouldn't be an HF ham.

> BTW -- is it pronounced "Seecil" or "Cessil?"

In Texas, it's pronounced "SEE'sul". In Japan, it's pronounced "SEE'saw".
The native Japanese don't handle 'L's very well.

Yes you did, Larry. Read it again. You confessed to being an HF ham
who used his free will to decide NOT to take a Morse code exam. Being
on HF ham bands without taking a Morse code exam is a crime. Therefore,
you are a confessed criminal.

> entirely voluntarily;

The attempt is voluntary, Larry, but the entry is not. All HF hams
are required by circumstances (existing at the FCC) to pass a Morse
code exam. What is it about "required" that you don't understand?

Requirements are not voluntary. Requirements MUST be met. Voluntary
implies a choice. HF hams have no choice when it comes to passing a
Morse code exam. HF hams cannot volunteer NOT to meet the Morse code
requirements. Only non-HF hams and non-hams can volunteer NOT to
meet the Morse code requirements. HF hams have absolutely no choice.
Please tell me the name of just one HF ham who volunteered NOT to
pass a Morse code exam.

> Therefore, he is never "forced" (required by
> circumstances) to do anything he doesn't voluntarily agree to do.

If that is true, there has to exist some HF hams who weren't required
by circumstances (existing at the FCC) to pass a Morse code exam.
Where are those guys, Larry? I don't know of any. HF hams who
volunteered NOT to take a Morse code exam are criminals.

> I may have been "required by circumstances" to learn the Morse code,

Thanks, Larry. "Required by circumstances" is the Webster's definition
of "forced". You have earlier said that your Morse code skill was
"produced with effort". That's another Webster's definition of "forced".
That one is in your cheap dictionary.

You have already admitted that you were *required by circumstances*
(FCC regulations) to take a Morse code exam. "Required by circumstances"
is the Webster's definition of "forced". You previously admitted that
your Morse code skill was *produced with effort*. "Produced with effort"
is another definition of "forced". You as much as admitted that you had
to *force* yourself to learn Morse code.

> I met the licensing requirements purely as a volunteer!

As an HF ham, could you have volunteered NOT to take the Morse code
exam? Nope, you couldn't, Larry. Nocode techs and non-hams are the
only ones who can volunteer NOT to take the Morse code exam. Sorry,
but HF hams have no choice except to yield to the conditions required
by circumstances (FCC regulations).

> Therefore, I
> must logically conclude that the definition of force, i.e. "required
> by circumstances," is somehow defective.

Then your argument is not with me, it is with the Webster's dictionary.
Please take it up with Barnes & Noble.

> I would define "forced" as
> "motivated by coercive influence or threat of negative consequences."

That's one definition of "forced" but certainly not the only one. English
words often have multiple definitions all of which are valid.

You can say, "I was not motivated by threat of negative consequences
when I became a ham".

I can say, "You were required by circumstances to pass a Morse code
exam".

Both statement can be true because of the different definitions of
"forced".

I have graphically diagrammed my argument using symbolic logic and
the rules of classical logic. There is nothing wrong with it.

Please produce just one HF ham who used his free will NOT to take
a Morse code exam, Larry. That's the only way you can prove that
you are right.

>Telephones, cable service, airlines and the like have been deregulated

Personally, I'm satisfied with my telephone and cable service. They're far from
perfect, but in all honesty I can say that they're better than they were five
and ten years ago. As for airlines, I can't comment, since I haven't flown
anywhere for about 15 years.

>for some time. Prices continue to go up; service goes down. As far as
>amateur radio, I've noted a number of newer ops, mostly using voice

No one has ever made such a statement that ham radio would have an "explosion in growth" with professionals and technical types. This is your distortion of the facts. But I suppose if there was such an "explosion" they wouldn't count because they didn't pass the "real" code test.

Well put Mark,

I see nothing wrong with a friendly e-mail to your particular area(division) representative(director) to inquire about their position re. 11 meters. Should they respond that there is no ARRL position; Politely refer them to RM-9807 and let them know that this is considered by many 11 meter interests to have been league involvement in an issue for which they claim to have "no position." This is no longer acceptable and they now have another aspect of "league involvment" to consider for your vote.

I do NOT, however, agree with trying to get the ARRL to lobby the FCC on behalf of 11 meter interests, merely NOT to involve themselves in 11 meter rule making proposals by and of legal 11 meter interest groups/individuals.

Other than that, good luck and BRAVO on a "heads up" call.

Dwight, Dwight, Dwight...,

I have to go easy on you because you were a coastie...well, sort of anyway. This'll get flamed something terrible by the "Dick & Dwight Comedy Show" but here we go.

>There is no animosity towards CB'ers. Instead, there is animosity >towards what some in the CB community do (and, yes, those people are >very much the majority).

You, Dwight are as wrong as two left feet! Yes, there IS animosity toward CBer's. Yes, SOME engage in behaviour that is offensive to MOST hams as well as MOST CBer's. NO, NO, NO, Dwight...these people are very much NOT the majority. Your broad generalizations bear out that you have NOT the slightest idea of what you're talking about re. 11 meters. You may cite your 25 years of experience and allude to how you "know of" and have monitored the "whole" band...but your inaccuracy shows that you really haven't got a clue.

>In other words, the resistence in the ham community towards CB'ers is >nothing more than similar efforts in "real" communities to keep the >criminal element out.

In other words, you're an rf bigot.

>We have a nice community and we don't want to see the streets >(frequencies) in that community taken over by criminals (freebanders, >linear freaks, rude operators, or whatever).

In other words, you're an rf bigot.

>Of course, just like in "real" communities, "decent" people are always >welcome (including those from the CB community). However, just like in >"real" communities, that CB'er will not be immediately accepted just >because he expresses an interest in joining this community. Since even >the "decent" CB'er has spent time hanging around bad people, he is >going to viewed with suspicion, and mistrust, until he has proven himself >(has that license, acts like a ham, etc).

M O R E R F B I G O T R Y ! ! !, but at least you threw in:

>"decent" people are always welcome (including those from the CB >community).

.....but felt it necessary to qualify it with.....

>Since even the "decent" CB'er has spent time hanging around bad >people, he is going to viewed with suspicion, and mistrust, until he has >proven himself (has that license, acts like a ham, etc).

Yeah and some of my best friends are CBer's...yada, yada, yada...! I've gotta tell you though, you two make a good tag team! Your neat little explanation of the "imagined" animosity and your "expert" knowledge on the behavioural habits of the "general" CB populace may fly with those who want to believe that. But to those who have "been there and done that," your know-it-all claims are as transparant as saran wrap.

Naw, just wait 3 months, and you'll get 15 cards from Germany in
your "Buro" envelope, 34cents for the whole stack. You're just too
eager to spend money.

And it takes too damn long and Germany is an easy one to work. The hard ones
WANT DEMAND more. The whole thing is a racket. EQsl Must and soon WILL
exist. If ARRL does not do it soon some will and start independent awards
that will destroy the ARRL monopoly. Yes the Dxers will have to find another
way to make money, BUT , they will save a LOT by not printing cards.

On the contrary, the FCC welcomes comment from any citizen
on FCC regulations for any radio service, does not exclude
anyone. They say so in their "FCC Manual." Check it out...free
download on the Internet or pay a small fee to the US GPO for a
printed copy.

Ahem...you might want to amend one word in the "advice."

Once a pugnacious drunk wandered into a gay bar and
announced "I can lick anyone in the house!" You can
guess the rest... :-)

Do I need a Charles Atlas course? In Internet terms I am
8' 4" and 560 pounds with 3% body fat and can bench-
press a Schwarzenegger. Almost as strong as others
claim they are. :-)

Please let it be without music...no violins. :-)

Meanwhile, back to accepted amateur radio policy
subjects like Commercial Drivers Licenses, politics,
drugs, firearms, and espionage...all approved by
amateurs for amateur radio policy discussion. :-)

Glaucoma seldom results in "coke bottle" eyeglasses. Glaucoma
is an increase in internal eye pressure resulting in eventual
retinal damage. While there is some defocussing of the lens, it
is not to the extent of needing extreme correction via "coke
bottle" glasses. Usual correction procedure is a topical liquid
medication to reduce internal eye pressure. That is what I have.

There are no symptoms of the onset of glaucoma. A simple
painless pressure check will determine it. No check may
result in advanced glaucoma that can result in blindness.

With the morass that CB becams, spawning the "freeband" movement that
has continuously boten more and more brazen as time advances, you don't
see any reason for FCC to wish that most of them would give it up in
favor of a easy ham license? It's only logical and certainly an easy way
out of difficult enforcement headaches. Or wishful thinking.

They simplified the structure because the old 6-tiered
> system was difficult to administer and a pain in the arse to enforce.
> The FCC's only interests in the ham bands are the efficient
> enforcement of existing regulations, modifying existing regulations to
> make enforcement easier and more efficient,

Anything to make life as an FCC staffer more accomodating in the face of
a recaltricant congress...and after while thiniking more of those issues
instead of focusing on the work at hand naturally causes that work to
suffer from neglect.

and to farm out, sell,
> rent and other wise create revenue from under utilized portions of the

Naw, it has been made pretty clear by them that anything they can do to
eliminate need for direct oversight of the ARS is beneficial to them and
likely to becomne fact. Regardless of the possibility, even liklihood,
of negative effects resulting.

That is an example of construction-assembly ability and
would pose an inordinate burden on the VECs, both for
time and capital equipment for testing.

All the PCTAs have posted that the US amateur radio license
is for an OPERATOR so no assembly or construction skills
are needed. :-)

Larry,

Thanks for the info! Looks like I can drive more vehicles than I thought.

So I'll rephrase my rhetorical question: What happens at 26,000 pounds that suddenly makes me unsafe to drive? Why am I safe for 26,000 but unsafe for 26,001? Why am I qualified to carry 15 passengers but not 16?

Answer: Because the DMV had to set the dividing line somewhere.

Bottom line: You have totally trivialized the term "forced" into
something much less 'forceful', indeed very ordinary. You have made it
the exact equal of "required". In so doing, you have lost the entire
impetus of your argument.

TL, you're sshowing yourself to be more and more lacking in your
ability to see what's there. There is a fair sized segment of
freebanders who now hold ham licenses but continue to do their nefarous
deeds outside the bands. If you don't acknowledge that don't assume we
will automatically presume you aren't familiar with it. Possibly very
familiar.

Now this is novel. A ham who insists that radio operators should follow
the regulations, get licensed and operate legally are condemned as
"bigots". Not too susrprising, considering the source.

You sound just like some radial zealots who insist that decrying the
rampant illegality by members of some minority groups is 'bigotry'. Same
lame claim.

I flew an airplane when I was 12. But I guess they weren't talking about
me. I was able to fly it.

Just glad I didn't have to land it. :-)

You're acting like he insulted your mother or something. What's so bad
about saying that learning code requires a trivial effort? I think that's a
good thing. Though Cecil is now pretending he didn't say that.

Cecil:

I can't because there aren't any. That is not an issue with me. The
issue at hand is whether or not anyone was actually "forced" to take
a Morse code test in order to gain HF amateur radio privileges. I
contend that they were not. You contend that they were. Prove to
me that you're right -- you have NOT done that yet.

Now, Dick. You just ain't giving them the respect their neat hardware deserves. Kind of like the kids with the Tommy shirts, the latest Air Jordan shoes, the Nike hat on backwards and little wisps of what looks like pubic hair on the chin. I'm cool man, why don't you think I'm cool. See my Chevy Blazer -- cool man. It is all a status game and us nasty old hams don't give them status for all that money they spent. Bigot, man, bigot.

My own experience is that a lot of freebanders, almost universally the sidebanders, make pretty good amateurs. Guess it depends on whether a convict who does his time is entitled to a pardon -- or whether you are a good Baptist and believe in deathbed conversions. :-)

If they "continue to do their defarous? deeds outside the (ham) bands"
then nothing has changed. Why should what continues to happen "outside
the (ham) bands" be of concern to or have an effect on hams? Seems to
me, the real problem for hams is when those guys, for instance, use AM/SSB
in the CW/digital portion of the 10m ham band. Then they are violating
the conditions of their ham license and having an effect on hams.

:-) Yep, and the point is that "voluntarily" doesn't matter. U.S.
HF hams are required by circumstances to pass a Morse code exam.
Whether it is voluntary or involuntary is irrelevant. 100% of U.S.
HF hams who don't voluntarily take the Morse code exam are *required
by circumstances* to take it involuntarily.

Yep, that's true. All U.S. hams are required by circumstances to pass
a written ham exam. U.S. hams who don't voluntarily take the exams
are required by circumstances to take them involuntarily. Whether
the exam is taken voluntarily or involuntarily is irrelevant to the
FCC. Either way, it is required by circumstances.

Since it is not a life and death situation, I don't see any reason why
nocode techs shouldn't use the only CW-only frequencies in US amateur
radio for the purpose of learning Morse code.

Right. But the fact remains that the test requirements are based at
least in part, on the privileges afforded to radio amateurs. There is
no presupposition that everything must be covered in element 2.

I looked over how the FCC has changed the license requirements in the last 30 years. And taking a broad view of the problems the FCC faces in enforcing the rules on unlicensed stations.
>
>Just what actions by the FCC support your conclusion?
>
Compare the requirements for a US ham license in 1971 and in 2001. Pay particular attention to what was and is required for a license that allows lots of HF/MF privileges on a variety of modes. Also look at the requirements for a full-privileges license. I can post a detailed list, if you want.

Please understand, I'm not saying this was the ONLY reason for the changes - just that it was one of them. And I'm not saying that these changes were all bad, either. I'm just explaining my view of part of the FCC's motivation and thinking on the subject, and how it has changed from the heyday of "incentive licensing" to now.

Maybe. Or maybe you're just kidding about that.

How about posting a log of your last 5 QSOs on 40 CW?

> Never heard you there.

I'm there sometimes. Usually I'm down lower in the band, ragchewing around 7040, BA'ing around 7050 or chasing DX on the low end.

Besides, you probably wouldn't know it was me if you did hear me because of the code speed used.

In general, I agree - just pass the tests and the license is yours. There are,
however, certain notable exceptions, where the prospective licensee has
demonstrated (in the opinion of the FCC) that he/she is not trustworthy of the
license.

> They simplified the structure because the old 6-tiered
>system was difficult to administer and a pain in the arse to enforce.

That's another reason to simplify the license structure (note that I didn't say
that
getting the "freebanders" and the non-commercial cbers to get ham licenses was
the ONLY reason, just that it was a big reason).

But the enforcement issue isn't part of it, I think. FCC enforcement of the ham bands is mostly complaint-driven nowadays.

>The FCC's only interests in the ham bands are the efficient
>enforcement of existing regulations, modifying existing regulations to
>make enforcement easier and more efficient, and to farm out, sell,
>rent and other wise create revenue from under utilized portions of the
>spectrum that just happen to be allocated to the amateur service on a
>secondary (and sometimes primary) basis. The FCC is a governmental
>agency charged with regulating the use of the RF spectrum. They have
>no interest at all in the status of the Amateur Radio Service.

I agree with most of what you're saying - but add into that thought the following: There are an unknown number of "freebanders" and cbers who operate illegally on the air. Some of these operations are a source of interference and complaints to the FCC, who don't have nearly enough resources to adequately enforce the rules against such activity.

It's much easier to enforce the rules on a licensed station than an unlicensed one, if for no reason other than you know who the licensees are, and where they are. So making the ARS more attractive to "freebanders" and non-commercial cbers makes them easier to control. FCC cannot admit that maybe 27 MHz was not the best place to put cb 40+ years ago, and they certainly can't just shut down the service or move it. The "freebanders" don't even limit themselves to the 40 allocated channels, too.

By offering an alternative, the problem is partly solved.
>
>The ARRL, on the other hand, IS an advocancy (sp?) for the service,
>and they certainly DO have some interest in what happens to the hobby.

Agreed! Which is why some folks hate the ARRL so badly.

>I can assure you, as a member of the ARRL, that I do NOT look forward
>to seeing freebanders, pirates, nor anyone else with an "outlaw"
>attitude joining the hobby in ANY capacity. This is not official
>dogma from the ARRL, just the opinion of ONE member...

If they can leave their "addytood" (Philadelphia lingo) behind, they are welcome! But if not, they are big trouble for the ARS. But as you said, the FCC doesn't care all that much. Main thing is that it makes the FCC's life easier, because going after a ham with an addytood problem is easier than going after an unlicensed person with one.

In general, most of the new hams I know don't have addytood problems, regardless of their background. It's only a few who cause problems.

I can copy call letters at 25wpm. It's just ten character words that
I have trouble with. By the time the seventh character rolls by, I've
forgotten the first three characters. Something to do with my short
term memory or lack thereof.

Hello Dwight

>Bert, are you really going to sit there and tell >me that the majority of CB'ers don't use >linears, modified radios, noise toys, "foul" >language, or occasionally get into "cat fights" >with others on the radio?

No Dwight, I'm standing up and telling you.

>I doubt you could find more than a small >percentage of CB'ers who have not done at >least one, or more, of those things on a >relatively routine basis.

Dwight, I HAVE..."been there, done that," and I'm not talking about the illegal things either.(lest I arouse your fetish for zoning in on the illegal aspect) I HAVE operated on 11 meters since 1977...I believe that's one year less than you, but I'd bet the farm that I've "actually operated" there far far more than you have. I do monitor the "freeband" on a regular basis for the reason mentioned earlier...you find pretty darn good sideband operators there and they're pretty interesting to listen too. Don't hear much from you regarding the "Extra" lids on 75m.

>And, I'm sorry, there is no animosity towards >CB'ers.

Don't be sorry. I'll stand by my assertions. I've seen it, heard it, and have tasted it. When it's applied in a general manner "across the board," much like you do...it's no longer about the doing, it's just about who.

>Didn't anyone ever tell you that name
>calling is nothing more than the weapon of choice for the person who has no >true defense of his position?

Uh, Dwight...that wasn't you that called that poor kid a troll just because he posted his reply at the end of the thread...hmmm???!!!

>Bigotry has to do with an extreme
>intolerance to another person's creed, >belief, or opinion. Since crime, or >criminal behavor, is not a creed, belief, or >opinion, it is not bigotry to want to keep the >criminal element out of your community

You dropped your pants here, Pvt. Stewart...give me twenty! The fact that you apply your blanket of guilt to all CBer's and even mention "guilt by association" in one of your replies demonstrates your intolerance to the opinion of even legal CBer's. Geez, Dwight, because even the legal CBer's have operated in close proximity with the "criminals," they to should be treated with suspicion until they demonstrate that they are "good hams." Sounds like you're guilty until proven innocent. You blew that one.

Lastly, let me assure you that although the issues discussed herein are serious in nature...I do mean for our discussion never to get too serious or heavy as

to offend one another. If the term RF bigot offended you, I do offer you my apology. That certainly was not my intent. Also, if it makes you feel any better...I think I know what a Tommy shirt is, but it'd be supposition at best. I think it's the shirt the lads are wearing that are 22 sizes too big...sue me, I saw this in a local mall, crazy.

And you are STILL spouting untruths. You are NOT required by
circumstances to get a ham radio license, whatever the qualifications,
even if there are no requirements to meet.

The
> federal government forces amateur radio operators to meet the
> requirements for an amateur radio operator's license.

But you already said that no government requires you to get that
license. So your ass-ertion is still wrong on its face.

A little touchy are we TL? Wonder what might be behind all that
sensitivity to the merest suggestion that your activities might not be
assumed to be pure as the morning sun, given your attitudes that distill
out as in sympathetic leaning toward a certain cause.
In any event, you'd best brush up on your tort law. Threatening to sue
someone for some imagined slight can get you more action than you
bargained for.

This is true. In reality, all one has to say is, "I didn't write that. Someone must have hacked my account". I was merely speaking from the standpoint of having worked at a newspaper 20 years ago, when an article was published accusing a local high school football coach of recruiting violations. (The town takes it's HS football way too seriously) The article was based on one family's hearsay. This lead to an investigation, state play-off suspensions, firings, fines, and a lawsuit against the paper by the school district.

While the net is different, someone somewhere will eventually test the limits of this medium of free speech. It's just a matter of time.

How? I simply reported the idea and the FCC's actions. Nowhere did I say it was a bad thing - in fact, I repeatedly stated that I wasn't passing judgement on this course of action.

The only possible bad thing I see is those who don't leave their bad habits behind.

>Your clarification indicates pretty good results.
>
I would think most hams would agree on them, too.

>
A poem about something you may have experienced....

He laid her on the table
So white, so clean and bare.
His forehead wet with beads of sweat,
He rubbed her here and there.
He touched her neck and then her breast,
And then, drooling, felt her thigh.
The slit was wet and all was set, He gave a joyous cry.
The hole was wide...he looked inside,
All was dark and murky.
He rubbed his hands, stretched out his arms,

And then.....

he stuffed the turkey!

Exactly, Hans. In fact they probably outnumber all other ham licenses, in all other countries, combined.

But look at the numbers of JA ham stations since 1995. Not a pretty picture.

>
>Not on the 610 they don't. You know, as in the subject of this discussion?

Are you now ordering all discussion to narrow in on a FORM?

Is the discussion to be about the appearance of the FORM, the
typeface used, arrangement of words, fancy scrolling around the
edges, artwork/engraving illustration, background color?

The FCC said openly that it welcomes comment from anyone.
The FCC regulates US amateur radio. Ergo, the FCC chooses
the various license forms. Comments on the FORM are just as
welcome to the FCC as anything else...from anyone...

Problem is, you have suddenly become petty and narrowminded
and wish to control discussion and topics. Talking about "papers"
sounds like the beginning of a bad WW2 movie scene...

A "license" exists as a permission/grant to emit RF in a regulated
manner. The license FORM is a certificate attesting to a
permission/grant but the FORM itself is not the "license." A
licensed amateur might have his/her 610 (or whatever number)
destroyed and such will not affect their legality or permission or
grant from the regulating agency.

Jim:

The dividing line seems pretty logical to me. The CDL general knowledge
test covers topics which are specific to larger, heavier vehicles -- covering
differences in handling, braking, and the nature of the payload (cargo,
passengers). The endorsements require additional knowledge on
special vehicle characteristics such as passenger-carrying, hazardous
material, air brakes, etc. The dividing line seems well geared toward
excluding the type of vehicles which would normally be operated by
non-commercial entities such as automobiles, light truck/trailer
combinations with a GVWR less than 26,000 lbs, and smaller cargo-
carrying vehicles (such as the U-Haul/Ryder/Penske etc. rental moving
vans).

Where would we find "any test for a ham license that the FCC has used for the past 50 years"? I am pretty sure that most of the tests are unavailable and you know it. Who is buying the plane tickets for us to come give you the tests for verification of your claim? I'm betting you are pretty sure we won't, so no worries on that account. And even if you did pass, how would we know that it was "easily" passed? Maybe it was hard for you, but you wouldn't admit it. How could we tell for sure? No Jim, I'd say that you (and the rest of us, especially me...) are pretty safe from any verification when posting personal stories and claims, and we *all* know it..... :-)

All amateur radio operators are required by circumstances to qualify
for an amateur radio license. Are you saying hams don't have to satisfy
any requirements? Hams have to satisfy the requirements, Dick. "Have to"
is another way of saying "forced".

> > The

One more time, Dick. Read it slowly this time. Amateur radio operators
are forced by the federal government to meet the requirements for
an amateur radio operator's license. That's what governments do.
Please list the names of any hams who were not forced by the FCC to
meet the requirements for entry into the amateur radio service. The
only people who are not required to meet those requirements are not
hams.

Source record: 4211

Hey, that was fun! Been a long time since I've participated in a CW "roundtable". We gotta do that again some time.

At 1010PM EST Feb 27 W3RV called the first session of the RRAP CW Net.

Checking in were;
W3RV Brian- NCS
W0EX Dick
AC6XG Jim
K0HB Hans
N2EY Jim
W6RCA Cecil

All signals were good in spite of considerable QRM and some QRN from early spring thunderstorms in the South. Cecil W6RCA reported thunderstorms in his area (southeast Texas), with sparks in the hamshack! That had to be noisy, and risky too. Gutsy guy, our Cecil. None of that for me!

Jim AC6XG initially was weak (549 here) and W6RCA wasn't able to copy through the storm static, but the skip distance on 40 meters changed and his signals improved (to 569 here) and all stations made direct contact with each other.

The same band change caused N2EY and W3RV (both in E.Pa.) to shift signal levels. Initially W3RV had been considerably stronger than N2EY but changing band conditions nearly reversed their signal levels as received in Missouri. That's a phenomena that occurrs on 40 meters when two close stations work a distant station and propagation shifts occur.

Anyone who thinks that "CW is dead" should have heard the clamor between 7035 and 7040, with a PACTOR signal occupying 7038-7040 for a time. I wondered for awhile, before the announced time, whether or not we would be able to find a free slot in the activity. Fortunately the PACTOR station left the air and we took that frequency.

Hey Jones, why didn't you check in??? <g>

And I don't understand what the sparks are all about. I have a set of knife switches mounted on a piece of plexiglas in my hamshack window. Those switches arc like crazy during a thunderstorm. During the roundtable, I could hear a flock of Canadian Geese flying around in the storm in the dark. The actual thunder was so loud it drowned out some of the signals.

That was my first CW net. I use a brickwall filter and everyone wasn't on the same frequency. I had to keep tuning everyone in which changed my TX frequency. How is that problem handled on real life nets?

One thing about double agents - they are never really trusted by the "other
side". If he had managed to escape to Russia, they would watch him very
carefully.

Never been required in this country at all. I find it admirable that hams build
things, that's all.
>
>You are trying to equate a personal situation with something
>not required in the USA.

I am simply stating that I don't say others should do what I have not done. I
think hams should build their own gear if possible. I have done so myself since
before I got a license. You seem to be bent on minimizing the accomplishments
of others.

>Bad equation.

Why? Is it "bad" to build radio equipment for one's own use?

> proposals by and of legal 11 meter interest groups/individuals.

It should be pointed out that groups other than the ARRL, or Ham Radio related organizations, often get involved with Ham Radio issues. It happens all the time. Whether it has to do with the desire to get more spectrum for a commercial application, or public agencies like the LA police looking for spectrum for aerial TV surveillance, and so on. Likewise the ARRL gets involved with issues such as Part 15 and Part 95 devices, whose operation, or future potential operation, poses an interference issue for Hams, and protecting our spectrum from intruders.

As far as the ARRL getting involved in the 11m band issues, it is nothing more than business as usual to watch out for the interest of Ham Radio. Let me refresh your memory a little bit, it was due to the use of linear amplifiers, illegally on the 11m band, that prompted the FCC to enact the rules which crippled or eliminated the commercial sale of any amplifier that will function over the range of 12m to 10m. Granted that most of those amplifiers never operated on the Ham bands by a CBer bootlegging, it never the less impacted the Ham Radio community. And this is an activity that occurs on the 11m band, almost exclusively for all practical purposes. The argument is valid because it DID affect the Ham Radio community, while to what degree is not really the point. Nor is it the point about how easy, or difficult, it is to modify the amplifier to restore the ability to function on those bands either.

That in a nut shell is why I think the ARRL has a legitimate interest in what goes on in the 11m band, even if the immediate view appears not to affect Ham Radio. It's like the nose of the camel in the tent. If you don't watch out, and act quick, you end up with the rest of the camel inside. Then it's too late.

I switched in my amp so Cecil could hear me. I heard everybody Q5. Had some QSB on the East coast stations. Hans was loudest. Lots of signals on the band. Somebody at 20 over came up a few hundred Hz above us and I've just got the stock filter in there right now. I ran the PBT all the way to the peg and got rid of him. I think I need Pa. so I'll QSL. I enjoyed hearing all the familiar calls checking in. Pretty neat. I'm the least experienced op in the group - and it probably showed a bit. Sorry if I was too long winded, guys. Anybody hear any gravel on my CW note?

RIT? ;-) I turned off my DSP so I wouldn't miss anybody, but I think we were probably all within 150-200 Hz or so of each other. The difference in offset from one rig to another can run that much.

Great job running the net, Brian. Thanks very much. I hope we give it another shot in the future. Forty worked great for us.

Well they wouldn't have to worry about trusting him with a ham
license. He certainly wouldn't use outdated CW to send secrets. He was
much more sophisticated than that... :-)

From Tucows PDA News:
Quoted: Hanssen allegedly tried to sell the Russians on using handheld
Palm VII organizers. According to the FBI affidavit, Hanssen wrote his
handlers, "we do need a better form of secure communication --
faster." "The VII version comes with wireless internet capability
built in," Hanssen allegedly wrote. "It can allow the rapid
transmission of encrypted messages, which if used on an infrequent
basis, could be quite effective in preventing confusions if the
existence [sic] of the accounts could be appropriately hidden as well
as the existance [sic] of the devices themselves. Such a device might
even serve for rapid transmittal of substantial material in digital
form."

>If you had not been required by circumstances to learn Morse code,
>you would not have learned it. My argument was (is) that hams
>will learn Morse code without it being required by the FCC.
>Remember?

Cecil:

The term "forced" implies an external influence. How can one be
"forced" to do something which he MUST volunteer to do of his own
accord? Nobody gives a rats ass whether or not I obtain or upgrade
a ham ticket. Therefore, nobody is "forcing" me to meet the
requirements. I do that strictly on my own volition, free of external
influence. That the requirement exists and must be achieved in order
to obtain the goal is a mere fact; it is not "force."

>You have admitted that you didn't like Morse code until you had
>forced yourself to learn it. It doesn't matter if you did that
>voluntarily or involuntarily. The result is the same either way.

Cecil:

If any force was applied to me to learn the Morse code, I applied
it to myself. I did, admittedly, disagree with the requirement at one
time. However, at that time I was looking at the situation through
the eyes of a selfish and immature individual. Once I grew out of
that particular mental state, and began to accept responsibility for
my own personal growth, I realized that the Morse learning/testing
requirement was valid, essential, and eminently practical. Not
surprisingly, it was at that time that I realized that nobody was
"forcing" me to take the Morse code tests. They became a rite of
passage which granted me entree into a worthwhile activity, and
as such, I was more than eager not only to meet these requirements,
but to excel at them. Go figure.

Damnit, Jim -- I'm an amateur, not a professional! This is a voluntary
hobby, and just because there are government regulations that must
be obeyed in order to practice this hobby, doesn't mean I'm being
forced to obey them. I do so voluntarily, gladly, willingly. I totally
agree with what little regulation still exists over this hobby -- I wish
there were more. Government does have a legitimate role, particularly
when managing finite, shared resources such as the radio spectrum.
For the government to de-regulate this hobby and give away full
privileges to as many people as want them with dumbed-down
licensing requirements doesn't make a bit of sense to me! So, with
all due respect, Jim -- "get real" yourself!

>
>Earth to Dick: Forcing their citizens to obey regulations is one
>of the things that governments do for a living.

Earth to Cecil:

I am "forced" (required be the presence of negative consequences) by
the government to pay my taxes. If I don't pay them, I can receive
stiff fines and even a jail sentence. That's quite a gun to my head -- and
to keep it from firing, I keep sending a totally unfair portion of my
income to the government every April 15th.

I am not "forced" (required by any damn thing whatsoever) to take a
Morse code test for an amateur radio license. If I choose not to do so,
there is no negative consequence, apart from simply not being granted
permission to do something that I could already live without doing.
Trust me, if I "choose" not to pay my taxes, the consequences are not
nearly as benign. I can't live very well without my freedom, or if I lose
my financial independance due to being "required by circumstances"
to pay heavy fines to the IRS.

For there to be "force," there has to be some sort of gun to your head.
Not being granted a ham radio license isn't even a straw with a spit-ball
in it.

Whining no-coders won't be satisfied until the code testing
requirements are eliminated.

The present code testing requirements are dumbed-down to
insignificance, and now, Cecil is satisfied with them. I'm sure
that when they are totally eliminated, he will be even more
satisified with the "code requirements."

Cecil is just another whining no-coder.

Cecil: Type your way out of that one, logic boy!

1990 wasn't soon enough? Why not?

Besides, in 3 years or so we probably won't have ANY Morse code exams.

What about Texas liberals? They're the worst, by far. Remember that it was a Texas liberal (LBJ) who got us mired in Vietnam, started the whole US welfare state setup with his "Great Society" programs, and funded the whole mess with deficits. And all the while the real problems of society (like overdependence on foreign energy, and an aging industrial infrastructure) were ignored, setting the stage for the staglfation of the 1970s and the huge national debt that we are only now beginning to pay off.

LBJ was so awful he makes Richard Nixon look good.

Because a competent ham who got his technician license in the 50s,
who has an engineering degree, who had a commercial radio license,
who for years was chief engineer at an AM broadcast station, and
who tried for hundreds of hours to get his code speed up to 13wpm,
was not allowed reasonable privileges on HF ham bands until the 90s.

Here's Larry logic in action:
Cecil is satisfied with the present requirements.
Whining no-coders are not satisfied with the present requirements.
Therefore: Cecil is a whining no coder.

Why am I not surprised at your continued use of invalid logic?

> Cecil: Type your way out of that one, logic boy!

I just did, Larry, where were you when we had the r.r.a.p
CW net last night? Does joining a CW net in the middle of
a severe lightning storm sound like a no-coder to you?

Depends on how and how much they are reduced. For instance,
I don't see much utility in requiring the examinee to know,
off the top of his head, the answer to the following:

"What should be the approximate capacitance of the resonating
capacitor in a gamma matching circuit on a 1/2WL dipole antenna
for the 20-meter wavelength band?"

Then you are admitting, as you have previously admitted, that you
were required by circumstances (at the FCC), to learn Morse code.
"Required by circumstances" is the dictionary definition of forced.

> ... it was at that time that I realized that nobody was
> "forcing" me to take the Morse code tests.

It was at that time that you figured out how to rationalize the
requirements. Governments create and enforce requirements.
That's what governments do.

Here's a little logic exercise for you. Take a piece of paper and
draw a circle. Label that circle, "the set of all US HF hams".
Now how many individuals in that set were not required by
circumstances to pass a Morse code exam? "Required by circumstances"
is the dictionary definition of "forced". Larry, ALL US HF hams,
including you, were required by circumstances to pass a Morse code
exam. Only people outside the circle are not required by circumstances
to pass a Morse code exam.

It is irrelevant how you feel about the regulations. The truth is
that you, as a licensed amateur radio operator are forced to
obey the regulations. If you don't believe that, please try
contacting the foreign hams in the US CW/digital portion of
40m. See how long it is until you are forced to obey the
regulations.

Taxes are what you pay for the privilege of living in this country.
Morse code tests are the "taxes" you pay for the privilege of being
a US HF amateur radio operator. All US HF amateur radio operators have
been required by circumstances to pass a Morse code exam. You are
a US HF amateur radio operator. Therefore, you were required by
circumstances to pass a Morse code exam. How you feel about being
forced is irrelevant. Is this a case of relax and enjoy it and
then it's not rape?

> If I choose not to do so,
> there is no negative consequence, apart from simply not being granted

There is no way a US HF amateur radio operator can choose not to take
a Morse code exam. Obviously, there is no way you can change your
mind and not have taken a Morse code exam.

> For there to be "force," there has to be some sort of gun to your head.

That's a false statement according to Webster's dictionary. Even your
cheap dictionary says: "forced - produced with effort". You have already
admitted that your Morse code skill was "produced with effort". Therefore,
your Morse code skill was "forced".

So you seem to be admitting that you cannot refute my logical argument.
It doesn't matter what you feel, Larry. Your feelings are irrelevant.
What is relevant is the dictionary definition of "forced". You met that
definition of "forced" when you took your Morse code exam. I'm sorry
that facts upset you, Larry, but you getting upset and denying reality
is irrelevant.

> "A closed mind that believes in free will?"

A closed mind that believes in free will is predestined to believe
in free will and has no choice in the matter. Only an open mind that
questions the existence of predestination VS free will is actually
open.

I agree, Jim. I wish LBJ had not been a Texan. There's
a historical pocket of corruption down around Duval and
Jim Wells Counties. When LBJ went to Congress, dead
people had voted for him and lots votes were cast for
him in alphabetical order. LBJ and Clinton were out of
somewhat the same mold. Anything goes as long as they
don't get caught.

Although I didn't listen to the net, I'll wager that none of you folks called each other a name, said a cross word, or ran each other down during this QSO/Net. Why was that? You folks often do one or more of those things to each other here on rrap. Is this the gentleman's effect of the CW mode at work??

> Hey, that was fun! Been a long time since I've participated in a CW
